Chapter 1

Introduction

Over the last few decades, researchers have expended significant effort on developing efficient iterative methods for solving discretized partial differential equations (PDEs). Though these efforts have yielded many mathematically optimal solvers such as the multigrid method, the unfortunate reality is that multigrid methods have not been much used in practical applications. This marked gap between theory and practice is mainly due to the fragility of traditional multigrid (MG) methodology and the complexity of its implementation. We aim to develop techniques and the corresponding software that will narrow this gap, specifically by developing mathematically optimal solvers that are robust and easy to use in practice.

We believe that there is no one-size-for-all solution method for discrete linear systems from different applications. And, efficient iterative solvers can be constructed by taking the properties of PDEs and discretizations into account. In this project, we plan to construct a pool of discrete problems arising from partial differential equations (PDEs) or PDE systems and efficient linear solvers for these problems. We mainly utilize the methodology of Auxiliary Space Preconditioning (ASP) to construct efficient linear solvers. Due to this reason, this software package is called Fast Auxiliary Space Preconditioning or FASP for short.

FASP contains the kernel part and several applications (ranging from fluid dynamics to reservoir simulation). The kernel part is open-source and licensed under GNU Lesser General Public License or LGPL version 3.0 or later. Some of the applications contain contributions from and owned partially by other parties.

For the moment, FASP is under alpha testing. If you wish to obtain a current version of FASP or you have any questions, feel free to contact us at faspdev@gmail.com.

This software distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

Chapter 2

How to obtain FASP

The most updated version of FASP can be downloaded from

<http://fasp.sourceforge.net/download/faspsolver.zip>

We use HG (Mercurial) as our main version control tool. HG is easy to use and it is available at all OS platforms. For people who is interested in the developer version, you can obtain the FASP package with hg:

```
$ hg clone https://faspusers@bitbucket.org/fasp/faspsolver
```

will give you the developer version of the FASP package.

Chapter 3

Building and Installation

This is a simple instruction on building and testing. For more details, please refer to the README files and the short [User's Guide](#) in "faspolver/doc/".

To compile, you need a Fortran and a C compiler. First, you can type in the "faspolver/" root directory:

```
$ make config
```

which will config the environment automatically. And, then, you can need to type:

```
$ make install
```

which will make the FASP shared static library and install to PREFIX/. By default, FASP libraries and executables will be installed in the FASP home directory "faspolver/".

There is a simple GUI tool for building and installing FASP included in the package. You need Tcl/Tk support in your computer. You may call this GUI by run in the root directory:

```
$ wish fasp_install.tcl
```

If you need to see the detailed usage of "make" or need any help, please type:

```
$ make help
```

After installation, tutorial examples can be found in "tutorial/".

Chapter 4

Developers

Project leader:

- Xu, Jinchao (Penn State University, USA)

Project coordinator:

- Zhang, Chensong (Chinese Academy of Sciences, China)

Current active developers (in alphabetic order):

- Feng, Chunsheng (Xiangtan University, China)
- Hu, Xiaozhe (Tufts University, USA)
- Li, Zheng (Kunming University of Science and Technology, China)
- Zhang, Chensong (Chinese Academy of Sciences, China)
- Zhang, Hongxuan (Penn State University, USA)
- Zikatanov, Ludmil (Penn State University, USA)

With contributions from (in alphabetic order):

- Brannick, James (Penn State University, USA)
- Chen, Long (University of California, Irvine, USA)
- Huang, Feiteng (Sichuan University, China)
- Huang, Xuehai (Shanghai Jiaotong University, China)
- Qiao, Changhe (Penn State University, USA)
- Shu, Shi (Xiangtan University, China)
- Sun, Pengtao (University of Nevada, Las Vegas, USA)
- Yang, Kai (Penn State University, USA)
- Yue, Xiaoqiang (Xiangtan University, China)

- Wang, Lu (LLNL, USA)
- Wang, Ziteng (University of Alabama, USA)
- Zhang, Shiquan (Sichuan University, China)
- Zhang, Shuo (Chinese Academy of Sciences, China)
- Zhang, Weifeng (Kunming University of Science and Technology, China)
- Zhou, Zhiyang (Xiangtan University, China)

Chapter 5

Doxygen

We use Doxygen as our automatically documentation generator which will make our future maintainance minimized. You can obtain the software (Windows, Linux and OS X) as well as its manual on the official website

<http://www.doxygen.org>

For an ordinary user, Doxygen is completely trivial to use. We only need to use some special marker in the usual comment as we put in c-files.

Data Structure Index

7.1 Data Structures

Here are the data structures with brief descriptions:

AMG_data	Data for AMG solvers	23
AMG_data_bsr	Data for multigrid levels. (BSR format)	24
AMG_param	Parameters for AMG solver	26
block_BSR	Block REAL matrix format for reservoir simulation	28
block_dCSRmat	Block REAL CSR matrix format	28
block_dvector	Block REAL vector structure	29
block_iCSRmat	Block INT CSR matrix format	29
block_ivector	Block INT vector structure	30
block_Reservoir	Block REAL matrix format for reservoir simulation	31
dBSRmat	Block sparse row storage matrix of REAL type	31
dCOOmat	Sparse matrix of REAL type in COO (or IJ) format	32
dCSRLmat	Sparse matrix of REAL type in CSRL format	33
dCSRmat	Sparse matrix of REAL type in CSR format	34
ddenmat	Dense matrix of REAL type	34
dSTRmat	Structure matrix of REAL type	35
dvector	Vector with n entries of REAL type	36
grid2d	Two dimensional grid data structure	36

iCOOmat	Sparse matrix of INT type in COO (or IJ) format	38
iCSRmat	Sparse matrix of INT type in CSR format	39
idenmat	Dense matrix of INT type	40
ILU_data	Data for ILU setup	40
ILU_param	Parameters for ILU	41
input_param	Input parameters	42
itsolver_param	Parameters passed to iterative solvers	49
ivector	Vector with n entries of INT type	50
Link	Struct for Links	51
linked_list	A linked list node	51
mallinfo	52
malloc_chunk	52
malloc_params	53
malloc_segment	53
malloc_state	53
malloc_tree_chunk	54
Mumps_data	Parameters for MUMPS interface	55
mxv_matfree	Matrix-vector multiplication, replace the actual matrix	55
nedmallinfo	55
precond	Preconditioner data and action	56
precond_block_data	Data passed to the preconditioner for block preconditioning for block_dCSRmat format	56
precond_block_reservoir_data	Data passed to the preconditioner for reservoir simulation problems	58
precond_data	Data passed to the preconditioners	61
precond_data_bsr	Data passed to the preconditioners	63
precond_data_str	Data passed to the preconditioner for dSTRmat matrices	64
precond_diagbsr	Data passed to diagonal preconditioner for dBSRmat matrices	66
precond_diagstr	Data passed to diagonal preconditioner for dSTRmat matrices	66
precond_FASP_blkoi_data	Data passed to the preconditioner for preconditioning reservoir simulation problems	67
precond_sweeping_data	Data passed to the preconditioner for sweeping preconditioning	71
Schwarz_data	Data for Schwarz methods	73

[Schwarz_param](#)

Parameters for Schwarz method	74
---	----

Chapter 8

File Index

8.1 File List

Here is a list of all documented files with brief descriptions:

amg.c	AMG method as an iterative solver (main file)	77
amg_setup_cr.c	Brannick-Falgout compatible relaxation based AMG: SETUP phase	78
amg_setup_rs.c	Ruge-Stuben AMG: SETUP phase	79
amg_setup_sa.c	Smoothed aggregation AMG: SETUP phase	80
amg_setup_ua.c	Unsmoothed aggregation AMG: SETUP phase	82
amg_solve.c	Algebraic multigrid iterations: SOLVE phase	84
amlirecur.c	Abstract AMLI multilevel iteration – recursive version	87
array.c	Simple array operations – init, set, copy, etc	90
blas_array.c	BLAS1 operations for arrays	94
blas_bcsr.c	BLAS2 operations for block_dCSRmat matrices	99
blas_bsr.c	BLAS2 operations for dBSRmat matrices	101
blas_csr.c	BLAS2 operations for dCSRmat matrices	108
blas_csrl.c	BLAS2 operations for dCSRLmat matrices	117
blas_smat.c	BLAS2 operations for <i>small</i> dense matrices	118
blas_str.c	BLAS2 operations for dSTRmat matrices	138
blas_vec.c	BLAS1 operations for vectors	140
checkmat.c	Check matrix properties	144

coarsening_cr.c	
Coarsening with Brannick-Falgout strategy	149
coarsening_rs.c	
Coarsening with a modified Ruge-Stuben strategy	150
convert.c	
Some utilities for format conversion	152
dlmalloc.h	??
doxygen.h	
Main page for Doxygen documentation	156
eigen.c	
Subroutines for computing the extreme eigenvalues	156
famg.c	
Full AMG method as an iterative solver (main file)	157
fasp.h	
Main header file for FASP	158
fasp_block.h	
Header file for FASP block matrices	166
fasp_const.h	
Definition of all kinds of messages, including error messages, solver types, etc	169
fmgcycle.c	
Abstract non-recursive full multigrid cycle	188
formats.c	
Subroutines for matrix format conversion	189
givens.c	
Givens transformation	194
gmw_poisson.c	
GMG method as an iterative solver for Poisson Problem	195
graphics.c	
Subroutines for graphical output	202
hb_io.h	??
ilu_setup_bsr.c	
Setup incomplete LU decomposition for dBSRmat matrices	205
ilu_setup_csr.c	
Setup incomplete LU decomposition for dCSRmat matrices	206
ilu_setup_str.c	
Setup incomplete LU decomposition for dSTRmat matrices	207
init.c	
Initialize important data structures	208
input.c	
Read input parameters	213
interface_mumps.c	
Interface to MUMPS direct solvers	214
interface_samg.c	
Interface to SAMG solvers	216
interface_superlu.c	
Interface to SuperLU direct solvers	217
interface_umfpack.c	
Interface to UMFPACK direct solvers	218
interpolation.c	
Interpolation operators for AMG	219
interpolation_em.c	
Interpolation operators for AMG based on energy-min	221
io.c	
Matrix/vector input/output subroutines	222

itsolver_bcsr.c	
Iterative solvers for block_dCSRmat matrices	243
itsolver_bsr.c	
Iterative solvers for dBSRmat matrices	247
itsolver_csr.c	
Iterative solvers for dCSRmat matrices	251
itsolver_mf.c	
Iterative solvers using matrix-free spmv operations	257
itsolver_str.c	
Iterative solvers for dSTRmat matrices	260
lu.c	
LU decomposition and direct solver for small dense matrices	264
malloc.c.h	??
memory.c	
Memory allocation and deallocation subroutines	266
message.c	
Output some useful messages	270
mgcycle.c	
Abstract multigrid cycle – non-recursive version	273
mgrecur.c	
Abstract multigrid cycle – recursive version	274
nedmalloc.h	??
ordering.c	
Subroutines for ordering, merging, removing duplicated integers	275
parameters.c	
Initialize, set, or print input data and parameters	281
pbcgs.c	
Krylov subspace methods – Preconditioned BiCGstab	290
pbcgs_mf.c	
Krylov subspace methods – Preconditioned BiCGstab (matrix free)	294
pcg.c	
Krylov subspace methods – Preconditioned conjugate gradient	296
pcg_mf.c	
Krylov subspace methods – Preconditioned conjugate gradient (matrix free)	302
pgcg.c	
Krylov subspace methods – Preconditioned Generalized CG	304
pgcg_mf.c	
Krylov subspace methods – Preconditioned Generalized CG (matrix free)	305
pgcr.c	
Krylov subspace methods – Preconditioned GCR	306
pgmres.c	
Krylov subspace methods – Right-preconditioned GMRes	309
pgmres_mf.c	
Krylov subspace methods – Preconditioned GMRes (matrix free)	312
pminres.c	
Krylov subspace methods – Preconditioned minimal residual	313
pminres_mf.c	
Krylov subspace methods – Preconditioned minimal residual (matrix free)	317
precond_bcsr.c	
Preconditioners for block_dCSRmat matrices	319
precond_bsr.c	
Preconditioners for dBSRmat matrices	327
precond_csr.c	
Preconditioners for dCSRmat matrices	334

precond_str.c	Preconditioners for dSTRmat matrices	340
pvfgmres.c	Krylov subspace methods – Preconditioned variable-restarting flexible GMRes	345
pvfgmres_mf.c	Krylov subspace methods – Preconditioned variable-restarting flexible GMRes (matrix free)	347
pvgmres.c	Krylov subspace methods – Preconditioned variable-restart GMRes	349
pvgmres_mf.c	Krylov subspace methods – Preconditioned variable-restarting GMRes (matrix free)	353
quadrature.c	Quadrature rules	354
rap.c	Tripple-matrix multiplication $R \cdot A \cdot P$	355
schwarz_setup.c	Setup phase for the Schwarz methods	356
smat.c	Simple operations for <i>small</i> dense matrices in row-major format	359
smoother_bsr.c	Smoothers for dBSRmat matrices	366
smoother_csr.c	Smoothers for dCSRmat matrices	376
smoother_csr_cr.c	Smoothers for dCSRmat matrices using compatible relaxation	382
smoother_csr_poly.c	Smoothers for dCSRmat matrices using poly. approx. to A^{-1}	383
smoother_str.c	Smoothers for dSTRmat matrices	384
sparse_block.c	Sparse matrix block operations	393
sparse_bsr.c	Sparse matrix operations for dBSRmat matrices	397
sparse_coo.c	Sparse matrix operations for dCOOmat matrices	405
sparse_csr.c	Sparse matrix operations for dCSRmat matrices	407
sparse_csrl.c	Sparse matrix operations for dCSRLmat matrices	421
sparse_str.c	Sparse matrix operations for dSTRmat matrices	422
sparse_util.c	Routines for sparse matrix operations	426
spbcgs.c	Krylov subspace methods – Preconditioned BiCGstab with safety net	433
spcg.c	Krylov subspace methods – Preconditioned conjugate gradient with safety net	438
spgmres.c	Krylov subspace methods – Preconditioned GMRes with safety net	442
spminres.c	Krylov subspace methods – Preconditioned minimal residual with safety net	446
spvgmres.c	Krylov subspace methods – Preconditioned variable-restart GMRes with safety net	450
threads.c	Get and set number of threads and assign work load for each thread	453

timing.c	Timing subroutines	455
vec.c	Simple operations for vectors	456
wrapper.c	Wrappers for accessing functions by advanced users	464

Chapter 9

Data Structure Documentation

9.1 AMG_data Struct Reference

Data for AMG solvers.

```
#include <fasp.h>
```

Data Fields

- [SHORT max_levels](#)
max number of levels
- [SHORT num_levels](#)
number of levels in use \leq max_levels
- [dCSRmat A](#)
pointer to the matrix at level level_num
- [dCSRmat R](#)
restriction operator at level level_num
- [dCSRmat P](#)
prolongation operator at level level_num
- [dvector b](#)
pointer to the right-hand side at level level_num
- [dvector x](#)
pointer to the iterative solution at level level_num
- `void *` [Numeric](#)
pointer to the numerical factorization from UMFPACK
- [ivector cfmark](#)
pointer to the CF marker at level level_num
- [INT ILU_levels](#)
number of levels use ILU smoother
- [ILU_data LU](#)
ILU matrix for ILU smoother.
- [INT near_kernel_dim](#)
dimension of the near kernel for SAMG
- [REAL ** near_kernel_basis](#)

- *basis of near kernel space for SAMG*
- [INT Schwarz_levels](#)
number of levels use Schwarz smoother
- [Schwarz_data Schwarz](#)
data of Schwarz smoother
- [dvector w](#)
Temporary work space.
- [Mumps_data mumps](#)
data for MUMPS
- [INT cycle_type](#)
cycle type

9.1.1 Detailed Description

Data for AMG solvers.

Note

This is needed for the AMG solver/preconditioner.

Definition at line 687 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.2 AMG_data_bsr Struct Reference

Data for multigrid levels. (BSR format)

```
#include <fasp_block.h>
```

Data Fields

- [INT max_levels](#)
max number of levels
- [INT num_levels](#)
number of levels in use <= max_levels
- [dBSRmat A](#)
pointer to the matrix at level level_num
- [dBSRmat R](#)
restriction operator at level level_num
- [dBSRmat P](#)
prolongation operator at level level_num
- [dvector b](#)
pointer to the right-hand side at level level_num
- [dvector x](#)
pointer to the iterative solution at level level_num

- [dvector diainv](#)
pointer to the diagonal inverse at level level_num
- [dCSRmat Ac](#)
pointer to the matrix at level level_num (csr format)
- `void * Numeric`
pointer to the numerical dactorization from UMFPACK
- [dCSRmat PP](#)
pointer to the pressure block (only for reservoir simulation)
- `REAL * pw`
pointer to the auxiliary vectors for pressure block
- [dBSRmat SS](#)
pointer to the saturation block (only for reservoir simulation)
- `REAL * sw`
pointer to the auxiliary vectors for saturation block
- [dvector diainv_SS](#)
pointer to the diagonal inverse of the saturation block at level level_num
- [ILU_data PP_LU](#)
ILU data for pressure block.
- [ivector cfmark](#)
pointer to the CF marker at level level_num
- [INT ILU_levels](#)
number of levels use ILU smoother
- [ILU_data LU](#)
ILU matrix for ILU smoother.
- [INT near_kernel_dim](#)
dimension of the near kernel for SAMG
- `REAL ** near_kernel_basis`
basis of near kernel space for SAMG
- `dCSRmat * A_nk`
Matrix data for near kernal.
- `dCSRmat * P_nk`
Prolongation for near kernal.
- `dCSRmat * R_nk`
Resriction for near kernal.
- [dvector w](#)
temporary work space
- [Mumps_data mumps](#)
data for MUMPS

9.2.1 Detailed Description

Data for multigrid levels. (BSR format)

Note

This structure is needed for the AMG solver/preconditioner in BSR format

Definition at line 198 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.3 AMG_param Struct Reference

Parameters for AMG solver.

```
#include <fasp.h>
```

Data Fields

- [SHORT AMG_type](#)
type of AMG method
- [SHORT print_level](#)
print level for AMG
- [INT maxit](#)
max number of iterations of AMG
- [REAL tol](#)
stopping tolerance for AMG solver
- [SHORT max_levels](#)
max number of levels of AMG
- [INT coarse_dof](#)
max number of coarsest level DOF
- [SHORT cycle_type](#)
type of AMG cycle
- [REAL quality_bound](#)
quality threshold for pairwise aggregation
- [SHORT smoother](#)
smoother type
- [SHORT smooth_order](#)
smoother order
- [SHORT presmooth_iter](#)
number of presmoothers
- [SHORT postsmooth_iter](#)
number of postsmoothers
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT polynomial_degree](#)
degree of the polynomial smoother
- [SHORT coarse_solver](#)
coarse solver type
- [SHORT coarse_scaling](#)
switch of scaling of the coarse grid correction
- [SHORT amli_degree](#)
degree of the polynomial used by AMLI cycle
- [REAL * amli_coef](#)
coefficients of the polynomial used by AMLI cycle
- [SHORT nl_amli_krylov_type](#)
type of Krylov method used by Nonlinear AMLI cycle
- [SHORT coarsening_type](#)

- coarsening type*
- [SHORT aggregation_type](#)
aggregation type
- [SHORT interpolation_type](#)
interpolation type
- [REAL strong_threshold](#)
strong connection threshold for coarsening
- [REAL max_row_sum](#)
maximal row sum parameter
- [REAL truncation_threshold](#)
truncation threshold
- [INT aggressive_level](#)
number of levels use aggressive coarsening
- [INT aggressive_path](#)
number of paths use to determine strongly coupled C points
- [INT pair_number](#)
number of pairwise matchings
- [REAL strong_coupled](#)
strong coupled threshold for aggregate
- [INT max_aggregation](#)
max size of each aggregate
- [REAL tentative_smooth](#)
relaxation parameter for smoothing the tentative prolongation
- [SHORT smooth_filter](#)
switch for filtered matrix used for smoothing the tentative prolongation
- [SHORT ILU_levels](#)
number of levels use ILU smoother
- [SHORT ILU_type](#)
ILU type for smoothing.
- [INT ILU_lfil](#)
level of fill-in for ILUs and ILUK
- [REAL ILU_droptol](#)
drop tolerance for ILUt
- [REAL ILU_relax](#)
relaxation for ILUs
- [REAL ILU_permtol](#)
*permuted if $\text{permtol} * |a(i,j)| > |a(i,i)|$*
- [INT Schwarz_levels](#)
number of levels use Schwarz smoother
- [INT Schwarz_mmsize](#)
maximal block size
- [INT Schwarz_maxlvl](#)
maximal levels
- [INT Schwarz_type](#)
type of Schwarz method
- [INT Schwarz_blksolver](#)
type of Schwarz block solver

9.3.1 Detailed Description

Parameters for AMG solver.

Note

This is needed for the AMG solver/preconditioner.

Definition at line 548 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.4 block_BSR Struct Reference

Block REAL matrix format for reservoir simulation.

```
#include <fasp_block.h>
```

Data Fields

- [dBSRmat ResRes](#)
reservoir-reservoir block
- [dCSRmat ResWel](#)
reservoir-well block
- [dCSRmat WelRes](#)
well-reservoir block
- [dCSRmat WelWel](#)
well-well block

9.4.1 Detailed Description

Block REAL matrix format for reservoir simulation.

Definition at line 172 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.5 block_dCSRmat Struct Reference

Block REAL CSR matrix format.

```
#include <fasp_block.h>
```

Data Fields

- [INT brow](#)
row number of blocks in A, m
- [INT bcol](#)
column number of blocks A, n
- [dCSRmat](#) ** [blocks](#)
blocks of [dCSRmat](#), point to blocks[brow][bcol]

9.5.1 Detailed Description

Block REAL CSR matrix format.

Note

The starting index of A is 0.

Definition at line 84 of file `fasp_block.h`.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.6 block_dvector Struct Reference

Block REAL vector structure.

```
#include <fasp_block.h>
```

Data Fields

- [INT brow](#)
row number of blocks in A, m
- [dvector](#) ** [blocks](#)
blocks of dvector, point to blocks[brow]

9.6.1 Detailed Description

Block REAL vector structure.

Definition at line 120 of file `fasp_block.h`.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.7 block_iCSRmat Struct Reference

Block INT CSR matrix format.

```
#include <fasp_block.h>
```

Data Fields

- [INT brow](#)
row number of blocks in A, m
- [INT bcol](#)
column number of blocks A, n
- [iCSRmat](#) ** [blocks](#)
blocks of [iCSRmat](#), point to blocks[brow][bcol]

9.7.1 Detailed Description

Block INT CSR matrix format.

Note

The starting index of A is 0.

Definition at line 103 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.8 block_ivector Struct Reference

Block INT vector structure.

```
#include <fasp_block.h>
```

Data Fields

- [INT brow](#)
row number of blocks in A, m
- [ivector](#) ** [blocks](#)
blocks of dvector, point to blocks[brow]

9.8.1 Detailed Description

Block INT vector structure.

Note

The starting index of A is 0.

Definition at line 136 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.9 block_Reservoir Struct Reference

Block REAL matrix format for reservoir simulation.

```
#include <fasp_block.h>
```

Data Fields

- [dSTRmat ResRes](#)
reservoir-reservoir block
- [dCSRmat ResWel](#)
reservoir-well block
- [dCSRmat WelRes](#)
well-reservoir block
- [dCSRmat WelWel](#)
well-well block

9.9.1 Detailed Description

Block REAL matrix format for reservoir simulation.

Definition at line 151 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.10 dBSRmat Struct Reference

Block sparse row storage matrix of REAL type.

```
#include <fasp_block.h>
```

Data Fields

- [INT ROW](#)
number of rows of sub-blocks in matrix A, M
- [INT COL](#)
number of cols of sub-blocks in matrix A, N
- [INT NNZ](#)
number of nonzero sub-blocks in matrix A, NNZ
- [INT nb](#)
dimension of each sub-block
- [INT storage_manner](#)
storage manner for each sub-block
- [REAL * val](#)
- [INT * IA](#)
integer array of row pointers, the size is ROW+1
- [INT * JA](#)

9.10.1 Detailed Description

Block sparse row storage matrix of REAL type.

Note

This data structure is adapted from the Intel MKL library. Refer to: <http://software.intel.com/sites/products/documentation/hpc/mkl/lin/index.htm>
Some of the following entries are capitalized to stress that they are for blocks!

Definition at line 44 of file fasp_block.h.

9.10.2 Field Documentation

9.10.2.1 INT* JA

Element i of the integer array columns is the number of the column in the block matrix that contains the i -th non-zero block. The size is NNZ.

Definition at line 74 of file fasp_block.h.

9.10.2.2 REAL* val

A real array that contains the elements of the non-zero blocks of a sparse matrix. The elements are stored block-by-block in row major order. A non-zero block is the block that contains at least one non-zero element. All elements of non-zero blocks are stored, even if some of them is equal to zero. Within each nonzero block elements are stored in row-major order and the size is $(NNZ * nb * nb)$.

Definition at line 67 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.11 dCOOmat Struct Reference

Sparse matrix of REAL type in COO (or IJ) format.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
row number of matrix A, m
- [INT col](#)
column of matrix A, n
- [INT nnz](#)
number of nonzero entries
- [INT * rowind](#)
integer array of row indices, the size is nnz
- [INT * colind](#)

integer array of column indices, the size is nnz

- [REAL * val](#)

nonzero entries of A

9.11.1 Detailed Description

Sparse matrix of REAL type in COO (or IJ) format.

Coordinate Format (I,J,A)

Note

The starting index of A is 0.

Change I to rowind, J to colind. To avoid with complex.h confliction on I.

Definition at line 202 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.12 dCSRLmat Struct Reference

Sparse matrix of REAL type in CSRL format.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
number of rows
- [INT col](#)
number of cols
- [INT nnz](#)
number of nonzero entries
- [INT dif](#)
number of different values in i-th row, i=0:nrows-1
- [INT * nz_diff](#)
nz_diff[i]: the i-th different value in 'nzrow'
- [INT * index](#)
row index of the matrix (length-grouped): rows with same nnz are together
- [INT * start](#)
j in {start[i],...,start[i+1]-1} means nz_diff[i] nnz in index[j]-row
- [INT * ja](#)
column indices of all the nonzeros
- [REAL * val](#)
values of all the nonzero entries

9.12.1 Detailed Description

Sparse matrix of REAL type in CSRL format.

Definition at line 258 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.13 dCSRmat Struct Reference

Sparse matrix of REAL type in CSR format.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
row number of matrix A, m
- [INT col](#)
column of matrix A, n
- [INT nnz](#)
number of nonzero entries
- [INT * IA](#)
integer array of row pointers, the size is m+1
- [INT * JA](#)
integer array of column indexes, the size is nnz
- [REAL * val](#)
nonzero entries of A

9.13.1 Detailed Description

Sparse matrix of REAL type in CSR format.

CSR Format (IA,JA,A) in REAL

Note

The starting index of A is 0.

Definition at line 141 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.14 ddenmat Struct Reference

Dense matrix of REAL type.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
number of rows
- [INT col](#)
number of columns
- [REAL ** val](#)
actual matrix entries

9.14.1 Detailed Description

Dense matrix of REAL type.

A dense REAL matrix

Definition at line 101 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.15 dSTRmat Struct Reference

Structure matrix of REAL type.

```
#include <fasp.h>
```

Data Fields

- [INT nx](#)
number of grids in x direction
- [INT ny](#)
number of grids in y direction
- [INT nz](#)
number of grids in z direction
- [INT nxy](#)
number of grids on x-y plane
- [INT nc](#)
size of each block (number of components)
- [INT ngrid](#)
number of grids
- [REAL * diag](#)
diagonal entries (length is ngrid(nc^2))*
- [INT nband](#)
number of off-diag bands
- [INT * offsets](#)
offsets of the off-diagonals (length is nband)
- [REAL ** offdiag](#)
*off-diagonal entries (dimension is nband * [(ngrid-|offsets|) * nc^2])*

9.15.1 Detailed Description

Structure matrix of REAL type.

Note

Every nc^2 entries of the array `diag` and `off-diag[i]` store one block: For 2D matrix, the recommended offsets is `[-1,1,-nx,nx]`; For 3D matrix, the recommended offsets is `[-1,1,-nx,nx,-nxy,nxy]`.

Definition at line 297 of file `fasp.h`.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.16 dvector Struct Reference

Vector with `n` entries of REAL type.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
number of rows
- [REAL * val](#)
actual vector entries

9.16.1 Detailed Description

Vector with `n` entries of REAL type.

Definition at line 335 of file `fasp.h`.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.17 grid2d Struct Reference

Two dimensional grid data structure.

```
#include <fasp.h>
```

Data Fields

- [REAL\(* p\)\[2\]](#)
- [INT\(* e\)\[2\]](#)
- [INT\(* t\)\[3\]](#)
- [INT\(* s\)\[3\]](#)

- [INT * pdir](#)
- [INT * edir](#)
- [INT * pfather](#)
- [INT * efather](#)
- [INT * tfather](#)
- [INT vertices](#)
- [INT edges](#)
- [INT triangles](#)

9.17.1 Detailed Description

Two dimensional grid data structure.

Note

The [grid2d](#) structure is simply a list of triangles, edges and vertices. edge i has 2 vertices $e[i]$, triangle i has 3 edges $s[i]$, 3 vertices $t[i]$ vertex i has two coordinates $p[i]$

Definition at line 1089 of file fasp.h.

9.17.2 Field Documentation

9.17.2.1 [INT\(* e\)\[2\]](#)

Vertices of edges

Definition at line 1092 of file fasp.h.

9.17.2.2 [INT edges](#)

Number of edges

Definition at line 1103 of file fasp.h.

9.17.2.3 [INT* edir](#)

Boundary flags (0 <=> interior edge)

Definition at line 1096 of file fasp.h.

9.17.2.4 [INT* efather](#)

Father edge or triangle

Definition at line 1099 of file fasp.h.

9.17.2.5 [REAL\(* p\)\[2\]](#)

Coordinates of vertices

Definition at line 1091 of file fasp.h.

9.17.2.6 `INT* pdiri`

Boundary flags (0 <=> interior point)

Definition at line 1095 of file fasp.h.

9.17.2.7 `INT* pfather`

Father point or edge

Definition at line 1098 of file fasp.h.

9.17.2.8 `INT(* s)[3]`

Edges of triangles

Definition at line 1094 of file fasp.h.

9.17.2.9 `INT(* t)[3]`

Vertices of triangles

Definition at line 1093 of file fasp.h.

9.17.2.10 `INT* tfather`

Father triangle

Definition at line 1100 of file fasp.h.

9.17.2.11 `INT triangles`

Number of triangles

Definition at line 1104 of file fasp.h.

9.17.2.12 `INT vertices`

Number of grid points

Definition at line 1102 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.18 iCOOmat Struct Reference

Sparse matrix of INT type in COO (or IJ) format.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
row number of matrix A, m
- [INT col](#)
column of matrix A, n
- [INT nnz](#)
number of nonzero entries
- [INT * I](#)
integer array of row indices, the size is nnz
- [INT * J](#)
integer array of column indices, the size is nnz
- [INT * val](#)
nonzero entries of A

9.18.1 Detailed Description

Sparse matrix of INT type in COO (or IJ) format.

Coordinate Format (I,J,A)

Note

The starting index of A is 0.

Definition at line 232 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.19 iCSRmat Struct Reference

Sparse matrix of INT type in CSR format.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
row number of matrix A, m
- [INT col](#)
column of matrix A, n
- [INT nnz](#)
number of nonzero entries
- [INT * IA](#)
integer array of row pointers, the size is m+1
- [INT * JA](#)
integer array of column indexes, the size is nnz
- [INT * val](#)
nonzero entries of A

9.19.1 Detailed Description

Sparse matrix of INT type in CSR format.

CSR Format (IA,JA,A) in integer

Note

The starting index of A is 0.

Definition at line 171 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.20 idenmat Struct Reference

Dense matrix of INT type.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
number of rows
- [INT col](#)
number of columns
- [INT ** val](#)
actual matrix entries

9.20.1 Detailed Description

Dense matrix of INT type.

A dense INT matrix

Definition at line 120 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.21 ILU_data Struct Reference

Data for ILU setup.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
row number of matrix LU, m
- [INT col](#)
column of matrix LU, n
- [INT nzlu](#)
number of nonzero entries
- [INT * ijl](#)
integer array of row pointers and column indexes, the size is nzlu
- [REAL * luval](#)
nonzero entries of LU
- [INT nb](#)
block size for BSR type only
- [INT nwork](#)
work space size
- [REAL * work](#)
work space

9.21.1 Detailed Description

Data for ILU setup.

Definition at line 393 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.22 ILU_param Struct Reference

Parameters for ILU.

```
#include <fasp.h>
```

Data Fields

- [SHORT print_level](#)
print level
- [SHORT ILU_type](#)
ILU type for decomposition.
- [INT ILU_ifil](#)
level of fill-in for ILUk
- [REAL ILU_droptol](#)
drop tolerance for ILUt
- [REAL ILU_relax](#)
add the sum of dropped elements to diagonal element in proportion relax
- [REAL ILU_permtol](#)
*permuted if $\text{permtol} * |a(i,j)| > |a(i,i)|$*

9.22.1 Detailed Description

Parameters for ILU.

Definition at line 367 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.23 input_param Struct Reference

Input parameters.

```
#include <fasp.h>
```

Data Fields

9.23.1 Detailed Description

Input parameters.

Input parameters, reading from disk file

Definition at line 991 of file fasp.h.

9.23.2 Field Documentation

9.23.2.1 SHORT AMG_aggregation_type

aggregation type

Definition at line 1045 of file fasp.h.

9.23.2.2 INT AMG_aggressive_level

number of levels use aggressive coarsening

Definition at line 1050 of file fasp.h.

9.23.2.3 INT AMG_aggressive_path

number of paths used to determine strongly coupled C-set

Definition at line 1051 of file fasp.h.

9.23.2.4 SHORT AMG_amli_degree

degree of the polynomial used by AMLI cycle

Definition at line 1039 of file fasp.h.

9.23.2.5 INT AMG_coarse_dof

max number of coarsest level DOF

Definition at line 1033 of file fasp.h.

9.23.2.6 SHORT AMG_coarse_scaling

switch of scaling of the coarse grid correction

Definition at line 1038 of file fasp.h.

9.23.2.7 SHORT AMG_coarse_solver

coarse solver type

Definition at line 1037 of file fasp.h.

9.23.2.8 SHORT AMG_coarsening_type

coarsening type

Definition at line 1044 of file fasp.h.

9.23.2.9 SHORT AMG_cycle_type

type of cycle

Definition at line 1026 of file fasp.h.

9.23.2.10 SHORT AMG_ILU_levels

how many levels use ILU smoother

Definition at line 1036 of file fasp.h.

9.23.2.11 SHORT AMG_interpolation_type

interpolation type

Definition at line 1046 of file fasp.h.

9.23.2.12 SHORT AMG_levels

maximal number of levels

Definition at line 1025 of file fasp.h.

9.23.2.13 INT AMG_max_aggregation

max size of each aggregate

Definition at line 1057 of file fasp.h.

9.23.2.14 REAL AMG_max_row_sum

maximal row sum

Definition at line 1049 of file fasp.h.

9.23.2.15 INT AMG_maxit

number of iterations for AMG used as preconditioner

Definition at line 1035 of file fasp.h.

9.23.2.16 SHORT AMG_nl_amli_krylov_type

type of Krylov method used by nonlinear AMLI cycle

Definition at line 1040 of file fasp.h.

9.23.2.17 INT AMG_pair_number

number of pairs in matching algorithm

Definition at line 1052 of file fasp.h.

9.23.2.18 SHORT AMG_polynomial_degree

degree of the polynomial smoother

Definition at line 1030 of file fasp.h.

9.23.2.19 SHORT AMG_postsmooth_iter

number of postsmoothing

Definition at line 1032 of file fasp.h.

9.23.2.20 SHORT AMG_presmooth_iter

number of presmoothing

Definition at line 1031 of file fasp.h.

9.23.2.21 REAL AMG_quality_bound

threshold for pair wise aggregation

Definition at line 1053 of file fasp.h.

9.23.2.22 REAL AMG_relaxation

over-relaxation parameter for SOR

Definition at line 1029 of file fasp.h.

9.23.2.23 INT AMG_Schwarz_levels

number of levels use Schwarz smoother

Definition at line 1041 of file fasp.h.

9.23.2.24 SHORT AMG_smooth_filter

use filter for smoothing the tentative prolongation or not

Definition at line 1059 of file fasp.h.

9.23.2.25 SHORT AMG_smooth_order

order for smoothers

Definition at line 1028 of file fasp.h.

9.23.2.26 SHORT AMG_smoother

type of smoother

Definition at line 1027 of file fasp.h.

9.23.2.27 REAL AMG_strong_coupled

strong coupled threshold for aggregate

Definition at line 1056 of file fasp.h.

9.23.2.28 REAL AMG_strong_threshold

strong threshold for coarsening

Definition at line 1047 of file fasp.h.

9.23.2.29 REAL AMG_tentative_smooth

relaxation factor for smoothing the tentative prolongation

Definition at line 1058 of file fasp.h.

9.23.2.30 REAL AMG_tol

tolerance for AMG if used as preconditioner

Definition at line 1034 of file fasp.h.

9.23.2.31 REAL AMG_truncation_threshold

truncation factor for interpolation

Definition at line 1048 of file fasp.h.

9.23.2.32 SHORT AMG_type

Type of AMG

Definition at line 1024 of file fasp.h.

9.23.2.33 REAL ILU_droptol

drop tolerance

Definition at line 1013 of file fasp.h.

9.23.2.34 INT ILU_lfil

level of fill-in

Definition at line 1012 of file fasp.h.

9.23.2.35 REAL ILU_permtol

permutation tolerance

Definition at line 1015 of file fasp.h.

9.23.2.36 REAL ILU_relax

scaling factor: add the sum of dropped entries to diagonal

Definition at line 1014 of file fasp.h.

9.23.2.37 SHORT ILU_type

ILU type for decomposition

Definition at line 1011 of file fasp.h.

9.23.2.38 char inifile[256]

ini file name

Definition at line 998 of file fasp.h.

9.23.2.39 INT itsolver_maxit

maximal number of iterations for iterative solvers

Definition at line 1007 of file fasp.h.

9.23.2.40 REAL itsolver_tol

tolerance for iterative linear solver

Definition at line 1006 of file fasp.h.

9.23.2.41 SHORT output_type

type of output stream

Definition at line 995 of file fasp.h.

9.23.2.42 SHORT precondition_type

type of preconditioner for iterative solvers

Definition at line 1004 of file fasp.h.

9.23.2.43 SHORT print_level

print level

Definition at line 994 of file fasp.h.

9.23.2.44 INT problem_num

problem number to solve

Definition at line 1000 of file fasp.h.

9.23.2.45 INT restart

restart number used in GMRES

Definition at line 1008 of file fasp.h.

9.23.2.46 INT Schwarz_blksolver

type of Schwarz block solver

Definition at line 1021 of file fasp.h.

9.23.2.47 INT Schwarz_maxlvl

maximal levels

Definition at line 1019 of file fasp.h.

9.23.2.48 INT Schwarz_mmsize

maximal block size

Definition at line 1018 of file fasp.h.

9.23.2.49 INT Schwarz_type

type of Schwarz method

Definition at line 1020 of file fasp.h.

9.23.2.50 **SHORT** solver_type

type of iterative solvers

Definition at line 1003 of file fasp.h.

9.23.2.51 **SHORT** stop_type

type of stopping criteria for iterative solvers

Definition at line 1005 of file fasp.h.

9.23.2.52 **char** workdir[256]

working directory for data files

Definition at line 999 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.24 itsolver_param Struct Reference

Parameters passed to iterative solvers.

```
#include <fasp.h>
```

Data Fields

- [SHORT itsolver_type](#)
- [SHORT precondition_type](#)
- [SHORT stop_type](#)
- [INT maxit](#)
- [REAL tol](#)
- [INT restart](#)
- [SHORT print_level](#)

9.24.1 Detailed Description

Parameters passed to iterative solvers.

Definition at line 1067 of file fasp.h.

9.24.2 Field Documentation

9.24.2.1 **SHORT** itsolver_type

solver type: see message.h

Definition at line 1069 of file fasp.h.

9.24.2.2 INT maxit

max number of iterations

Definition at line 1072 of file fasp.h.

9.24.2.3 SHORT precond_type

preconditioner type: see message.h

Definition at line 1070 of file fasp.h.

9.24.2.4 SHORT print_level

print level: 0–10

Definition at line 1075 of file fasp.h.

9.24.2.5 INT restart

number of steps for restarting: for GMRES etc

Definition at line 1074 of file fasp.h.

9.24.2.6 SHORT stop_type

stopping criteria type

Definition at line 1071 of file fasp.h.

9.24.2.7 REAL tol

convergence tolerance

Definition at line 1073 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.25 ivector Struct Reference

Vector with n entries of INT type.

```
#include <fasp.h>
```

Data Fields

- [INT row](#)
number of rows
- [INT * val](#)
actual vector entries

9.25.1 Detailed Description

Vector with n entries of INT type.

Definition at line 349 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.26 Link Struct Reference

Struct for Links.

```
#include <fasp.h>
```

Data Fields

- [INT prev](#)
previous node in the linklist
- [INT next](#)
next node in the linklist

9.26.1 Detailed Description

Struct for Links.

Definition at line 1116 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.27 linked_list Struct Reference

A linked list node.

```
#include <fasp.h>
```

Data Fields

- [INT data](#)
data
- [INT head](#)
starting of the list
- [INT tail](#)
ending of the list
- struct [linked_list](#) * [next_node](#)
next node
- struct [linked_list](#) * [prev_node](#)
previous node

9.27.1 Detailed Description

A linked list node.

Note

This definition is adapted from hypre 2.0.

Definition at line 1133 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.28 mallinfo Struct Reference

Data Fields

- MALLINFO_FIELD_TYPE **arena**
- MALLINFO_FIELD_TYPE **ordblks**
- MALLINFO_FIELD_TYPE **smbblks**
- MALLINFO_FIELD_TYPE **hblks**
- MALLINFO_FIELD_TYPE **hblkhd**
- MALLINFO_FIELD_TYPE **usmbblks**
- MALLINFO_FIELD_TYPE **fsmbblks**
- MALLINFO_FIELD_TYPE **uordblks**
- MALLINFO_FIELD_TYPE **fordblks**
- MALLINFO_FIELD_TYPE **keepcost**

9.28.1 Detailed Description

Definition at line 69 of file dlmalloc.h.

The documentation for this struct was generated from the following files:

- dlmalloc.h
- malloc.c.h

9.29 malloc_chunk Struct Reference

Data Fields

- size_t **prev_foot**
- size_t **head**
- struct [malloc_chunk](#) * **fd**
- struct [malloc_chunk](#) * **bk**

9.29.1 Detailed Description

Definition at line 2177 of file malloc.c.h.

The documentation for this struct was generated from the following file:

- malloc.c.h

9.30 malloc_params Struct Reference

Data Fields

- volatile size_t **magic**
- size_t **page_size**
- size_t **granularity**
- size_t **mmap_threshold**
- size_t **trim_threshold**
- flag_t **default_mflags**

9.30.1 Detailed Description

Definition at line 1494 of file malloc.c.h.

The documentation for this struct was generated from the following file:

- malloc.c.h

9.31 malloc_segment Struct Reference

Data Fields

- char * **base**
- size_t **size**
- struct [malloc_segment](#) * **next**
- flag_t **sflags**

9.31.1 Detailed Description

Definition at line 2458 of file malloc.c.h.

The documentation for this struct was generated from the following file:

- malloc.c.h

9.32 malloc_state Struct Reference

Data Fields

- binmap_t **smallmap**

- `binmap_t` **treemap**
- `size_t` **dvsizes**
- `size_t` **topsize**
- `char *` **least_addr**
- `mchunkptr` **dv**

- `size_t` **max_footprint**
- `flag_t` **mflags**
- `msegment` **seg**
- `void *` **extp**
- `size_t` **exts**

9.32.1 Detailed Description

Definition at line 2565 of file `malloc.c.h`.

The documentation for this struct was generated from the following file:

- `malloc.c.h`

9.33 `malloc_tree_chunk` Struct Reference

Data Fields

- `size_t` **prev_foot**
- `size_t` **head**
- struct `malloc_tree_chunk` * **fd**
- struct `malloc_tree_chunk` * **bk**
- struct `malloc_tree_chunk` * **child** $[2]$
- struct `malloc_tree_chunk` * **parent**
- `bindex_t` **index**

9.33.1 Detailed Description

Definition at line 2382 of file `malloc.c.h`.

The documentation for this struct was generated from the following file:

- `malloc.c.h`

9.34 Mumps_data Struct Reference

Parameters for MUMPS interface.

```
#include <fasp.h>
```

Data Fields

- [INT job](#)
work for MUMPS

9.34.1 Detailed Description

Parameters for MUMPS interface.

Added on 10/10/2014

Definition at line 452 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.35 mxv_matfree Struct Reference

Matrix-vector multiplication, replace the actual matrix.

```
#include <fasp.h>
```

Data Fields

- void * [data](#)
data for MxV, can be a Matrix or something else
- void(* [fct](#))(void *, [REAL](#) *, [REAL](#) *)
action for MxV, void function pointer

9.35.1 Detailed Description

Matrix-vector multiplication, replace the actual matrix.

Definition at line 975 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.36 nedmallinfo Struct Reference

Data Fields

- size_t [arena](#)

- `size_t ordblks`
- `size_t smblks`
- `size_t hblks`
- `size_t hblkhd`
- `size_t usmblks`
- `size_t fsmblks`
- `size_t uordblks`
- `size_t fordblks`
- `size_t keepcost`

9.36.1 Detailed Description

Definition at line 168 of file `nedmalloc.h`.

The documentation for this struct was generated from the following file:

- `nedmalloc.h`

9.37 precondition Struct Reference

Preconditioner data and action.

```
#include <fasp.h>
```

Data Fields

- `void * data`
data for preconditioner, void pointer
- `void(* fct)(REAL *, REAL *, void *)`
action for preconditioner, void function pointer

9.37.1 Detailed Description

Preconditioner data and action.

Note

This is the preconditioner structure for preconditioned iterative methods.

Definition at line 961 of file `fasp.h`.

The documentation for this struct was generated from the following file:

- `fasp.h`

9.38 precondition_block_data Struct Reference

Data passed to the preconditioner for block preconditioning for `block_dCSRmat` format.

```
#include <fasp_block.h>
```

Data Fields

- [block_dCSRmat](#) * [Abcsr](#)
- [dCSRmat](#) * [A_diag](#)
- [dvector](#) [r](#)
- void ** [LU_diag](#)
- [AMG_data](#) ** [mgl](#)
- [AMG_param](#) * [amgparam](#)

9.38.1 Detailed Description

Data passed to the preconditioner for block preconditioning for [block_dCSRmat](#) format.

This is needed for the block preconditioner.

Definition at line 499 of file [fasp_block.h](#).

9.38.2 Field Documentation

9.38.2.1 [dCSRmat](#)* [A_diag](#)

data for each diagonal block

Definition at line 506 of file [fasp_block.h](#).

9.38.2.2 [block_dCSRmat](#)* [Abcsr](#)

problem data, the blocks

Definition at line 504 of file [fasp_block.h](#).

9.38.2.3 [AMG_param](#)* [amgparam](#)

parameters for AMG

Definition at line 518 of file [fasp_block.h](#).

9.38.2.4 void** [LU_diag](#)

LU decomposition for the diagonal blocks (for UMFpack)

Definition at line 514 of file [fasp_block.h](#).

9.38.2.5 [AMG_data](#)** [mgl](#)

AMG data for the diagonal blocks

Definition at line 517 of file [fasp_block.h](#).

9.38.2.6 `dvector r`

temp work space

Definition at line 508 of file `fasp_block.h`.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.39 `precond_block_reservoir_data` Struct Reference

Data passed to the preconditioner for reservoir simulation problems.

```
#include <fasp_block.h>
```

Data Fields

- [block_Reservoir](#) * [A](#)
problem data in [block_Reservoir](#) format
- [block_dCSRmat](#) * [Abcsr](#)
problem data in [block_dCSRmat](#) format
- [dCSRmat](#) * [Acsr](#)
problem data in CSR format
- [INT](#) [ILU_ifil](#)
level of fill-in for structured ILU(k)
- [dSTRmat](#) * [LU](#)
LU matrix for Reservoir-Reservoir block in STR format.
- [ILU_data](#) * [LUcsr](#)
LU matrix for Reservoir-Reservoir block in CSR format.
- [AMG_data](#) * [mgl_data](#)
AMG data for pressure-pressure block.
- [SHORT](#) [print_level](#)
print level in AMG preconditioner
- [INT](#) [maxit_AMG](#)
max number of iterations of AMG preconditioner
- [SHORT](#) [max_levels](#)
max number of AMG levels
- [REAL](#) [amg_tol](#)
tolerance for AMG preconditioner
- [SHORT](#) [cycle_type](#)
AMG cycle type.
- [SHORT](#) [smoother](#)
AMG smoother type.
- [SHORT](#) [presmooth_iter](#)
number of presmoothing
- [SHORT](#) [postsmooth_iter](#)
number of postsmoothing

- [SHORT coarsening_type](#)
coarsening type
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT coarse_scaling](#)
switch of scaling of coarse grid correction
- [INT maxit](#)
max number of iterations
- [INT restart](#)
number of iterations for restart
- [REAL tol](#)
tolerance for convergence
- [REAL * invS](#)
*inverse of the Schur complement $(-I - A_{wr} * A_{rr}^{-1} * A_{rw})^{-1}$, A_{rr} may be replaced by LU*
- [dvector * DPSinvDSS](#)
 *$Diag(PS) * inv(Diag(SS))$*
- [SHORT scaled](#)
- [ivector * perf_idx](#)
- [dSTRmat * RR](#)
- [dCSRmat * WW](#)
- [dCSRmat * PP](#)
- [dSTRmat * SS](#)
- [precond_diagstr * diag](#)
- [dvector * diaginv](#)
- [ivector * pivot](#)
- [dvector * diaginvS](#)
- [ivector * pivotS](#)
- [ivector * order](#)
- [dvector r](#)
- [REAL * w](#)

9.39.1 Detailed Description

Data passed to the preconditioner for reservoir simulation problems.

Note

This is only needed for the Black Oil model with wells

Definition at line 401 of file fasp_block.h.

9.39.2 Field Documentation

9.39.2.1 precondition_diagstr* diag

the diagonal inverse for diagonal scaling

Definition at line 481 of file fasp_block.h.

9.39.2.2 dvector* diaginV

the inverse of the diagonals for GS/block GS smoother (whole reservoir matrix)

Definition at line 482 of file fasp_block.h.

9.39.2.3 dvector* diaginVS

the inverse of the diagonals for GS/block GS smoother (saturation block)

Definition at line 484 of file fasp_block.h.

9.39.2.4 ivector* order

order for smoothing

Definition at line 486 of file fasp_block.h.

9.39.2.5 ivector* perf_idx

variable index for perf

Definition at line 474 of file fasp_block.h.

9.39.2.6 ivector* pivot

the pivot for the GS/block GS smoother (whole reservoir matrix)

Definition at line 483 of file fasp_block.h.

9.39.2.7 ivector* pivotS

the pivot for the GS/block GS smoother (saturation block)

Definition at line 485 of file fasp_block.h.

9.39.2.8 dCSRmat* PP

pressure block after diagonal scaling

Definition at line 478 of file fasp_block.h.

9.39.2.9 dvector r

temporary dvector used to store and restore the residual

Definition at line 489 of file fasp_block.h.

9.39.2.10 dSTRmat* RR

Diagonal scaled reservoir block

Definition at line 476 of file fasp_block.h.

9.39.2.11 SHORT scaled

whether the matrix is scaled

Definition at line 473 of file fasp_block.h.

9.39.2.12 dSTRmat* SS

saturation block after diagonal scaling

Definition at line 479 of file fasp_block.h.

9.39.2.13 REAL* w

temporary work space for other usage

Definition at line 490 of file fasp_block.h.

9.39.2.14 dCSRmat* WW

Argumented well block

Definition at line 477 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.40 precondition_data Struct Reference

Data passed to the preconditioners.

```
#include <fasp.h>
```

Data Fields

- [SHORT AMG_type](#)
type of AMG method
- [SHORT print_level](#)
print level in AMG preconditioner
- [INT maxit](#)
max number of iterations of AMG preconditioner
- [SHORT max_levels](#)
max number of AMG levels
- [REAL tol](#)
tolerance for AMG preconditioner
- [SHORT cycle_type](#)
AMG cycle type.
- [SHORT smoother](#)
AMG smoother type.

- [SHORT smooth_order](#)
AMG smoother ordering.
- [SHORT presmooth_iter](#)
number of presmoothing
- [SHORT postsmooth_iter](#)
number of postsmoothing
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT polynomial_degree](#)
degree of the polynomial smoother
- [SHORT coarsening_type](#)
switch of scaling of the coarse grid correction
- [SHORT coarse_solver](#)
coarse solver type for AMG
- [SHORT coarse_scaling](#)
switch of scaling of the coarse grid correction
- [SHORT amli_degree](#)
degree of the polynomial used by AMLI cycle
- [SHORT nl_amli_krylov_type](#)
type of Krylov method used by Nonlinear AMLI cycle
- [REAL tentative_smooth](#)
smooth factor for smoothing the tentative prolongation
- [REAL * amli_coef](#)
coefficients of the polynomial used by AMLI cycle
- [AMG_data * mgl_data](#)
AMG preconditioner data.
- [ILU_data * LU](#)
ILU preconditioner data (needed for CPR type preconditioner)
- [dCSRmat * A](#)
Matrix data.
- [dCSRmat * A_nk](#)
Matrix data for near kernel.
- [dCSRmat * P_nk](#)
Prolongation for near kernel.
- [dCSRmat * R_nk](#)
Restriction for near kernel.
- [dvector r](#)
temporary dvector used to store and restore the residual
- [REAL * w](#)
temporary work space for other usage

9.40.1 Detailed Description

Data passed to the preconditioners.

Definition at line 757 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.41 precondition_data_bsr Struct Reference

Data passed to the preconditioners.

```
#include <fasp_block.h>

Data Fields

- [SHORT AMG_type](#)
type of AMG method
- [SHORT print_level](#)
print level in AMG preconditioner
- [INT maxit](#)
max number of iterations of AMG preconditioner
- [INT max_levels](#)
max number of AMG levels
- [REAL tol](#)
tolerance for AMG preconditioner
- [SHORT cycle_type](#)
AMG cycle type.
- [SHORT smoother](#)
AMG smoother type.
- [SHORT smooth_order](#)
AMG smoother ordering.
- [SHORT presmooth_iter](#)
number of presmoothing
- [SHORT postsmooth_iter](#)
number of postsmoothing
- [SHORT coarsening_type](#)
coarsening type
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT coarse_solver](#)
coarse solver type for AMG
- [SHORT coarse_scaling](#)
switch of scaling of the coarse grid correction
- [SHORT amli_degree](#)
degree of the polynomial used by AMLI cycle
- [REAL * amli_coef](#)
coefficients of the polynomial used by AMLI cycle
- [REAL tentative_smooth](#)
smooth factor for smoothing the tentative prolongation
- [SHORT nl_amli_krylov_type](#)
type of krylov method used by Nonlinear AMLI cycle
- [AMG_data_bsr * mgl_data](#)
AMG preconditioner data.
- [AMG_data * pres_mgl_data](#)

- [AMG preconditioner data for pressure block.](#)
- [ILU_data * LU](#)
ILU preconditioner data (needed for CPR type preconditioner)
- [dBSRmat * A](#)
Matrix data.
- [dCSRmat * A_nk](#)
Matrix data for near kernal.
- [dCSRmat * P_nk](#)
Prolongation for near kernal.
- [dCSRmat * R_nk](#)
Resriction for near kernal.
- [dvector r](#)
temporary dvector used to store and restore the residual
- [REAL * w](#)
temporary work space for other usage

9.41.1 Detailed Description

Data passed to the preconditioners.

Note

This structure is needed for the AMG solver/preconditioner in BSR format

Definition at line 308 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.42 precondition_data_str Struct Reference

Data passed to the preconditioner for [dSTRmat](#) matrices.

```
#include <fasp.h>
```

Data Fields

- [SHORT AMG_type](#)
type of AMG method
- [SHORT print_level](#)
print level in AMG preconditioner
- [INT maxit](#)
max number of iterations of AMG preconditioner
- [SHORT max_levels](#)
max number of AMG levels
- [REAL tol](#)
tolerance for AMG preconditioner

- [SHORT cycle_type](#)
AMG cycle type.
- [SHORT smoother](#)
AMG smoother type.
- [SHORT presmooth_iter](#)
number of presmoothing
- [SHORT postsmooth_iter](#)
number of postsmoothing
- [SHORT coarsening_type](#)
coarsening type
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT coarse_scaling](#)
switch of scaling of the coarse grid correction
- [AMG_data](#) * [mgl_data](#)
AMG preconditioner data.
- [ILU_data](#) * [LU](#)
ILU preconditioner data (needed for CPR type preconditioner)
- [SHORT scaled](#)
whether the matrix are scaled or not
- [dCSRmat](#) * [A](#)
the original CSR matrix
- [dSTRmat](#) * [A_str](#)
store the whole reservoir block in STR format
- [dSTRmat](#) * [SS_str](#)
store Saturation block in STR format
- [dvector](#) * [diaginv](#)
the inverse of the diagonals for GS/block GS smoother (whole reservoir matrix)
- [ivector](#) * [pivot](#)
the pivot for the GS/block GS smoother (whole reservoir matrix)
- [dvector](#) * [diaginvS](#)
the inverse of the diagonals for GS/block GS smoother (saturation block)
- [ivector](#) * [pivotS](#)
the pivot for the GS/block GS smoother (saturation block)
- [ivector](#) * [order](#)
order for smoothing
- [ivector](#) * [neigh](#)
array to store neighbor information
- [dvector](#) [r](#)
temporary dvector used to store and restore the residual
- [REAL](#) * [w](#)
temporary work space for other usage

9.42.1 Detailed Description

Data passed to the preconditioner for [dSTRmat](#) matrices.

Definition at line 853 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.43 `precond_diagbsr` Struct Reference

Data passed to diagonal preconditioner for [dBSRmat](#) matrices.

```
#include <fasp_block.h>
```

Data Fields

- [INT nb](#)
dimension of each sub-block
- [dvector diag](#)
diagonal elements

9.43.1 Detailed Description

Data passed to diagonal preconditioner for [dBSRmat](#) matrices.

Note

This is needed for the diagonal preconditioner.

Definition at line 290 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.44 `precond_diagstr` Struct Reference

Data passed to diagonal preconditioner for [dSTRmat](#) matrices.

```
#include <fasp.h>
```

Data Fields

- [INT nc](#)
number of components
- [dvector diag](#)
diagonal elements

9.44.1 Detailed Description

Data passed to diagonal preconditioner for [dSTRmat](#) matrices.

Note

This is needed for the diagonal preconditioner.

Definition at line 945 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.45 precondition_FASP_blkoi_data Struct Reference

Data passed to the preconditioner for preconditioning reservoir simulation problems.

```
#include <fasp_block.h>
```

Data Fields

- [block_BSR](#) * A
Part 1: Basic data.
- [SHORT](#) scaled
Part 2: Data for CPR-like preconditioner for reservoir block.
- [dvector](#) * [diaginv_noscale](#)
- [dBSRmat](#) * RR
- [ivector](#) * neigh

- [dCSRmat](#) * PP
- [AMG_data](#) * [mgl_data](#)
- [SHORT](#) print_level
print level in AMG preconditioner
- [INT](#) maxit_AMG
max number of iterations of AMG preconditioner
- [SHORT](#) max_levels
max number of AMG levels
- [REAL](#) amg_tol
tolerance for AMG preconditioner
- [SHORT](#) cycle_type
AMG cycle type.
- [SHORT](#) smoother
AMG smoother type.
- [SHORT](#) smooth_order
AMG smoothing order.

- [SHORT presmooth_iter](#)
number of presmoothing
- [SHORT postsmooth_iter](#)
number of postsmoothing
- [SHORT coarsening_type](#)
coarsening type
- [INT coarse_dof](#)
coarset dof
- [SHORT coarse_solver](#)
coarse level solver type
- [REAL relaxation](#)
relaxation parameter for SOR smoother
- [SHORT coarse_scaling](#)
switch of scaling of coarse grid correction
- [SHORT amli_degree](#)
degree of the polynomial used by AMLI cycle
- [REAL * amli_coef](#)
coefficients of the polynomial used by AMLI cycle
- [REAL tentative_smooth](#)
relaxation parameter for smoothing the tentative prolongation
- [dvector * diaginv](#)
- [ivector * pivot](#)
- [ILU_data * LU](#)
data of ILU for reservoir block
- [ivector * perf_idx](#)
- [ivector * perf_neigh](#)
- [dCSRmat * WW](#)
- [void * Numeric](#)
data for direct solver for argumented well block
- [REAL * invS](#)
*inverse of the schur complement $(-I - Awr*Arr^{-1}*Arw)^{-1}$, Arr may be replaced by LU*
- [INT maxit](#)
- [INT restart](#)
- [REAL tol](#)
- [dvector r](#)
- [REAL * w](#)

9.45.1 Detailed Description

Data passed to the preconditioner for preconditioning reservoir simulation problems.

Note

This is only needed for the Black Oil model with wells

Definition at line 528 of file fasp_block.h.

9.45.2 Field Documentation

9.45.2.1 **block_BSR*** A

Part 1: Basic data.

whole jacobian system in block_BSRmat

Definition at line 533 of file fasp_block.h.

9.45.2.2 **dvector*** diaginv

inverse of the diagonal blocks of reservoir block

Definition at line 608 of file fasp_block.h.

9.45.2.3 **dvector*** diaginv_noscale

inverse of diagonal blocks for diagonal scaling

Definition at line 540 of file fasp_block.h.

9.45.2.4 **dvector*** diaginv_S

inverse of the diagonal blocks of saturation block

Definition at line 549 of file fasp_block.h.

9.45.2.5 **INT** maxit

max number of iterations

Definition at line 626 of file fasp_block.h.

9.45.2.6 **AMG_data*** mgl_data

AMG data for presure-presure block

Definition at line 554 of file fasp_block.h.

9.45.2.7 **ivector*** neigh

neighbor information of the reservoir block

Definition at line 544 of file fasp_block.h.

9.45.2.8 **ivector*** order

ordering of the reservoir block

Definition at line 545 of file fasp_block.h.

9.45.2.9 ivector* perf_idx

index of blocks which have perforation

Definition at line 615 of file fasp_block.h.

9.45.2.10 ivector* perf_neigh

index of blocks which are neighbors of perforations (include perforations)

Definition at line 616 of file fasp_block.h.

9.45.2.11 ivector* pivot

pivot for the GS smoothers for the reservoir matrix

Definition at line 609 of file fasp_block.h.

9.45.2.12 ivector* pivot_S

pivoting for the GS smoothers for saturation block

Definition at line 550 of file fasp_block.h.

9.45.2.13 dCSRmat* PP

pressure block

Definition at line 553 of file fasp_block.h.

9.45.2.14 dvector r

temporary dvector used to store and restore the residual

Definition at line 631 of file fasp_block.h.

9.45.2.15 INT restart

number of iterations for restart

Definition at line 627 of file fasp_block.h.

9.45.2.16 dBSRmat* RR

reservoir block

Definition at line 541 of file fasp_block.h.

9.45.2.17 SHORT scaled

Part 2: Data for CPR-like preconditioner for reservoir block.

scaled = 1 means the the following RR block is diagonal scaled

Definition at line 539 of file fasp_block.h.

9.45.2.18 dBSRmat* SS

saturation block

Definition at line 548 of file fasp_block.h.

9.45.2.19 REAL tol

tolerance

Definition at line 628 of file fasp_block.h.

9.45.2.20 REAL* w

temporary work space for other usage

Definition at line 632 of file fasp_block.h.

9.45.2.21 dCSRmat* WW

Argumented well block

Definition at line 617 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.46 precondition_sweeping_data Struct Reference

Data passed to the preconditioner for sweeping preconditioning.

```
#include <fasp_block.h>
```

Data Fields

- [INT NumLayers](#)
- [block_dCSRmat * A](#)
- [block_dCSRmat * Ai](#)
- [dCSRmat * local_A](#)
- [void ** local_LU](#)
- [ivector * local_index](#)
- [dvector r](#)
- [REAL * w](#)

9.46.1 Detailed Description

Data passed to the preconditioner for sweeping preconditioning.

Author

Xiaozhe Hu

Date

05/01/2014

Note

This is needed for the sweeping preconditioner.

Definition at line 645 of file fasp_block.h.

9.46.2 Field Documentation

9.46.2.1 **block_dCSRmat*** A

problem data, the sparse matrix

Definition at line 649 of file fasp_block.h.

9.46.2.2 **block_dCSRmat*** Ai

preconditioner data, the sparse matrix

Definition at line 650 of file fasp_block.h.

9.46.2.3 **dCSRmat*** local_A

local stiffness matrix for each layer

Definition at line 652 of file fasp_block.h.

9.46.2.4 **ivector*** local_index

local index for each layer

Definition at line 655 of file fasp_block.h.

9.46.2.5 **void**** local_LU

local LU decomposition (for UMFPack)

Definition at line 653 of file fasp_block.h.

9.46.2.6 INT NumLayers

number of layers

Definition at line 647 of file fasp_block.h.

9.46.2.7 dvector r

temporary dvector used to store and restore the residual

Definition at line 658 of file fasp_block.h.

9.46.2.8 REAL* w

temporary work space for other usage

Definition at line 659 of file fasp_block.h.

The documentation for this struct was generated from the following file:

- [fasp_block.h](#)

9.47 Schwarz_data Struct Reference

Data for Schwarz methods.

```
#include <fasp.h>
```

Data Fields

- [dCSRmat A](#)
pointer to the matrix
- [INT nblk](#)
number of blocks
- [INT * iblock](#)
row index of blocks
- [INT * jblock](#)
column index of blocks
- [REAL * rhsloc](#)
temp work space???
- [dvector rhsloc1](#)
local right hand side
- [dvector xloc1](#)
local solution
- [REAL * au](#)
LU decomposition: the U block.
- [REAL * al](#)
LU decomposition: the L block.
- [INT Schwarz_type](#)

- Schwarz method type.*
- [INT blk_solver](#)
 - Schwarz block solver.*
- [INT memt](#)
 - working space size*
- [INT * mask](#)
 - mask*
- [INT maxbs](#)
 - maximal block size*
- [INT * maxa](#)
 - maxa*
- [dCSRmat * blk_data](#)
 - matrix for each partition*
- [Mumps_data * mumps](#)
 - param for MUMPS*
- [Schwarz_param * swzparam](#)
 - param for Schwarz*

9.47.1 Detailed Description

Data for Schwarz methods.

This is needed for the Schwarz solver/preconditioner/smoothers.

Definition at line 470 of file fasp.h.

The documentation for this struct was generated from the following file:

- [fasp.h](#)

9.48 Schwarz_param Struct Reference

Parameters for Schwarz method.

```
#include <fasp.h>
```

Data Fields

- [SHORT print_level](#)
 - print leve*
- [SHORT Schwarz_type](#)
 - type for Schwarz method*
- [INT Schwarz_maxlvl](#)
 - maximal level for constructing the blocks*
- [INT Schwarz_mmsize](#)
 - maximal size of blocks*
- [INT Schwarz_blksolver](#)
 - type of Schwarz block solver*

9.48.1 Detailed Description

Parameters for Schwarz method.

Added on 05/14/2012

Definition at line 427 of file fasp.h.

- [fasp.h](#)

Chapter 10

File Documentation

10.1 amg.c File Reference

AMG method as an iterative solver (main file)

```
#include <time.h>
#include "fasp.h"
#include "fasp_funcs.h"
```

Functions

- void [fasp_solver_amg](#) (dCSRmat *A, dvector *b, dvector *x, AMG_param *param)
Solve $Ax = b$ by algebraic multigrid methods.

10.1.1 Detailed Description

AMG method as an iterative solver (main file)

10.1.2 Function Documentation

10.1.2.1 void [fasp_solver_amg](#) (dCSRmat * A, dvector * b, dvector * x, AMG_param * param)

Solve $Ax = b$ by algebraic multigrid methods.

Parameters

<i>A</i>	Pointer to dCSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>param</i>	Pointer to AMG_param : AMG parameters

Author

Chensong Zhang

Date

04/06/2010

Note

Definition at line 37 of file amg.c.

10.2 amg_setup_cr.c File Reference

Brannick-Falgout compatible relaxation based AMG: SETUP phase.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [SHORT fasp_amg_setup_cr](#) ([AMG_data](#) *mgl, [AMG_param](#) *param)
Set up phase of Brannick Falgout CR coarsening for classic AMG.

10.2.1 Detailed Description

Brannick-Falgout compatible relaxation based AMG: SETUP phase.

Note

Setup A, P, R and levels using the Compatible Relaxation coarsening for classic AMG interpolation Refer to J. Brannick and R. Falgout "Compatible relaxation and coarsening in AMG"

Warning

Not working. Yet need to be fixed. –Chensong

10.2.2 Function Documentation

10.2.2.1 **SHORT fasp_amg_setup_cr** ([AMG_data](#) * *mgl*, [AMG_param](#) * *param*)

Set up phase of Brannick Falgout CR coarsening for classic AMG.

Parameters

<i>mgl</i>	Pointer to AMG data: AMG_data
<i>param</i>	Pointer to AMG parameters: AMG_param

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Author

James Brannick

Date

04/21/2010

Modified by Chensong Zhang on 05/10/2013: adjust the structure.

10.6 amg_solve.c File Reference

Algebraic multigrid iterations: SOLVE phase.

```
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "itsolver_util.inl"
```

Functions

- [INT fasp_amg_solve](#) ([AMG_data](#) *mgl, [AMG_param](#) *param)
AMG – SOLVE phase.
- [INT fasp_amg_solve_aml](#) ([AMG_data](#) *mgl, [AMG_param](#) *param)
AML – SOLVE phase.
- [INT fasp_amg_solve_nl_aml](#) ([AMG_data](#) *mgl, [AMG_param](#) *param)
Nonlinear AML – SOLVE phase.
- [void fasp_fm](#) ([AMG_data](#) *mgl, [AMG_param](#) *param)
FM – SOLVE phase.

10.6.1 Detailed Description

Algebraic multigrid iterations: SOLVE phase.

Note

Solve $Ax=b$ using multigrid method. This is SOLVE phase only and is independent of SETUP method used! Should be called after multigrid hierarchy has been generated!

10.6.2 Function Documentation

10.6.2.1 INT fasp_amg_solve (AMG_data * *mgl*, AMG_param * *param*)

AMG – SOLVE phase.

Parameters

<i>mgl</i>	Pointer to AMG data: AMG_data
<i>param</i>	Pointer to AMG parameters: AMG_param

Returns

Iteration number if converges; ERROR otherwise.

Author

Xuehai Huang, Chensong Zhang

Date

04/02/2010

Modified by Chensong 04/21/2013: Fix an output typo

Definition at line 36 of file amg_solve.c.

10.6.2.2 `INT fasp_amg_solve_amli (AMG_data * mgl, AMG_param * param)`

AMLI – SOLVE phase.

Parameters

<i>mgl</i>	Pointer to AMG data: AMG_data
<i>param</i>	Pointer to AMG parameters: AMG_param

Returns

Iteration number if converges; ERROR otherwise.

Author

Xiaozhe Hu

Date

01/23/2011

Note

AMLI polynomial computed by the best approximation of $1/x$. Refer to Johannes K. Kraus, Panayot S. Vassilevski, Ludmil T. Zikatanov, "Polynomial of best uniform approximation to x^{-1} and smoothing in two-level methods", 2013.

Modified by Chensong 04/21/2013: Fix an output typo

Definition at line 125 of file amg_solve.c.

10.6.2.3 `INT fasp_amg_solve_nl_amli (AMG_data * mgl, AMG_param * param)`

Nonlinear AMLI – SOLVE phase.

Parameters

<i>mgl</i>	Pointer to AMG data: AMG_data
<i>param</i>	Pointer to AMG parameters: AMG_param

Returns

Iteration number if converges; ERROR otherwise.

10.7 amlirecur.c File Reference

Abstract AMLI multilevel iteration – recursive version.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "mg_util.inl"
```

Functions

- void `fasp_solver_amli` (`AMG_data *mgl`, `AMG_param *param`, `INT level`)
Solve $Ax=b$ with recursive AMLI-cycle.
- void `fasp_solver_nl_amli` (`AMG_data *mgl`, `AMG_param *param`, `INT level`, `INT num_levels`)
Solve $Ax=b$ with recursive nonlinear AMLI-cycle.
- void `fasp_solver_nl_amli_bsr` (`AMG_data_bsr *mgl`, `AMG_param *param`, `INT level`, `INT num_levels`)
Solve $Ax=b$ with recursive nonlinear AMLI-cycle.
- void `fasp_amg_amli_coef` (const `REAL lambda_max`, const `REAL lambda_min`, const `INT degree`, `REAL *coef`)
Compute the coefficients of the polynomial used by AMLI-cycle.

10.7.1 Detailed Description

Abstract AMLI multilevel iteration – recursive version.

Note

AMLI and non-linear AMLI cycles

10.7.2 Function Documentation

10.7.2.1 void `fasp_amg_amli_coef` (const `REAL lambda_max`, const `REAL lambda_min`, const `INT degree`, `REAL * coef`)

Compute the coefficients of the polynomial used by AMLI-cycle.

Parameters

<code>lambda_max</code>	Maximal lambda
<code>lambda_min</code>	Minimal lambda
<code>degree</code>	Degree of polynomial approximation
<code>coef</code>	Coefficient of AMLI (output)

Author

10.8 array.c File Reference

Simple array operations – init, set, copy, etc.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_array_null](#) ([REAL](#) *x)
Initialize an array.
- void [fasp_array_set](#) (const [INT](#) n, [REAL](#) *x, const [REAL](#) val)
Set initial value for an array to be x=val.
- void [fasp_iarray_set](#) (const [INT](#) n, [INT](#) *x, const [INT](#) val)
Set initial value for an array to be x=val.
- void [fasp_array_cp](#) (const [INT](#) n, [REAL](#) *x, [REAL](#) *y)
Copy an array to the other y=x.
- void [fasp_iarray_cp](#) (const [INT](#) n, [INT](#) *x, [INT](#) *y)
Copy an array to the other y=x.
- void [fasp_array_cp_nc3](#) ([REAL](#) *x, [REAL](#) *y)
Copy an array to the other y=x, the length is 3.
- void [fasp_array_cp_nc5](#) ([REAL](#) *x, [REAL](#) *y)
Copy an array to the other y=x, the length is 5.
- void [fasp_array_cp_nc7](#) ([REAL](#) *x, [REAL](#) *y)
Copy an array to the other y=x, the length is 7.

10.8.1 Detailed Description

Simple array operations – init, set, copy, etc.

10.8.2 Function Documentation

10.8.2.1 void fasp_array_cp (const INT *n*, REAL * *x*, REAL * *y*)

Copy an array to the other $y=x$.

Parameters

<i>n</i>	Number of variables
<i>x</i>	Pointer to the original vector
<i>y</i>	Pointer to the destination vector

Author

Chensong Zhang

Date

2010/04/03

Definition at line 165 of file array.c.

10.8.2.2 void fasp_array_cp_nc3 (REAL * *x*, REAL * *y*)

Copy an array to the other $y=x$, the length is 3.

Parameters

<i>x</i>	Pointer to the original vector
<i>y</i>	Pointer to the destination vector

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

Special unrolled routine designed for a specific application

Definition at line 205 of file array.c.

10.8.2.3 void fasp_array_cp_nc5 (REAL * *x*, REAL * *y*)

Copy an array to the other $y=x$, the length is 5.

Parameters

x	Pointer to the original vector
y	Pointer to the destination vector

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

Special unrolled routine designed for a specific application

Definition at line 226 of file array.c.

10.8.2.4 void fasp_array_cp_nc7 (REAL * x, REAL * y)

Copy an array to the other y=x, the length is 7.

Parameters

x	Pointer to the original vector
y	Pointer to the destination vector

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

Special unrolled routine designed for a specific application

Definition at line 249 of file array.c.

10.8.2.5 void fasp_array_null (REAL * x)

Initialize an array.

Parameters

x	Pointer to the vector
-----	-----------------------

Author

Chensong Zhang

Date

2010/04/03

Definition at line 29 of file array.c.

10.8.2.6 void fasp_array_set (const INT *n*, REAL * *x*, const REAL *val*)

Set initial value for an array to be $x=val$.

Parameters

<i>n</i>	Number of variables
<i>x</i>	Pointer to the vector
<i>val</i>	Initial value for the REAL array

Author

Chensong Zhang

Date

04/03/2010

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 48 of file array.c.

10.8.2.7 void fasp_iarray_cp (const INT *n*, INT * *x*, INT * *y*)

Copy an array to the other $y=x$.

Parameters

<i>n</i>	Number of variables
<i>x</i>	Pointer to the original vector
<i>y</i>	Pointer to the destination vector

Author

Chunsheng Feng, Xiaoqiang Yue

Date

05/23/2012

Definition at line 185 of file array.c.

10.8.2.8 void fasp_iarray_set (const INT *n*, INT * *x*, const INT *val*)

Set initial value for an array to be $x=val$.

Parameters

<i>n</i>	Number of variables
<i>x</i>	Pointer to the vector

<i>val</i>	Initial value for the REAL array
------------	----------------------------------

Author

Chensong Zhang

Date

04/03/2010

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/25/2012

10.9 blas_array.c File Reference

BLAS1 operations for arrays.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void `fasp_blas_array_ax` (const `INT` n, const `REAL` a, `REAL` *x)
 $x = a * x$
- void `fasp_blas_array_axpy` (const `INT` n, const `REAL` a, `REAL` *x, `REAL` *y)
 $y = a * x + y$
- void `fasp_blas_array_axpyz` (const `INT` n, const `REAL` a, `REAL` *x, `REAL` *y, `REAL` *z)
 $z = a * x + y$
- void `fasp_blas_array_axpby` (const `INT` n, const `REAL` a, `REAL` *x, const `REAL` b, `REAL` *y)
 $y = a * x + b * y$
- `REAL` `fasp_blas_array_dotprod` (const `INT` n, const `REAL` *x, const `REAL` *y)
Inner product of two arrays (x,y)
- `REAL` `fasp_blas_array_norm1` (const `INT` n, const `REAL` *x)
L1 norm of array x.
- `REAL` `fasp_blas_array_norm2` (const `INT` n, const `REAL` *x)
L2 norm of array x.
- `REAL` `fasp_blas_array_norminf` (const `INT` n, const `REAL` *x)
Linf norm of array x.

10.9.1 Detailed Description

BLAS1 operations for arrays.

10.9.2 Function Documentation

10.9.2.1 void fasp_blas_array_ax (const INT n , const REAL a , REAL * x)

$x = a * x$

Parameters

n	Number of variables
a	Factor a
x	Pointer to x

Author

Chensong Zhang

Date

07/01/209

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Note

x is reused to store the resulting array.

Definition at line 35 of file blas_array.c.

10.9.2.2 void fasp_blas_array_axpy (const INT n , const REAL a , REAL * x , const REAL b , REAL * y)

$y = a*x + b*y$

Parameters

n	Number of variables
a	Factor a
x	Pointer to x
b	Factor b
y	Pointer to y

Author

Chensong Zhang

Date

07/01/209

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Note

y is reused to store the resulting array.

Definition at line 218 of file blas_array.c.

10.9.2.3 void fasp_blas_array_axpy (const INT n , const REAL a , REAL * x , REAL * y)

$y = a*x + y$

Parameters

n	Number of variables
a	Factor a
x	Pointer to x
y	Pointer to y

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Note

y is reused to store the resulting array.

Definition at line 87 of file blas_array.c.

10.9.2.4 void fasp_blas_array_axpyz (const INT n , const REAL a , REAL * x , REAL * y , REAL * z)

 $z = a * x + y$

Parameters

n	Number of variables
a	Factor a
x	Pointer to x
y	Pointer to y
z	Pointer to z

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 167 of file blas_array.c.

10.9.2.5 REAL fasp_blas_array_dotprod (const INT n , const REAL * x , const REAL * y)

Inner product of two arrays (x,y)

Parameters

n	Number of variables
x	Pointer to x
y	Pointer to y

Returns

Inner product (x,y)

Author

Chensong Zhang

Date

07/01/209

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 267 of file blas_array.c.

10.9.2.6 REAL fasp_blas_array_norm1 (const INT n , const REAL * x)

L1 norm of array x.

Parameters

n	Number of variables
x	Pointer to x

Returns

L1 norm of x

Author

Chensong Zhang

Date

07/01/209

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 307 of file blas_array.c.

10.9.2.7 REAL fasp_blas_array_norm2 (const INT n , const REAL * x)

L2 norm of array x.

Parameters

n	Number of variables
x	Pointer to x

Returns

L2 norm of x

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 347 of file blas_array.c.

10.9.2.8 REAL fasp_blas_array_norminf (const INT n , const REAL * x)

Linf norm of array x .

Parameters

n	Number of variables
x	Pointer to x

Returns

L_inf norm of x

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Zheng Li on 06/28/2012

Definition at line 388 of file blas_array.c.

10.10 blas_bcsr.c File Reference

BLAS2 operations for [block_dCSRmat](#) matrices.

```
#include <time.h>
#include "fasp.h"
#include "fasp_block.h"
#include "fasp_functs.h"
```

Functions

- void `fasp_blas_bdcscr_aAxy` (const `REAL` `alpha`, `block_dCSRmat` *`A`, `REAL` *`x`, `REAL` *`y`)
*Matrix-vector multiplication $y = \alpha A * x + y$.*

10.11.2.6 void fasp_blas_dbsr_m xv ([dBSRmat](#) * *A*, REAL * *x*, REAL * *y*)

Compute $y := A*x$.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>x</i>	Pointer to the array x
<i>y</i>	Pointer to the array y

Author

Zhiyang Zhou

Date

10/25/2010

Note

Works for general nb (Xiaozhe)

10.11.2.7 void fasp_blas_dbsr_mvx_agg (dBSRmat * *A*, REAL * *x*, REAL * *y*)

Compute $y := A*x$, where each small block matrices of *A* is an identity matrix.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>x</i>	Pointer to the array <i>x</i>
<i>y</i>	Pointer to the array <i>y</i>

10.11.2.8 void fasp_blas_dbsr_rap (dBSRmat * *R*, dBSRmat * *A*, dBSRmat * *P*, dBSRmat * *B*)

dBSRmat sparse matrix multiplication $B=R*A*P$

Parameters

<i>R</i>	Pointer to the dBSRmat matrix
<i>A</i>	Pointer to the dBSRmat matrix
<i>P</i>	Pointer to the dBSRmat matrix
<i>B</i>	Pointer to dBSRmat matrix equal to $R*A*P$ (output)

*Triple sparse matrix multiplication $B = R * A * P$ (nonzero entries of R and P are ones)*
- `void fasp_blas_dcsr_ptap` (`dCSRmat *Pt`, `dCSRmat *A`, `dCSRmat *P`, `dCSRmat *Ac`)
*Triple sparse matrix multiplication $B = P' * A * P$.*
- `void fasp_blas_dcsr_rap4` (`dCSRmat *R`, `dCSRmat *A`, `dCSRmat *P`, `dCSRmat *B`, `INT *icor_ysk`)
*Triple sparse matrix multiplication $B = R * A * P$.*
- `void fasp_blas_dcsr_bandwidth` (`dCSRmat *A`, `INT *bndwith`)
Get bandwidth of matrix.

10.12.1 Detailed Description

BLAS2 operations for `dCSRmat` matrices.

Note

Sparse functions usually contain three runs. The three runs are all the same but they serve different purposes.

Example: If you do $c=a+b$:

- first do a dry run to find the number of non-zeroes in the result and form ic ;
- allocate space (memory) for jc and form this one;
- if you only care about a "boolean" result of the addition, you stop here;
- you call another routine, which uses ic and jc to perform the addition.

10.12.2 Function Documentation

10.12.2.1 void fasp_blas_dcsr_aAxy (const REAL *alpha*, dCSRmat * *A*, REAL * *x*, REAL * *y*)

Matrix-vector multiplication $y = \alpha A x + y$.

Parameters

<i>alpha</i>	REAL factor alpha
<i>A</i>	Pointer to dCSRmat matrix A
<i>x</i>	Pointer to array x
<i>y</i>	Pointer to array y

Author

Chensong Zhang

Date

07/01/2009

10.12.2.3 void fasp_blas_dcsr_add (dCSRmat * *A*, const REAL *alpha*, dCSRmat * *B*, const REAL *beta*, dCSRmat * *C*)

compute $C = \alpha * A + \beta * B$ in CSR format**Parameters**

<i>A</i>	Pointer to dCSRmat matrix
<i>alpha</i>	REAL factor alpha
<i>B</i>	Pointer to dCSRmat matrix
<i>beta</i>	REAL factor beta
<i>C</i>	Pointer to dCSRmat matrix

Returns

FASP_SUCCESS if succeed, ERROR if not

Definition at line 225 of file blas_csr.c.

10.12.2.8 void fasp_blas_dcsr_mxv_agg (dCSRmat * A, REAL * x, REAL * y)

Matrix-vector multiplication $y = A*x$, where the entries of A are all ones.

Parameters

A	Pointer to dCSRmat matrix A
x	Pointer to array x
y	Pointer to array y

Author

Xiaozhe Hu

Date

02/22/2011

Modified by Chunsheng Feng, Zheng Li on 08/29/2012

Definition at line 423 of file blas_csr.c.

10.12.2.9 void fasp_blas_dcsr_ptap (dCSRmat * Pt, dCSRmat * A, dCSRmat * P, dCSRmat * Ac)

Triple sparse matrix multiplication $B=P'*A*P$.

Parameters

Pt	Pointer to the restriction matrix
A	Pointer to the fine coefficient matrix
P	Pointer to the prolongation matrix
Ac	Pointer to the coarse coefficient matrix (output)

Author

Ludmil Zikatanov, Chensong Zhang

Date

05/10/2010

Modified by Chunsheng Feng, Zheng Li on 10/19/2012

Note

Driver to compute triple matrix product $P'*A*P$ using Itz CSR format. In ltx format: ia[0]=1, ja[0] and a[0] are used as usual. When called from Fortran, ia[0], ja[0] and a[0] will be just ia(1),ja(1),a(1). For the indices, ia_ltz[k] = ia_usual[k]+1, ja_ltz[k] = ja_usual[k]+1, a_ltz[k] = a_usual[k].

Definition at line 1596 of file blas_csr.c.

10.12.2.10 `void fasp_blas_dcsr_rap (dCSRmat * R, dCSRmat * A, dCSRmat * P, dCSRmat * RAP)`

Triple sparse matrix multiplication $B=R*A*P$.

Parameters

<i>R</i>	Pointer to the dCSRmat matrix R
<i>A</i>	Pointer to the dCSRmat matrix A
<i>P</i>	Pointer to the dCSRmat matrix P
<i>RAP</i>	Pointer to dCSRmat matrix equal to $R*A*P$

 - Compute $y := \alpha * A * x + \beta * y$.
- void `fasp_blas_smat_ymAx_ns2` (`REAL` *A, `REAL` *x, `REAL` *y)
 - Compute $y_s := y_s - Ass * x_s$, where 'A' is a 2*2 dense matrix, Ass is its saturaton part 1*1.
- void `fasp_blas_smat_ymAx_ns3` (`REAL` *A, `REAL` *x, `REAL` *y)
 - Compute $y_s := y_s - Ass * x_s$, where 'A' is a 3*3 dense matrix, Ass is its saturaton part 2*2.
- void `fasp_blas_smat_ymAx_ns5` (`REAL` *A, `REAL` *x, `REAL` *y)
 - Compute $y_s := y_s - Ass * x_s$, where 'A' is a 5*5 dense matrix, Ass is its saturaton part 4*4.
- void `fasp_blas_smat_ymAx_ns7` (`REAL` *A, `REAL` *x, `REAL` *y)
 - Compute $y_s := y_s - Ass * x_s$, where 'A' is a 7*7 dense matrix, Ass is its saturaton part 6*6.
- void `fasp_blas_smat_ymAx_ns` (`REAL` *A, `REAL` *x, `REAL` *y, const `INT` n)
 - Compute $y_s := y_s - Ass * x_s$, where 'A' is a n*n dense matrix, Ass is its saturaton part (n-1)*(n-1).

10.14.1 Detailed Description

BLAS2 operations for *small* dense matrices.

Warning

The routines are designed for full matrices only!

10.14.2 Function Documentation

10.14.2.1 `void fasp_blas_array_axpy_nc2 (const REAL a, REAL * x, REAL * y)`

$y = a*x + y$, the length of x and y is 2

Parameters

a	REAL factor a
x	Pointer to the original array
y	Pointer to the destination array

Author

Xiaozhe Hu

Date

18/11/2011

Definition at line 685 of file blas_smat.c.

10.14.2.2 `void fasp_blas_array_axpy_nc3 (const REAL a, REAL * x, REAL * y)`

$y = a*x + y$, the length of x and y is 3

Parameters

a	REAL factor a
x	Pointer to the original array
y	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Definition at line 708 of file blas_smat.c.

10.14.2.3 `void fasp_blas_array_axpy_nc5 (const REAL a, REAL * x, REAL * y)`

$y = a*x + y$, the length of x and y is 5

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to the original array
<i>y</i>	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Definition at line 737 of file blas_smat.c.

10.14.2.4 void fasp_blas_array_axpy_nc7 (const REAL *a*, REAL * *x*, REAL * *y*)

$y = a * x + y$, the length of *x* and *y* is 7

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to the original array
<i>y</i>	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Definition at line 784 of file blas_smat.c.

10.14.2.5 void fasp_blas_array_axpyz_nc2 (const REAL *a*, REAL * *x*, REAL * *y*, REAL * *z*)

$z = a * x + y$

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to the original array 1
<i>y</i>	Pointer to the original array 2
<i>z</i>	Pointer to the destination array

Author

Xiaozhe Hu

Date

18/11/2011

Note

z is the third array and the length of x, y and z is 2

Definition at line 500 of file blas_smat.c.

10.14.2.6 void fasp_blas_array_axpyz_nc3 (const REAL a, REAL * x, REAL * y, REAL * z)

$z = a * x + y$

Parameters

a	REAL factor a
x	Pointer to the original array 1
y	Pointer to the original array 2
z	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

z is the third array and the length of x, y and z is 3

Definition at line 527 of file blas_smat.c.

10.14.2.7 void fasp_blas_array_axpyz_nc5 (const REAL a, REAL * x, REAL * y, REAL * z)

$z = a * x + y$

Parameters

a	REAL factor a
x	Pointer to the original array 1
y	Pointer to the original array 2
z	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

z is the third array and the length of x, y and z is 5

Definition at line 560 of file blas_smat.c.

10.14.2.8 void fasp_blas_array_axpyz_nc7 (const REAL a, REAL * x, REAL * y, REAL * z)

$z = a * x + y$

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to the original array 1
<i>y</i>	Pointer to the original array 2
<i>z</i>	Pointer to the destination array

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Note

z is the third array and the length of *x*, *y* and *z* is 7

Definition at line 611 of file blas_smat.c.

10.14.2.9 void fasp_blas_smat_aAxpby (const REAL *alpha*, REAL * *A*, REAL * *x*, const REAL *beta*, REAL * *y*, const INT *n*)

Compute $y := \alpha * A * x + \beta * y$.

Parameters

<i>alpha</i>	REAL factor alpha
<i>A</i>	Pointer to the REAL array which stands for a $n \times n$ full matrix
<i>x</i>	Pointer to the REAL array with length <i>n</i>
<i>beta</i>	REAL factor beta
<i>y</i>	Pointer to the REAL array with length <i>n</i>
<i>n</i>	Length of array <i>x</i> and <i>y</i>

Author

Zhiyang Zhou

Definition at line 1308 of file blas_smat.c.

10.14.2.10 void fasp_blas_smat_add (REAL * *a*, REAL * *b*, const INT *n*, const REAL *alpha*, const REAL *beta*, REAL * *c*)

Compute $c = \alpha * a + \beta * b$.

Parameters

<i>a</i>	Pointer to the REAL array which stands a n*n matrix
<i>b</i>	Pointer to the REAL array which stands a n*n matrix
<i>n</i>	Dimension of the matrix
<i>alpha</i>	Scalar
<i>beta</i>	Scalar
<i>c</i>	Pointer to the REAL array which stands a n*n matrix

Author

Xiaozhe Hu

Date

05/26/2014

Definition at line 54 of file blas_smat.c.

10.14.2.11 void fasp_blas_smat_axm (REAL * *a*, const INT *n*, const REAL *alpha*)

Compute $\alpha * a$, store in *a*.

Parameters

<i>a</i>	Pointer to the REAL array which stands a n*n matrix
<i>n</i>	Dimension of the matrix
<i>alpha</i>	Scalar

Author

Xiaozhe Hu

Date

05/26/2014

Definition at line 26 of file blas_smat.c.

10.14.2.12 void fasp_blas_smat_mul (REAL * *a*, REAL * *b*, REAL * *c*, const INT *n*)

Compute the matrix product of two small full matrices *a* and *b*, stored in *c*.

Parameters

<i>a</i>	Pointer to the REAL array which stands a n*n matrix
<i>b</i>	Pointer to the REAL array which stands a n*n matrix
<i>c</i>	Pointer to the REAL array which stands a n*n matrix
<i>n</i>	Dimension of the matrix

Definition at line 1207 of file blas_smat.c.

10.14.2.23 void fasp_blas_smat_ymAx_nc2 (REAL * *A*, REAL * *x*, REAL * *y*)

Compute $y := y - Ax$, where '*A*' is a $n \times n$ dense matrix.

Parameters

<i>A</i>	Pointer to the 2*2 dense matrix
<i>x</i>	Pointer to the REAL array with length 3
<i>y</i>	Pointer to the REAL array with length 3

Author

Xiaozhe Hu

Date

18/11/2011

Note

Works for 2-component

Definition at line 1077 of file blas_smat.c.

10.14.2.24 void fasp_blas_smat_yMAx_nc3 (REAL * A, REAL * x, REAL * y)

Compute $y := y - Ax$, where 'A' is a $n \times n$ dense matrix.

Parameters

A	Pointer to the 3*3 dense matrix
x	Pointer to the REAL array with length 3
y	Pointer to the REAL array with length 3

Author

Xiaozhe Hu, Zhiyang Zhou

Date

01/06/2011

Note

Works for 3-component

Definition at line 1105 of file blas_smat.c.

10.14.2.25 void fasp_blas_smat_yMAx_nc5 (REAL * A, REAL * x, REAL * y)

Compute $y := y - Ax$, where 'A' is a $n \times n$ dense matrix.

Parameters

A	Pointer to the 5*5 dense matrix
x	Pointer to the REAL array with length 5
y	Pointer to the REAL array with length 5

Author

Xiaozhe Hu, Zhiyang Zhou

Date

01/06/2011

Note

Works for 5-component

Definition at line 1135 of file blas_smat.c.

10.14.2.26 void fasp_blas_smat_yMAx_nc7 (REAL * A, REAL * x, REAL * y)

Compute $y := y - Ax$, where 'A' is a 7×7 dense matrix.

Parameters

A	Pointer to the 7*7 dense matrix
x	Pointer to the REAL array with length 7
y	Pointer to the REAL array with length 7

Author

Xiaozhe Hu, Zhiyang Zhou

Date

01/06/2011

Note

Works for 7-component

Definition at line 1169 of file blas_smat.c.

10.14.2.27 void fasp_blas_smat_yMAx_ns (REAL * A , REAL * x , REAL * y , const INT n)

Compute $y_s := y_s - A s s * x_s$, where ' A ' is a $n*n$ dense matrix, $A s s$ is its saturaton part $(n-1)*(n-1)$.

Parameters

A	Pointer to the $n*n$ dense matrix
x	Pointer to the REAL array with length $n-1$
y	Pointer to the REAL array with length $n-1$
n	the dimension of the dense matrix

Author

Xiaozhe Hu

Date

2010/10/25

Note

Only for block smoother for saturation block without explicitly use saturation block!!

Definition at line 1482 of file blas_smat.c.

10.14.2.28 void fasp_blas_smat_yMAx_ns2 (REAL * A , REAL * x , REAL * y)

Compute $y_s := y_s - A s s * x_s$, where ' A ' is a $2*2$ dense matrix, $A s s$ is its saturaton part $1*1$.

Parameters

A	Pointer to the 2*2 dense matrix
x	Pointer to the REAL array with length 1
y	Pointer to the REAL array with length 1

Author

Xiaozhe Hu

Date

2011/11/18

Note

Works for 2-component (Xiaozhe) Only for block smoother for saturation block without explicitly use saturation block!!

Definition at line 1358 of file blas_smat.c.

10.14.2.29 void fasp_blas_smat_ymAx_ns3 (REAL * A, REAL * x, REAL * y)

Compute $y_s := y_s - Ass * x_s$, where 'A' is a 3*3 dense matrix, Ass is its saturaton part 2*2.

Parameters

A	Pointer to the 3*3 dense matrix
x	Pointer to the REAL array with length 2
y	Pointer to the REAL array with length 2

Author

Xiaozhe Hu

Date

2010/10/25

10.15 blas_str.c File Reference

BLAS2 operations for [dSTRmat](#) matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_blas_dstr_aAxy](#) (const [REAL](#) alpha, [dSTRmat](#) *A, [REAL](#) *x, [REAL](#) *y)
*Matrix-vector multiplication $y = \alpha * A * x + y$.*
- void [fasp_blas_dstr_mxv](#) ([dSTRmat](#) *A, [REAL](#) *x, [REAL](#) *y)
*Matrix-vector multiplication $y = A * x$.*
- [INT](#) [fasp_dstr_diagscale](#) ([dSTRmat](#) *A, [dSTRmat](#) *B)
 $B = D^{\{-1\}} A$.

10.15.1 Detailed Description

BLAS2 operations for [dSTRmat](#) matrices.

10.15.2 Function Documentation

10.15.2.1 void fasp_blas_dstr_aApy (const REAL *alpha*, dSTRmat * *A*, REAL * *x*, REAL * *y*)

Matrix-vector multiplication $y = \text{alpha} * A * x + y$.

Parameters

<i>alpha</i>	REAL factor alpha
<i>A</i>	Pointer to dSTRmat matrix
<i>x</i>	Pointer to REAL array
<i>y</i>	Pointer to REAL array

Author

Zhiyang Zhou, Xiaozhe Hu, Shiquan Zhang

Date

2010/10/15

Definition at line 47 of file blas_str.c.

10.15.2.2 void fasp_blas_dstr_mxv (dSTRmat * *A*, REAL * *x*, REAL * *y*)

Matrix-vector multiplication $y = A * x$.

Parameters

<i>A</i>	Pointer to dSTRmat matrix
<i>x</i>	Pointer to REAL array
<i>y</i>	Pointer to REAL array

Author

Chensong Zhang

Date

04/27/2013

Definition at line 117 of file blas_str.c.

10.15.2.3 INT fasp_dstr_diagscale (dSTRmat * *A*, dSTRmat * *B*)

$B = D^{-1}A$.

Parameters

<i>A</i>	Pointer to a 'dSTRmat' type matrix A
<i>B</i>	Pointer to a 'dSTRmat' type matrix B

Author

Shiquan Zhang

Date

2010/10/15

Modified by Chunsheng Feng, Zheng Li

10.16 blas_vec.c File Reference

BLAS1 operations for vectors.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_blas_dvec_axpy](#) (const [REAL](#) a, [dvector](#) *x, [dvector](#) *y)
 $y = a*x + y$
- void [fasp_blas_dvec_axpyz](#) (const [REAL](#) a, [dvector](#) *x, [dvector](#) *y, [dvector](#) *z)
 $z = a*x + y$, *z is a third vector (z is cleared)*
- [REAL fasp_blas_dvec_dotprod](#) ([dvector](#) *x, [dvector](#) *y)
Inner product of two vectors (x,y)
- [REAL fasp_blas_dvec_relerr](#) ([dvector](#) *x, [dvector](#) *y)
Relative error of two dvector x and y.
- [REAL fasp_blas_dvec_norm1](#) ([dvector](#) *x)
L1 norm of dvector x.
- [REAL fasp_blas_dvec_norm2](#) ([dvector](#) *x)
L2 norm of dvector x.
- [REAL fasp_blas_dvec_norminf](#) ([dvector](#) *x)
Linf norm of dvector x.

10.16.1 Detailed Description

BLAS1 operations for vectors.

10.16.2 Function Documentation

10.16.2.1 void fasp_blas_dvec_axpy (const REAL a, dvector * x, dvector * y)

$y = a * x + y$

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to dvector x
<i>y</i>	Pointer to dvector y

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 33 of file blas_vec.c.

10.16.2.2 void fasp_blas_dvec_axpyz (const REAL a, dvector * x, dvector * y, dvector * z)

$z = a * x + y$, z is a third vector (z is cleared)

Parameters

<i>a</i>	REAL factor a
<i>x</i>	Pointer to dvector x
<i>y</i>	Pointer to dvector y
<i>z</i>	Pointer to dvector z

Author

Chensong Zhang

Definition at line 85 of file blas_vec.c.

10.16.2.3 REAL fasp_blas_dvec_dotprod (dvector * x, dvector * y)

Inner product of two vectors (x,y)

Parameters

x	Pointer to dvector x
y	Pointer to dvector y

Returns

Inner product

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue

Date

05/23/2012

Definition at line 121 of file blas_vec.c.

10.16.2.4 REAL fasp_blas_dvec_norm1 (dvector * x)

L1 norm of dvector x.

Parameters

x	Pointer to dvector x
-----	----------------------

Returns

L1 norm of x

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue

Date

05/23/2012

Definition at line 222 of file blas_vec.c.

10.16.2.5 REAL fasp_blas_dvec_norm2 (dvector * x)

L2 norm of dvector x.

Parameters

x	Pointer to dvector x
-----	------------------------

Returns

L2 norm of x

Author

Chensong Zhang

Date

07/01/2009

Modified by Chunsheng Feng, Xiaoqiang Yue

Date

05/23/2012

Definition at line 265 of file blas_vec.c.

10.16.2.6 REAL fasp_blas_dvec_norminf (dvector * x)

Linf norm of dvector x .

Parameters

x	Pointer to dvector x
-----	------------------------

Returns

L_{∞} norm of x

Author

Chensong Zhang

Date

07/01/2009

Definition at line 305 of file blas_vec.c.

10.16.2.7 REAL fasp_blas_dvec_relerr (dvector * x , dvector * y)

Relative error of two dvector x and y .

Parameters

x	Pointer to dvector x
y	Pointer to dvector y

Returns

relative error $||x-y||/||x||$

Author

Chensong Zhang

Date

07/01/209

Modified by Chunsheng Feng, Xiaoqiang Yue

Date

10.17 checkmat.c File Reference

Check matrix properties.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [INT fasp_check_diagpos](#) (dCSRmat *A)
Check positivity of diagonal entries of a CSR sparse matrix.
- [SHORT fasp_check_diagzero](#) (dCSRmat *A)
Check whether a CSR sparse matrix has diagonal entries that are very close to zero.
- [INT fasp_check_diagdom](#) (dCSRmat *A)
Check whether a matrix is diagonal dominant.
- [INT fasp_check_symm](#) (dCSRmat *A)
Check symmetry of a sparse matrix of CSR format.
- [SHORT fasp_check_dCSRmat](#) (dCSRmat *A)
Check whether an [dCSRmat](#) matrix is valid or not.
- [SHORT fasp_check_iCSRmat](#) (iCSRmat *A)
Check whether an [iCSRmat](#) matrix is valid or not.

10.17.1 Detailed Description

Check matrix properties.

10.17.2 Function Documentation

10.17.2.1 **SHORT** fasp_check_dCSRmat (dCSRmat * A)

Check whether an [dCSRmat](#) matrix is valid or not.

Parameters

A	Pointer to the matrix in dCSRmat format
----------	---

10.17.2.2 **INT** fasp_check_diagdom (dCSRmat * A)

Check whether a matrix is diagonal dominant.

INT fasp_check_diagdom ([dCSRmat](#) *A)

Parameters

A	Pointer to the dCSRmat matrix
----------	---

Returns

Number of the rows which are diagonal dominant

Note

The routine checks whether the sparse matrix is diagonal dominant on every row. It will print out the percentage of the rows which are diagonal dominant and which are not; the routine will return the number of the rows which are diagonal dominant.

Definition at line 108 of file checkmat.c.

10.17.2.3 INT fasp_check_diagpos (dCSRmat * A)

Check positivity of diagonal entries of a CSR sparse matrix.

Parameters

A	Pointer to dCSRmat matrix
-----	---

Returns

Number of negative diagonal entries

Author

Shuo Zhang

Date

03/29/2009

Definition at line 27 of file checkmat.c.

10.17.2.4 SHORT fasp_check_diagzero (dCSRmat * A)

Check whether a CSR sparse matrix has diagonal entries that are very close to zero.

Parameters

A	pointer to the dCSRmat matrix
-----	---

Returns

FASP_SUCCESS if no diagonal entry is close to zero, else ERROR

Author

Shuo Zhang

Date

03/29/2009

Definition at line 64 of file checkmat.c.

10.17.2.5 SHORT fasp_check_iCSRmat (iCSRmat * A)

Check whether an [iCSRmat](#) matrix is valid or not.

Parameters

A	Pointer to the matrix in iCSRmat format
-----	---

Author

Shuo Zhang

Date

03/29/2009

Definition at line 309 of file checkmat.c.

10.17.2.6 INT fasp_check_symm (dCSRmat * A)

Check symmetry of a sparse matrix of CSR format.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
----------	---

Returns

1 and 2 if the structure of the matrix is not symmetric; 0 if the structure of the matrix is symmetric,

Note

Print the maximal relative difference between matrix and its transpose.

10.18 coarsening_cr.c File Reference

Coarsening with Brannick-Falgout strategy.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [INT fasp_amg_coarsening_cr](#) (const [INT](#) *i_0*, const [INT](#) *i_n*, [dCSRmat](#) **A*, [ivector](#) **vertices*, [AMG_param](#) **param*)
CR coarsening.

10.18.1 Detailed Description

Coarsening with Brannick-Falgout strategy.

10.18.2 Function Documentation

10.18.2.1 [INT fasp_amg_coarsening_cr](#) (const [INT](#) *i_0*, const [INT](#) *i_n*, [dCSRmat](#) * *A*, [ivector](#) * *vertices*, [AMG_param](#) * *param*)

CR coarsening.

Parameters

<i>i_0</i>	Starting index
<i>i_n</i>	Ending index
<i>A</i>	Pointer to dCSRmat : the coefficient matrix (index starts from 0)
<i>vertices</i>	Pointer to CF, 0: fpt (current level) or 1: cpt
<i>param</i>	Pointer to AMG_param : AMG parameters

Returns

Number of coarse level points

```

Functions

- [SHORT fasp_amg_coarsening_rs](#) ([dCSRmat](#) *A, [ivector](#) *vertices, [dCSRmat](#) *P, [iCSRmat](#) *S, [AMG_param](#) *param)

Standard and aggressive coarsening schemes.

10.19.1 Detailed Description

Coarsening with a modified Ruge-Stuben strategy.

Note

Ref Multigrid by U. Trottenberg, C. W. Oosterlee and A. Schuller Appendix P475 A.7 (by A. Brandt, P. Oswald and K. Stuben) Academic Press Inc., San Diego, CA, 2001.

ATTENTION: Do NOT use auto-indentation in this file!!!

10.19.2 Function Documentation

10.19.2.1 **SHORT** fasp_amg_coarsening_rs (dCSRmat * *A*, ivector * *vertices*, dCSRmat * *P*, iCSRmat * *S*, AMG_param * *param*)

Standard and aggressive coarsening schemes.

Parameters

<i>A</i>	Pointer to dCSRmat : Coefficient matrix (index starts from 0)
<i>vertices</i>	Indicator vector for the C/F splitting of the variables
<i>P</i>	Interpolation matrix (nonzero pattern only)
<i>S</i>	Strong connection matrix
<i>param</i>	Pointer to AMG_param : AMG parameters

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

10.20 convert.c File Reference

Some utilities for format conversion.

```
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- unsigned long [fasp_aux_change_endian4](#) (unsigned long x)
Swap order for different endian systems.
- double [fasp_aux_change_endian8](#) (double x)
Swap order for different endian systems.
- double [fasp_aux_bbyteToldouble](#) (unsigned char bytes[])
Swap order of double-precision float for different endian systems.
- [INT endian_convert_int](#) (const [INT](#) inum, const [INT](#) ilength, const [INT](#) endianflag)
Swap order of an INT number.
- [REAL endian_convert_real](#) (const [REAL](#) rnum, const [INT](#) vlength, const [INT](#) endianflag)
Swap order of a REAL number.

10.20.1 Detailed Description

Some utilities for format conversion.

10.20.2 Function Documentation

10.20.2.1 INT endian_convert_int (const INT *inum*, const INT *ilength*, const INT *endianflag*)

Swap order of an INT number.

Parameters

<i>inum</i>	An INT value
<i>ilength</i>	Length of INT: 2 for short, 4 for int, 8 for long
<i>endianflag</i>	If <i>endianflag</i> = 1, it returns <i>inum</i> itself If <i>endianflag</i> = 2, it returns the swapped <i>inum</i>

Returns

Value of *inum* or swapped *inum*

Author

Ziteng Wang

Date

2012-12-24

Definition at line 105 of file convert.c.

10.20.2.2 REAL endian_convert_real (const REAL *rnum*, const INT *ilength*, const INT *endianflag*)

Swap order of a REAL number.

Parameters

<i>rnum</i>	An REAL value
<i>ilength</i>	Length of INT: 2 for short, 4 for int, 8 for long
<i>endianflag</i>	If <i>endianflag</i> = 1, it returns <i>rnum</i> itself If <i>endianflag</i> = 2, it returns the swapped <i>rnum</i>

Returns

Value of *rnum* or swapped *rnum*

Author

Ziteng Wang

Date

2012-12-24

Definition at line 137 of file convert.c.

10.20.2.3 `double fasp_aux_bbyteToldouble (unsigned char bytes[])`

Swap order of double-precision float for different endian systems.

Parameters

<i>bytes</i>	A unsigned char
--------------	-----------------

Returns

Unsigend long ineger after swapping

Author

Chensong Zhang

Date

11/16/2009

Definition at line 74 of file convert.c.

10.20.2.4 unsigned long fasp_aux_change_endian4 (unsigned long x)

Swap order for different endian systems.

Parameters

<i>x</i>	An unsigned long integer
----------	--------------------------

Returns

Unsigend long ineger after swapping

Author

Chensong Zhang

Date

11/16/2009

Definition at line 25 of file convert.c.

10.20.2.5 double fasp_aux_change_endian8 (double x)

Swap order for different endian systems.

Parameters

<i>x</i>	A unsigned long integer
----------	-------------------------

Returns

Unsigend long ineger after swapping

Author

Chensong Zhang

Date

11/16/2009

Definition at line 43 of file convert.c.

10.21 doxygen.h File Reference

Main page for Doygen documentation.

10.21.1 Detailed Description

Main page for Doygen documentation.

10.22 eigen.c File Reference

Subroutines for computing the extreme eigenvalues.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [REAL fasp_dcsr_eig](#) (dCSRmat *A, const [REAL](#) tol, const [INT](#) maxit)
Approximate the largest eigenvalue of A by the power method.

10.22.1 Detailed Description

Subroutines for computing the extreme eigenvalues.

10.22.2 Function Documentation

10.22.2.1 [REAL fasp_dcsr_eig](#) (dCSRmat * A, const [REAL](#) tol, const [INT](#) maxit)

Approximate the largest eigenvalue of A by the power method.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
<i>tol</i>	Tolerance for stopping the power method
<i>maxit</i>	Max number of iterations

Returns

Largest eigenvalue

Author

Xiaozhe Hu

Date

01/25/2011

10.23 famg.c File Reference

Full AMG method as an iterative solver (main file)

```
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_solver_famg](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [AMG_param](#) *param)
Solve $Ax=b$ by full AMG.

10.23.1 Detailed Description

Full AMG method as an iterative solver (main file)

10.23.2 Function Documentation

10.23.2.1 void [fasp_solver_famg](#) ([dCSRmat](#) * A, [dvector](#) * b, [dvector](#) * x, [AMG_param](#) * param)

Solve $Ax=b$ by full AMG.

Parameters

<i>A</i>	Pointer to dCSRmat : the coefficient matrix
----------	---

<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>param</i>	Pointer to AMG_param : AMG parameters

Author

Xiaozhe Hu

Date

02/27/2011

Modified by Chensong Zhang on 01/10/2012 Modified by Chensong Zhang on 05/05/2013: Remove error handling for AMG setup

Definition at line 31 of file famg.c.

10.24 fasp.h File Reference

Main header file for FASP.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "fasp_const.h"
```

Data Structures

- struct [ddenmat](#)
Dense matrix of REAL type.
- struct [idenmat](#)
Dense matrix of INT type.
- struct [dCSRmat](#)
Sparse matrix of REAL type in CSR format.
- struct [iCSRmat](#)
Sparse matrix of INT type in CSR format.
- struct [dCOOmat](#)
Sparse matrix of REAL type in COO (or IJ) format.
- struct [iCOOmat](#)
Sparse matrix of INT type in COO (or IJ) format.
- struct [dCSRLmat](#)
Sparse matrix of REAL type in CSRL format.
- struct [dSTRmat](#)
Structure matrix of REAL type.
- struct [dvector](#)
Vector with n entries of REAL type.
- struct [ivector](#)
Vector with n entries of INT type.

- struct [ILU_param](#)
Parameters for ILU.
- struct [ILU_data](#)
Data for ILU setup.
- struct [Schwarz_param](#)
Parameters for Schwarz method.
- struct [Mumps_data](#)
Parameters for MUMPS interface.
- struct [Schwarz_data](#)
Data for Schwarz methods.
- struct [AMG_param](#)
Parameters for AMG solver.
- struct [AMG_data](#)
Data for AMG solvers.
- struct [precond_data](#)
Data passed to the preconditioners.
- struct [precond_data_str](#)
Data passed to the preconditioner for [dSTRmat](#) matrices.
- struct [precond_diagstr](#)
Data passed to diagonal preconditioner for [dSTRmat](#) matrices.
- struct [precond](#)
Preconditioner data and action.
- struct [mxv_matfree](#)
Matrix-vector multiplication, replace the actual matrix.
- struct [input_param](#)
Input parameters.
- struct [itsolver_param](#)
Parameters passed to iterative solvers.
- struct [grid2d](#)
Two dimensional grid data structure.
- struct [Link](#)
Struct for Links.
- struct [linked_list](#)
A linked list node.

Macros

- #define [__FASP_HEADER__](#)

10.24.1 Detailed Description

Main header file for FASP.

This header file contains general constants and data structures for FASP.

Note

Only define macros and data structures, no function declarations.

Created by Chensong Zhang on 08/12/2010. Modified by Chensong Zhang on 12/13/2011. Modified by Chensong Zhang on 12/25/2011. Modified by Chensong Zhang on 01/25/2015: clean up code Modified by Chensong Zhang on 01/27/2015: remove N2C, C2N, ISTART

Modified by Ludmil Zikatanov on 20151011: cosmetics.

10.24.2 Macro Definition Documentation

10.24.2.1 `#define __FASP_HEADER__`

indicate [fasp.h](#) has been included before

Definition at line 29 of file fasp.h.

10.24.2.2 `#define ABS(a) (((a)>=0.0)?(a):- (a))`

absolute value of a

Definition at line 67 of file fasp.h.

10.24.2.3 `#define DIAGONAL_PREF OFF`

order each row such that diagonal appears first

Definition at line 51 of file fasp.h.

10.24.2.4 `#define DLMALLOC OFF`

use dlmalloc instead of standard malloc

Definition at line 40 of file fasp.h.

10.24.2.5 `#define FASP_GSRB 1`

MG level 0 use RedBlack Gauss Seidel Smoothing

Definition at line 1161 of file fasp.h.

10.24.2.6 `#define FASP_USE_ILU ON`

enable ILU or not

Definition at line 39 of file fasp.h.

10.24.2.7 `#define FASP_VERSION 1.8`

For external software package support.

faspsolver version

Definition at line 38 of file fasp.h.

10.24.2.8 `#define GE(a, b) (((a)>=(b))?(TRUE):(FALSE))`

is $a \geq b$?

Definition at line 73 of file fasp.h.

10.24.2.9 `#define GT(a, b) (((a)>(b))?(TRUE):(FALSE))`

Definition of $>$, \geq , $<$, \leq , and `isnan`.

is $a > b$?

Definition at line 72 of file fasp.h.

10.24.2.10 `#define INT int`

regular integer type: int or long

Definition at line 57 of file fasp.h.

10.24.2.11 `#define ISNAN(a) (((a)!=a))?(TRUE):(FALSE))`

is $a == \text{NAN}$?

Definition at line 76 of file fasp.h.

10.24.2.12 `#define LE(a, b) (((a)<=(b))?(TRUE):(FALSE))`

is $a \leq b$?

Definition at line 75 of file fasp.h.

10.24.2.13 `#define LONG long`

long integer type

Definition at line 58 of file fasp.h.

10.24.2.14 `#define LONGLONG long long`

long integer type

Definition at line 59 of file fasp.h.

10.24.2.15 **#define LS(a, b) (((a)<(b))?(TRUE):(FALSE))**

is $a < b$?

Definition at line 74 of file fasp.h.

10.24.2.16 **#define MAX(a, b) (((a)>(b))?(a):(b))**

Definition of max, min, abs.

bigger one in a and b

Definition at line 65 of file fasp.h.

10.24.2.17 **#define MIN(a, b) (((a)<(b))?(a):(b))**

smaller one in a and b

Definition at line 66 of file fasp.h.

10.24.2.18 **#define NEDMALLOC OFF**

use nedmalloc instead of standard malloc

Definition at line 41 of file fasp.h.

10.24.2.19 **#define PUT_INT(A) printf("### DEBUG: %s = %d\n", #A, (A))**

Definition of print command in DEBUG mode.

print an integer

Definition at line 81 of file fasp.h.

10.24.2.20 **#define PUT_REAL(A) printf("### DEBUG: %s = %e\n", #A, (A))**

print a real num

Definition at line 82 of file fasp.h.

10.24.2.21 **#define REAL double**

float type

Definition at line 60 of file fasp.h.

10.24.2.22 **#define RS_C1 ON**

Flags for internal uses.

Warning

Change the following marcos with caution!CF splitting of RS: check C1 Criterion

Definition at line 49 of file fasp.h.

10.24.2.23 `#define SHORT short`

FASP integer and floating point numbers.

short integer type

Definition at line 56 of file fasp.h.

10.24.3 Typedef Documentation

10.24.3.1 `typedef struct dCOOmat dCOOmat`

Sparse matrix of REAL type in COO format

10.24.3.2 `typedef struct dCSRLmat dCSRLmat`

Sparse matrix of REAL type in CSRL format

10.24.3.3 `typedef struct dCSRmat dCSRmat`

Sparse matrix of REAL type in CSR format

10.24.3.4 `typedef struct ddenmat ddenmat`

Dense matrix of REAL type

10.24.3.5 `typedef struct dSTRmat dSTRmat`

Structured matrix of REAL type

10.24.3.6 `typedef struct dvector dvector`

Vector of REAL type

10.24.3.7 `typedef struct grid2d grid2d`

2D grid type for plotting

10.24.3.8 `typedef struct iCOOmat iCOOmat`

Sparse matrix of INT type in COO format

10.24.3.9 typedef struct iCSRmat iCSRmat

Sparse matrix of INT type in CSR format

10.24.3.10 typedef struct idenmat idenmat

Dense matrix of INT type

10.24.3.11 typedef struct ivector ivector

Vector of INT type

10.24.3.12 typedef ListElement* LinkList

List of linkslinked list

Definition at line 1156 of file fasp.h.

10.24.3.13 typedef struct linked_list ListElement

Linked element in list

10.24.3.14 typedef const grid2d* pcgrid2d

Grid in 2d

Definition at line 1110 of file fasp.h.

10.24.3.15 typedef grid2d* pgrid2d

Grid in 2d

Definition at line 1108 of file fasp.h.

Counter for multiple calls

10.24.4.2 INT* IMAP

Red Black Gs Smoother imap

10.24.4.3 INT MAXIMAP

Red Black Gs Smoother max DOFs of reservoir

10.24.4.4 INT nx_rb

Red Black Gs Smoother Nx

10.24.4.5 INT ny_rb

Red Black Gs Smoother Ny

10.24.4.6 INT nz_rb

Red Black Gs Smoother Nz

10.24.4.7 unsigned INT total_alloc_count

Total allocated memory amount.

total allocation times

Definition at line 35 of file memory.c.

10.24.4.8 unsigned INT total_alloc_mem

total allocated memory

Definition at line 34 of file memory.c.

10.25 fasp_block.h File Reference

Header file for FASP block matrices.

```
#include "fasp.h"
```

Data Structures

- struct [dBSRmat](#)
Block sparse row storage matrix of REAL type.
- struct [block_dCSRmat](#)
Block REAL CSR matrix format.
- struct [block_iCSRmat](#)
Block INT CSR matrix format.
- struct [block_dvector](#)
Block REAL vector structure.
- struct [block_ivector](#)
Block INT vector structure.
- struct [block_Reservoir](#)
Block REAL matrix format for reservoir simulation.
- struct [block_BSR](#)

Block REAL matrix format for reservoir simulation.

- struct [AMG_data_bsr](#)

Data for multigrid levels. (BSR format)

- struct [precond_diagbsr](#)

Data passed to diagonal preconditioner for [dBSRmat](#) matrices.

- struct [precond_data_bsr](#)

Data passed to the preconditioners.

- struct [precond_block_reservoir_data](#)

Data passed to the preconditioner for reservoir simulation problems.

- struct [precond_block_data](#)

Data passed to the preconditioner for block preconditioning for [block_dCSRmat](#) format.

- struct [precond_FASP_blkoi_data](#)

Data passed to the preconditioner for preconditioning reservoir simulation problems.

- struct [precond_sweeping_data](#)

Data passed to the preconditioner for sweeping preconditioning.

Macros

- #define [__FASPBLOCK_HEADER__](#)

- #define [SMOOTHER_BLKOil](#) 11

Definition of specialized smoother types.

- #define [SMOOTHER_SPETEN](#) 19

Typedefs

- typedef struct [dBSRmat](#) [dBSRmat](#)
- typedef struct [block_dCSRmat](#) [block_dCSRmat](#)

10.25.1 Detailed Description

Header file for FASP block matrices.

Note

This header file contains definitions of block matrices, including grid-major type and variable-major type. In this header, we only define macros and data structures, not function declarations.

Created by Chensong Zhang on 05/21/2010. Modified by Xiaozhe Hu on 05/28/2010: add [precond_block_↵_reservoir_data](#). Modified by Xiaozhe Hu on 06/15/2010: modify [precond_block_reservoir_data](#). Modified by Chensong Zhang on 10/11/2010: add BSR data. Modified by Chensong Zhang on 10/17/2012: modify comments.

Modified by Ludmil Zikatanov on 20151011: cosmetics.

10.25.2 Macro Definition Documentation

10.25.2.1 `#define __FASPBLOCK_HEADER__`

indicate [fasp_block.h](#) has been included before
Definition at line 22 of file `fasp_block.h`.

10.25.2.2 `#define SMOOTHER_BLKOil 11`

Definition of specialized smoother types.
Used in monolithic AMG for black-oil
Definition at line 27 of file `fasp_block.h`.

10.25.2.3 `#define SMOOTHER_SPETEN 19`

Used in monolithic AMG for black-oil
Definition at line 28 of file `fasp_block.h`.

10.25.3 Typedef Documentation

10.25.3.1 `typedef struct block_BSR block_BSR`

Block of BSR matrices of REAL type

10.25.3.2 `typedef struct block_dCSRmat block_dCSRmat`

Matrix of REAL type in Block CSR format

10.25.3.3 `typedef struct block_dvector block_dvector`

Vector of REAL type in Block format

10.25.3.4 `typedef struct block_iCSRmat block_iCSRmat`

Matrix of INT type in Block CSR format

10.25.3.5 `typedef struct block_ivec block_ivec`

Vector of INT type in Block format

10.25.3.6 `typedef struct block_Reservoir block_Reservoir`

Special block matrix for Reservoir Simulation

10.25.3.7 typedef struct dBSRmat dBSRmat

Matrix of REAL type in BSR format

10.25.3.8 typedef struct precondition_block_reservoir_data precondition_block_reservoir_data

Precond data for Reservoir Simulation

10.26 fasp_const.h File Reference

Definition of all kinds of messages, including error messages, solver types, etc.

Macros

- #define `FASP_SUCCESS` 0
Definition of return status and error messages.
- #define `ERROR_OPEN_FILE` -10

10.26.1 Detailed Description

Definition of all kinds of messages, including error messages, solver types, etc.

Note

This is internal use only. Do NOT change.

Created by Chensong Zhang on 03/20/2010. Modified by Chensong Zhang on 12/06/2011. Modified by Chensong Zhang on 12/25/2011. Modified by Chensong Zhang on 04/22/2012. Modified by Ludmil Zikatanov on 02/15/2013: CG -> SMOOTHER_CG. Modified by Chensong Zhang on 02/16/2013: GS -> SMOOTHER_GS, etc. Modified by Chensong Zhang on 04/09/2013: Add safe Krylov methods. Modified by Chensong Zhang on 09/22/2013: Clean up Doxygen.

Modified by Chensong Zhang on 09/17/2013: Filename changed from message.h.

10.26.2 Macro Definition Documentation

10.26.2.1 #define `AMLI_CYCLE` 3

AMLI-cycle

Definition at line 176 of file `fasp_const.h`.

10.26.2.2 #define `ASCEND` 12

Ascending order

Definition at line 230 of file `fasp_const.h`.

10.26.2.3 `#define BIGREAL 1e+20`

Some global constants.

A large real number

Definition at line 236 of file fasp_const.h.

10.26.2.4 `#define CF_ORDER 1`

C/F order smoothing

Definition at line 222 of file fasp_const.h.

10.26.2.5 `#define CGPT 1`

Coarse grid points

Definition at line 215 of file fasp_const.h.

10.26.2.6 `#define CLASSIC_AMG 1`

Definition of AMG types.

classic AMG

Definition at line 161 of file fasp_const.h.

10.26.2.7 `#define COARSE_AC 4`

Aggressive coarsening

Definition at line 199 of file fasp_const.h.

10.26.2.8 `#define COARSE_CR 3`

Compatible relaxation

Definition at line 198 of file fasp_const.h.

10.26.2.9 `#define COARSE_MIS 5`

Aggressive coarsening based on MIS

Definition at line 200 of file fasp_const.h.

10.26.2.10 `#define COARSE_RS 1`

Definition of coarsening types.

Classical

Definition at line 196 of file fasp_const.h.

10.26.2.11 #define COARSE_RSP 2

Classical, with positive offdiags

Definition at line 197 of file fasp_const.h.

10.26.2.12 #define CPFIRST 1

C-points first order

Definition at line 228 of file fasp_const.h.

10.26.2.13 #define DESCEND 21

Descending order

Definition at line 231 of file fasp_const.h.

10.26.2.14 #define ERROR_ALLOC_MEM -20

fail to allocate memory

Definition at line 37 of file fasp_const.h.

10.26.2.15 #define ERROR_AMG_COARSE_TYPE -32

unknown coarsening type

Definition at line 44 of file fasp_const.h.

10.26.2.16 #define ERROR_AMG_COARSEING -33

coarsening step failed to complete

Definition at line 45 of file fasp_const.h.

10.26.2.17 #define ERROR_AMG_INTERP_TYPE -30

unknown interpolation type

Definition at line 42 of file fasp_const.h.

10.26.2.18 #define ERROR_AMG_SMOOTH_TYPE -31

unknown smoother type

Definition at line 43 of file fasp_const.h.

10.26.2.19 #define ERROR_DATA_STRUCTURE -21

problem with data structures

Definition at line 38 of file fasp_const.h.

10.26.2.20 #define ERROR_DATA_ZERODIAG -22

matrix has zero diagonal entries

Definition at line 39 of file fasp_const.h.

10.26.2.21 #define ERROR_DUMMY_VAR -23

unexpected input data

Definition at line 40 of file fasp_const.h.

10.26.2.22 #define ERROR_INPUT_PAR -13

wrong input argument

Definition at line 31 of file fasp_const.h.

10.26.2.23 #define ERROR_LIC_TYPE -80

wrong license type

Definition at line 60 of file fasp_const.h.

10.26.2.24 #define ERROR_MAT_SIZE -15

wrong problem size

Definition at line 33 of file fasp_const.h.

10.26.2.25 #define ERROR_MISC -19

other error

Definition at line 35 of file fasp_const.h.

10.26.2.26 #define ERROR_NUM_BLOCKS -18

wrong number of blocks

Definition at line 34 of file fasp_const.h.

10.26.2.27 #define ERROR_OPEN_FILE -10

fail to open a file

Definition at line 29 of file fasp_const.h.

10.26.2.28 #define ERROR_QUAD_DIM -61

unsupported quadrature dim

Definition at line 58 of file fasp_const.h.

10.26.2.29 #define ERROR_QUAD_TYPE -60

unknown quadrature type

Definition at line 57 of file fasp_const.h.

10.26.2.30 #define ERROR_REGRESS -14

regression test fail

Definition at line 32 of file fasp_const.h.

10.26.2.31 #define ERROR_SOLVER_EXIT -49

solver does not quit successfully

Definition at line 55 of file fasp_const.h.

10.26.2.32 #define ERROR_SOLVER_ILUSETUP -45

ILU setup error

Definition at line 52 of file fasp_const.h.

10.26.2.33 #define ERROR_SOLVER_MAXIT -48

maximal iteration number exceeded

Definition at line 54 of file fasp_const.h.

10.26.2.34 #define ERROR_SOLVER_MISC -46

misc solver error during run time

Definition at line 53 of file fasp_const.h.

10.26.2.35 #define ERROR_SOLVER_PRECTYPE -41

unknown precond type

Definition at line 48 of file fasp_const.h.

10.26.2.36 #define ERROR_SOLVER_SOLSTAG -43

solver's solution is too small

Definition at line 50 of file fasp_const.h.

10.26.2.37 #define ERROR_SOLVER_STAG -42

solver stagnates

Definition at line 49 of file fasp_const.h.

10.26.2.38 #define ERROR_SOLVER_TOLSMALL -44

solver's tolerance is too small

Definition at line 51 of file fasp_const.h.

10.26.2.39 #define ERROR_SOLVER_TYPE -40

unknown solver type

Definition at line 47 of file fasp_const.h.

10.26.2.40 #define ERROR_UNKNOWN -99

an unknown error type

Definition at line 62 of file fasp_const.h.

10.26.2.41 #define ERROR_WRONG_FILE -11

input contains wrong format

Definition at line 30 of file fasp_const.h.

10.26.2.42 #define FALSE 0

logic FALSE

Definition at line 68 of file fasp_const.h.

10.26.2.43 #define FASP_SUCCESS 0

Definition of return status and error messages.

return from function successfully

Definition at line 27 of file fasp_const.h.

10.26.2.44 #define FGPT 0

Fine grid points

Definition at line 214 of file fasp_const.h.

10.26.2.45 #define FPFIRST -1

F-points first order

Definition at line 229 of file fasp_const.h.

10.26.2.46 #define GOPT -5

Type of vertices (DOFs) for coarsening.

Cannot fit in aggregates

Definition at line 212 of file fasp_const.h.

10.26.2.47 #define ILUk 1

Type of ILU methods.

ILUk

Definition at line 147 of file fasp_const.h.

10.26.2.48 #define ILUt 2

ILUt

Definition at line 148 of file fasp_const.h.

10.26.2.49 #define ILUtp 3

ILUtp

Definition at line 149 of file fasp_const.h.

10.26.2.50 #define INTERP_DIR 1

Definition of interpolation types.

Direct interpolation

Definition at line 205 of file fasp_const.h.

10.26.2.51 #define INTERP_ENG 3

energy minimization interpolation

Definition at line 207 of file fasp_const.h.

10.26.2.52 #define INTERP_STD 2

Standard interpolation

Definition at line 206 of file fasp_const.h.

10.26.2.53 #define ISPT 2

Isolated points

Definition at line 216 of file fasp_const.h.

10.26.2.54 #define MAT_bBSR 5

block matrix of BSR for bordered systems

Definition at line 94 of file fasp_const.h.

10.26.2.55 #define MAT_bCSR 4

block matrix of CSR

Definition at line 93 of file fasp_const.h.

10.26.2.56 #define MAT_BSR 2

block-wise compressed sparse row

Definition at line 91 of file fasp_const.h.

10.26.2.57 #define MAT_CSR 1

compressed sparse row

Definition at line 90 of file fasp_const.h.

10.26.2.58 #define MAT_CSRL 6

modified CSR to reduce cache missing

Definition at line 95 of file fasp_const.h.

10.26.2.59 #define MAT_FREE 0

Definition of matrix format.

matrix-free format: only mxv action

Definition at line 89 of file fasp_const.h.

10.26.2.60 #define MAT_STR 3

structured sparse matrix

Definition at line 92 of file fasp_const.h.

10.26.2.61 #define MAT_SymCSR 7

symmetric CSR format

Definition at line 96 of file fasp_const.h.

10.26.2.62 `#define MAX_AMG_LVL 20`

Maximal AMG coarsening level

Definition at line 240 of file fasp_const.h.

10.26.2.63 `#define MAX_CRATE 20.0`

Maximal coarsening ratio

Definition at line 243 of file fasp_const.h.

10.26.2.64 `#define MAX_REFINE_LVL 20`

Maximal refinement level

Definition at line 239 of file fasp_const.h.

10.26.2.65 `#define MAX_RESTART 20`

Maximal restarting number

Definition at line 244 of file fasp_const.h.

10.26.2.66 `#define MAX_STAG 20`

Maximal number of stagnation times

Definition at line 245 of file fasp_const.h.

10.26.2.67 `#define MIN_CDOF 20`

Minimal number of coarsest variables

Definition at line 241 of file fasp_const.h.

10.26.2.68 `#define MIN_CRATE 0.9`

Minimal coarsening ratio

Definition at line 242 of file fasp_const.h.

10.26.2.69 `#define NL_AMLI_CYCLE 4`

Nonlinear AMLI-cycle

Definition at line 177 of file fasp_const.h.

10.26.2.70 `#define NO_ORDER 0`

Definition of smoothing order.

Natural order smoothing

Definition at line 221 of file fasp_const.h.

10.26.2.71 `#define OFF 0`

turn off certain parameter

Definition at line 74 of file fasp_const.h.

10.26.2.72 `#define ON 1`

Definition of switch.

turn on certain parameter

Definition at line 73 of file fasp_const.h.

10.26.2.73 `#define OPENMP_HOLDS 2000`

Smallest size for OpenMP version

Definition at line 247 of file fasp_const.h.

10.26.2.74 `#define PAIRWISE 1`

Definition of aggregation types.

pairwise aggregation

Definition at line 168 of file fasp_const.h.

10.26.2.75 `#define PREC_AMG 2`

with AMG precondition

Definition at line 139 of file fasp_const.h.

10.26.2.76 `#define PREC_DIAG 1`

with diagonal precondition

Definition at line 138 of file fasp_const.h.

10.26.2.77 `#define PREC_FMG 3`

with full AMG precondition

Definition at line 140 of file fasp_const.h.

10.26.2.78 `#define PREC_ILU 4`

with ILU precondition

Definition at line 141 of file fasp_const.h.

10.26.2.79 `#define PREC_NULL 0`

Definition of preconditioner type for iterative methods.

with no precondition

Definition at line 137 of file fasp_const.h.

10.26.2.80 `#define PREC_SCHWARZ 5`

with Schwarz preconditioner

Definition at line 142 of file fasp_const.h.

10.26.2.81 `#define PRINT_ALL 10`

all: all printouts, including files

Definition at line 84 of file fasp_const.h.

10.26.2.82 `#define PRINT_MIN 1`

quiet: print error, important warnings

Definition at line 80 of file fasp_const.h.

10.26.2.83 `#define PRINT_MORE 4`

more: print some useful debug info

Definition at line 82 of file fasp_const.h.

10.26.2.84 `#define PRINT_MOST 8`

most: maximal printouts, no files

Definition at line 83 of file fasp_const.h.

10.26.2.85 `#define PRINT_NONE 0`

Print level for all subroutines – not including DEBUG output.

silent: no printout at all

Definition at line 79 of file fasp_const.h.

10.26.2.86 `#define PRINT_SOME 2`

some: print less important warnings

Definition at line 81 of file fasp_const.h.

10.26.2.87 #define SA_AMG 2

smoothed aggregation AMG

Definition at line 162 of file fasp_const.h.

10.26.2.88 #define SCHWARZ_BACKWARD 2

Backward ordering

Definition at line 155 of file fasp_const.h.

10.26.2.89 #define SCHWARZ_FORWARD 1

Type of Schwarz smoother.

Forward ordering

Definition at line 154 of file fasp_const.h.

10.26.2.90 #define SCHWARZ_SYMMETRIC 3

Symmetric smoother

Definition at line 156 of file fasp_const.h.

10.26.2.91 #define SMALLREAL 1e-20

A small real number

Definition at line 237 of file fasp_const.h.

10.26.2.92 #define SMALLREAL2 1e-40

An extremely small real number

Definition at line 238 of file fasp_const.h.

10.26.2.93 #define SMOOTHER_CG 4

CG as a smoother

Definition at line 185 of file fasp_const.h.

10.26.2.94 #define SMOOTHER_GS 2

Gauss-Seidel smoother

Definition at line 183 of file fasp_const.h.

10.26.2.95 #define SMOOTHER_GSOR 7

GS + SOR smoother

Definition at line 188 of file fasp_const.h.

10.26.2.96 #define SMOOTHER_JACOBI 1

Definition of standard smoother types.

Jacobi smoother

Definition at line 182 of file fasp_const.h.

10.26.2.97 #define SMOOTHER_L1DIAG 10

L1 norm diagonal scaling smoother

Definition at line 191 of file fasp_const.h.

10.26.2.98 #define SMOOTHER_POLY 9

Polynomial smoother

Definition at line 190 of file fasp_const.h.

10.26.2.99 #define SMOOTHER_SGS 3

Symmetric Gauss-Seidel smoother

Definition at line 184 of file fasp_const.h.

10.26.2.100 #define SMOOTHER_SGSOR 8

SGS + SSOR smoother

Definition at line 189 of file fasp_const.h.

10.26.2.101 #define SMOOTHER_SOR 5

SOR smoother

Definition at line 186 of file fasp_const.h.

10.26.2.102 #define SMOOTHER_SSOR 6

SSOR smoother

Definition at line 187 of file fasp_const.h.

10.26.2.103 #define SOLVER_AMG 21

AMG as an iterative solver

Definition at line 120 of file fasp_const.h.

10.26.2.104 #define SOLVER_BiCGstab 2

Bi-Conjugate Gradient Stabilized

Definition at line 104 of file fasp_const.h.

10.26.2.105 #define SOLVER_CG 1

Conjugate Gradient

Definition at line 103 of file fasp_const.h.

10.26.2.106 #define SOLVER_DEFAULT 0

Definition of solver types for iterative methods.

Use default solver in FASP

Definition at line 101 of file fasp_const.h.

10.26.2.107 #define SOLVER_FMG 22

Full AMG as an solver

Definition at line 121 of file fasp_const.h.

10.26.2.108 #define SOLVER_GCG 7

Generalized Conjugate Gradient

Definition at line 109 of file fasp_const.h.

10.26.2.109 #define SOLVER_GCR 8

Generalized Conjugate Residual

Definition at line 110 of file fasp_const.h.

10.26.2.110 #define SOLVER_GMRES 4

Generalized Minimal Residual

Definition at line 106 of file fasp_const.h.

10.26.2.111 `#define SOLVER_MinRes 3`

Minimal Residual

Definition at line 105 of file fasp_const.h.

10.26.2.112 `#define SOLVER_MUMPS 33`

MUMPS Direct Solver

Definition at line 125 of file fasp_const.h.

10.26.2.113 `#define SOLVER_SBiCGstab 12`

BiCGstab with safety net

Definition at line 113 of file fasp_const.h.

10.26.2.114 `#define SOLVER_SCG 11`

Conjugate Gradient with safety net

Definition at line 112 of file fasp_const.h.

10.26.2.115 `#define SOLVER_SGCG 17`

GCG with safety net

Definition at line 118 of file fasp_const.h.

10.26.2.116 `#define SOLVER_SGMRES 14`

GMRes with safety net

Definition at line 115 of file fasp_const.h.

10.26.2.117 `#define SOLVER_SMinRes 13`

MinRes with safety net

Definition at line 114 of file fasp_const.h.

10.26.2.118 `#define SOLVER_SUPERLU 31`

SuperLU Direct Solver

Definition at line 123 of file fasp_const.h.

10.26.2.119 `#define SOLVER_SVFGMRES 16`

Variable-restart FGMRES with safety net

Definition at line 117 of file fasp_const.h.

Subroutines for matrix format conversion.

```
#include "fasp.h"
#include "fasp_block.h"
#include "fasp_functs.h"
```

Functions

- **SHORT** `fasp_format_dcoo_dcsr` (`dCOOmat *A`, `dCSRmat *B`)
Transform a REAL matrix from its IJ format to its CSR format.
- **SHORT** `fasp_format_dcsr_dcoo` (`dCSRmat *A`, `dCOOmat *B`)
Transform a REAL matrix from its CSR format to its IJ format.
- **SHORT** `fasp_format_dstr_dcsr` (`dSTRmat *A`, `dCSRmat *B`)
Transfer a 'dSTRmat' type matrix into a 'dCSRmat' type matrix.
- `dCSRmat fasp_format_bdcsr_dcsr` (`block_dCSRmat *Ab`)
Form the whole dCSRmat A using blocks given in Ab.
- `dCSRLmat * fasp_format_dcsr_dcsr` (`dCSRmat *A`)
Convert a dCSRmat into a dCSRLmat.
- `dCSRmat fasp_format_dbsr_dcsr` (`dBSRmat *B`)
Transfer a 'dBSRmat' type matrix into a dCSRmat.
- `dBSRmat fasp_format_dcsr_dbsr` (`dCSRmat *A`, `const INT nb`)
Transfer a dCSRmat type matrix into a dBSRmat.
- `dBSRmat fasp_format_dstr_dbsr` (`dSTRmat *B`)
Transfer a 'dSTRmat' type matrix to a 'dBSRmat' type matrix.
- `dCOOmat * fasp_format_dbsr_dcoo` (`dBSRmat *B`)
Transfer a 'dBSRmat' type matrix to a 'dCOOmat' type matrix.

10.28.1 Detailed Description

Subroutines for matrix format conversion.

10.28.2 Function Documentation

10.28.2.1 `dCSRmat fasp_format_bdcsr_dcsr (block_dCSRmat * Ab)`

Form the whole `dCSRmat` A using blocks given in Ab.

Parameters

<code>Ab</code>	Pointer to <code>block_dCSRmat</code> matrix
-----------------	--

Returns

`dCSRmat` matrix if succeed, NULL if fail

Author

Shiquan Zhang

Date

08/10/2010

Definition at line 292 of file `formats.c`.

10.28.2.2 `dCOOmat * fasp_format_dbsr_dcoo (dBSRmat * B)`

Transfer a 'dBSRmat' type matrix to a 'dCOOmat' type matrix.

Parameters

B	Pointer to dBSRmat matrix
-----	---

Returns

Pointer to [dCOOmat](#) matrix

Author

Zhiyang Zhou

Date

2010/10/26

Definition at line 943 of file formats.c.

10.28.2.3 dCSRmat fasp_format_dbsr_dcsr (dBSRmat * B)

Transfer a '[dBSRmat](#)' type matrix into a [dCSRmat](#).

Parameters

B	Pointer to dBSRmat matrix
-----	---

Returns

[dCSRmat](#) matrix

Author

Zhiyang Zhou

Date

10/23/2010

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/24/2012

Note

Works for general nb (Xiaozhe)

Definition at line 495 of file formats.c.

10.28.2.4 SHORT fasp_format_dcoo_dcsr (dCOOmat * A , dCSRmat * B)

Transform a REAL matrix from its IJ format to its CSR format.

Parameters

<i>A</i>	Pointer to dCOOmat matrix
<i>B</i>	Pointer to dCSRmat matrix

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Author

Xuehai Huang

Date

08/10/2009

Definition at line 27 of file formats.c.

10.28.2.5 [dBSRmat](#) fasp_format_dcsr_dbsr ([dCSRmat](#) * *A*, const INT *nb*)

Transfer a [dCSRmat](#) type matrix into a [dBSRmat](#).

Parameters

<i>A</i>	Pointer to the dCSRmat type matrix
<i>nb</i>	size of each block

Returns

[dBSRmat](#) matrix

Author

Zheng Li

Date

03/27/2014

Note

modified by Xiaozhe Hu to avoid potential memory leakage problem

Definition at line 721 of file formats.c.

10.28.2.6 [SHORT](#) fasp_format_dcsr_dcoo ([dCSRmat](#) * *A*, [dCOOmat](#) * *B*)

Transform a REAL matrix from its CSR format to its IJ format.

Parameters

<i>A</i>	Pointer to dCSRmat matrix
<i>B</i>	Pointer to dCOOmat matrix

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Author

Xuehai Huang

Date

08/10/2009

Modified by Chunsheng Feng, Zheng Li

Date

10/12/2012

Definition at line 80 of file formats.c.

10.28.2.7 [dCSRLmat](#) * fasp_format_dcsr_dcsr ([dCSRmat](#) * *A*)

Convert a [dCSRmat](#) into a [dCSRLmat](#).

Parameters

<i>A</i>	Pointer to dCSRLmat matrix
----------	--

Returns

Pointer to [dCSRLmat](#) matrix

Author

Zhiyang Zhou

Date

2011/01/07

Definition at line 361 of file formats.c.

10.28.2.8 [dBSRmat](#) fasp_format_dstr_dbsr ([dSTRmat](#) * *B*)

Transfer a '[dSTRmat](#)' type matrix to a '[dBSRmat](#)' type matrix.

Parameters

<i>B</i>	Pointer to dSTRmat matrix
----------	---

Returns

[dBSRmat](#) matrix

Author

Zhiyang Zhou

Date

2010/10/26

Definition at line 839 of file formats.c.

10.28.2.9 **SHORT** fasp_format_dstr_dcsr ([dSTRmat](#) * *A*, [dCSRmat](#) * *B*)

Transfer a '[dSTRmat](#)' type matrix into a '[dCSRmat](#)' type matrix.

Parameters

<i>A</i>	Pointer to dSTRmat matrix
<i>B</i>	Pointer to dCSRmat matrix

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

10.29 **givens.c** File Reference

Givens transformation.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_aux_givens](#) (const [REAL](#) beta, [dCSRmat](#) *H, [dvector](#) *y, [REAL](#) *tmp)
Perform Givens rotations to compute $y \mid \beta e_1 - H * y$.

10.29.1 Detailed Description

Givens transformation.

10.29.2 Function Documentation

10.29.2.1 void fasp_aux_givens (const REAL *beta*, dCSRmat * *H*, dvector * *y*, REAL * *tmp*)

Perform Givens rotations to compute $y \mid \beta e_1 - H y \mid$.

Parameters

<i>beta</i>	Norm of residual r_0
<i>H</i>	Upper Hessenberg dCSRmat matrix: $(m+1)*m$
<i>y</i>	Minimizer of $\mid \beta e_1 - H y \mid$
<i>tmp</i>	Temporary work array

10.30 gmg_poisson.c File Reference

GMG method as an iterative solver for Poisson Problem.

```
#include <time.h>
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "gmg_util.inl"
```

Functions

- INT fasp_poisson_gmg_1D (REAL *u, REAL *b, const INT nx, const INT maxlevel, const REAL rtol, const SHORT prtlvl)
Solve $Ax=b$ of Poisson 1D equation by Geometric Multigrid Method.
- INT fasp_poisson_gmg_2D (REAL *u, REAL *b, const INT nx, const INT ny, const INT maxlevel, const REAL rtol, const SHORT prtlvl)
Solve $Ax=b$ of Poisson 2D equation by Geometric Multigrid Method.
- INT fasp_poisson_gmg_3D (REAL *u, REAL *b, const INT nx, const INT ny, const INT nz, const INT maxlevel, const REAL rtol, const SHORT prtlvl)
Solve $Ax=b$ of Poisson 3D equation by Geometric Multigrid Method.
- void fasp_poisson_fgmg_1D (REAL *u, REAL *b, const INT nx, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 1D equation by Geometric Multigrid Method (Full Multigrid)

- void fasp_poisson_fgmg_2D (REAL *u, REAL *b, const INT nx, const INT ny, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 2D equation by Geometric Multigrid Method (Full Multigrid)

- void fasp_poisson_fgmg_3D (REAL *u, REAL *b, const INT nx, const INT ny, const INT nz, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 3D equation by Geometric Multigrid Method (Full Multigrid)

- INT fasp_poisson_pcg_gmg_1D (REAL *u, REAL *b, const INT nx, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 1D equation by Geometric Multigrid Method (GMG preconditioned Conjugate Gradient method)

- INT fasp_poisson_pcg_gmg_2D (REAL *u, REAL *b, const INT nx, const INT ny, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 2D equation by Geometric Multigrid Method (GMG preconditioned Conjugate Gradient method)

- INT fasp_poisson_pcg_gmg_3D (REAL *u, REAL *b, const INT nx, const INT ny, const INT nz, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 3D equation by Geometric Multigrid Method (GMG preconditioned Conjugate Gradient method)

10.30.1 Detailed Description

GMG method as an iterative solver for Poisson Problem.

10.30.2 Function Documentation

10.30.2.1 void fasp_poisson_fgmg_1D (REAL * u, REAL * b, const INT nx, const INT maxlevel, const REAL rtol, const SHORT prtlvl)

Solve $Ax=b$ of Poisson 1D equation by Geometric Multigrid Method (Full Multigrid)

Parameters

<i>u</i>	Pointer to the vector of dofs
<i>b</i>	Pointer to the vector of right hand side
<i>nx</i>	Number of grids in x direction
<i>maxlevel</i>	Maximum levels of the multigrid
<i>rtol</i>	Relative tolerance to judge convergence
<i>prtlvl</i>	Print level for output

10.31 graphics.c File Reference

Subroutines for graphical output.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_dcsr_subplot](#) (const [dCSRmat](#) *A, const char *filename, [INT](#) size)
Write sparse matrix pattern in BMP file format.
- void [fasp_dbsr_subplot](#) (const [dBSRmat](#) *A, const char *filename, [INT](#) size)
Write sparse matrix pattern in BMP file format.
- void [fasp_grid2d_plot](#) ([pgrid2d](#) pg, [INT](#) level)
Output grid to a EPS file.
- [INT](#) [fasp_dbsr_plot](#) (const [dBSRmat](#) *A, const char *fname)
Write dBSR sparse matrix pattern in BMP file format.
- [INT](#) [fasp_dcsr_plot](#) (const [dCSRmat](#) *A, const char *fname)
Write dCSR sparse matrix pattern in BMP file format.

10.31.1 Detailed Description

Subroutines for graphical output.

10.31.2 Function Documentation

10.31.2.1 void [fasp_dbsr_plot](#) (const [dBSRmat](#) * A, const char * filename)

Write dBSR sparse matrix pattern in BMP file format.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>filename</i>	File name

Author

Chunsheng Feng

Date

11/16/2013

Note

The routine `fasp_dbsr_plot` writes pattern of the specified [dBSRmat](#) matrix in uncompressed BMP file format (Windows bitmap) to a binary file whose name is specified by the character string `filename`.

Each pixel corresponds to one matrix element. The pixel colors have the following meaning:

White structurally zero element Black zero element Blue positive element Red negative element Brown nearly zero element

Definition at line 469 of file `graphics.c`.

10.31.2.2 void fasp_dbsr_subplot (const dBSRmat * A, const char * filename, INT size)

Write sparse matrix pattern in BMP file format.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>filename</i>	File name
<i>size</i>	size*size is the picture size for the picture

Author

Chunsheng Feng

Date

11/16/2013

Note

The routine `fasp_dbsr_subplot` writes pattern of the specified [dBSRmat](#) matrix in uncompressed BMP file format (Windows bitmap) to a binary file whose name is specified by the character string `filename`.

Each pixel corresponds to one matrix element. The pixel colors have the following meaning:

White structurally zero element Black zero element Blue positive element Red negative element Brown nearly zero element

Definition at line 105 of file `graphics.c`.

10.31.2.3 INT fasp_dcsr_plot (const dCSRmat * A, const char * fname)

Write dCSR sparse matrix pattern in BMP file format.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>fname</i>	File name to plot to

Author

Chunsheng Feng

Date

11/16/2013

Note

The routine `fasp_dcsr_plot` writes pattern of the specified `dCSRmat` matrix in uncompressed BMP file format (Windows bitmap) to a binary file whose name is specified by the character string `filename`.

Each pixel corresponds to one matrix element. The pixel colors have the following meaning:

White structurally zero element Black zero element Blue positive element Red negative element Brown nearly zero element

Definition at line 628 of file `graphics.c`.

10.31.2.4 `void fasp_dcsr_subplot (const dCSRmat * A, const char * filename, INT size)`

Write sparse matrix pattern in BMP file format.

Parameters

<i>A</i>	Pointer to the <code>dCSRmat</code> matrix
<i>filename</i>	File name
<i>size</i>	<code>size*size</code> is the picture size for the picture

Author

Chensong Zhang

Date

03/29/2009

Note

The routine `fasp_dcsr_subplot` writes pattern of the specified `dCSRmat` matrix in uncompressed BMP file format (Windows bitmap) to a binary file whose name is specified by the character string `filename`.

Each pixel corresponds to one matrix element. The pixel colors have the following meaning:

White structurally zero element Blue positive element Red negative element Brown nearly zero element

Definition at line 44 of file `graphics.c`.

10.31.2.5 `void fasp_grid2d_plot (pgrid2d pg, INT level)`

Output grid to a EPS file.

Parameters

<i>pg</i>	Pointer to grid in 2d
-----------	-----------------------

<i>level</i>	Number of levels
--------------	------------------

- void [ilut_](#) (const [INT](#) *n, [REAL](#) *a, [INT](#) *ja, [INT](#) *ia, [INT](#) *lfil, const [REAL](#) *droptol, [REAL](#) *alu, [INT](#) *jlu, [INT](#) *iwk, [INT](#) *ierr, [INT](#) *nz)
- void [ilutp_](#) (const [INT](#) *n, [REAL](#) *a, [INT](#) *ja, [INT](#) *ia, [INT](#) *lfil, const [REAL](#) *droptol, const [REAL](#) *permtol, const [INT](#) *mbloc, [REAL](#) *alu, [INT](#) *jlu, [INT](#) *iwk, [INT](#) *ierr, [INT](#) *nz)
- [SHORT fasp_ilu_dcsr_setup](#) ([dCSRmat](#) *A, [ILU_data](#) *iludata, [ILU_param](#) *iluparam)

Get ILU decomposition of a CSR matrix A.

10.33.1 Detailed Description

Setup incomplete LU decomposition for [dCSRmat](#) matrices.

10.33.2 Function Documentation

10.33.2.1 [SHORT fasp_ilu_dcsr_setup](#) ([dCSRmat](#) * A, [ILU_data](#) * *iludata*, [ILU_param](#) * *iluparam*)

Get ILU decomposition of a CSR matrix A.

Parameters

<i>A</i>	Pointer to dCSRmat matrix
<i>iludata</i>	Pointer to ILU_data
<i>iluparam</i>	Pointer to ILU_param

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Author

Shiquan Zhang Xiaozhe Hu

Date

12/27/2009

Definition at line 50 of file ilu_setup_csr.c.

10.34 ilu_setup_str.c File Reference

Setup incomplete LU decomposition for [dSTRmat](#) matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_ilu_dstr_setup0](#) ([dSTRmat](#) *A, [dSTRmat](#) *LU)
Get ILU(0) decomposition of a structured matrix A.
- void [fasp_ilu_dstr_setup1](#) ([dSTRmat](#) *A, [dSTRmat](#) *LU)
Get ILU(1) decoposition of a structured matrix A.

10.34.1 Detailed Description

Setup incomplete LU decomposition for [dSTRmat](#) matrices.

10.34.2 Function Documentation

10.34.2.1 void [fasp_ilu_dstr_setup0](#) ([dSTRmat](#) * A, [dSTRmat](#) * LU)

Get ILU(0) decomposition of a structured matrix A.

Parameters

<i>A</i>	Pointer to dSTRmat
<i>LU</i>	Pointer to ILU structured matrix of REAL type

Author

Shiquan Zhang, Xiaozhe Hu

Date

11/08/2010

Note

Only works for 5 bands 2D and 7 bands 3D matrix with default offsets (order can be arbitrary)!

Definition at line 28 of file `ilu_setup_str.c`.

10.34.2.2 `void fasp_ilu_dstr_setup1 (dSTRmat * A, dSTRmat * LU)`

Get ILU(1) decoposition of a structured matrix A.

Parameters

<i>A</i>	Pointer to original structured matrix of REAL type
<i>LU</i>	Pointer to ILU structured matrix of REAL type

Author

Shiquan Zhang, Xiaozhe Hu

Date

11/08/2010

Note

put L and U in a STR matrix and it has the following structure: the diag is d, the offdiag of L are alpha1 to alpha6, the offdiag of U are beta1 to beta6

Only works for 5 bands 2D and 7 bands 3D matrix with default offsets

Definition at line 319 of file `ilu_setup_str.c`.

10.35 `init.c` File Reference

Initialize important data structures.

```
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void `fasp_precond_data_null` (`precond_data` *pcdata)
Initialize `precond_data`.
- `AMG_data` * `fasp_amg_data_create` (`SHORT` max_levels)
Create and initialize `AMG_data` for classical and SA AMG.
- `AMG_data_bsr` * `fasp_amg_data_bsr_create` (`SHORT` max_levels)
Create and initialize `AMG_data` data sturcture for AMG/SAMG (BSR format)
- void `fasp_ilu_data_alloc` (const `INT` iwk, const `INT` nwork, `ILU_data` *iludata)
Allocate workspace for ILU factorization.
- void `fasp_Schwarz_data_free` (`Schwarz_data` *Schwarz)
Free `Schwarz_data` data memeory space.
- void `fasp_amg_data_free` (`AMG_data` *mgl, `AMG_param` *param)
Free `AMG_data` data memeory space.
- void `fasp_amg_data_bsr_free` (`AMG_data_bsr` *mgl)
Free `AMG_data_bsr` data memeory space.
- void `fasp_ilu_data_free` (`ILU_data` *ILUdata)
Create `ILU_data` sturcture.
- void `fasp_ilu_data_null` (`ILU_data` *ILUdata)
Initialize ILU data.
- void `fasp_precond_null` (`precond` *pcdata)
Initialize `precond` data.

10.35.1 Detailed Description

Initialize important data structures.

Note

Every structures should be initialized before usage.

10.35.2 Function Documentation

10.35.2.1 `AMG_data_bsr` * `fasp_amg_data_bsr_create` (`SHORT` max_levels)

Create and initialize `AMG_data` data sturcture for AMG/SAMG (BSR format)

Parameters

<code>max_levels</code>	Max number of levels allowed
-------------------------	------------------------------

Returns

Pointer to the `AMG_data` data structure

Author

Xiaozhe Hu

Date

08/07/2011

Definition at line 86 of file init.c.

10.35.2.2 void fasp_amg_data_bsr_free (AMG_data_bsr * mgl)

Free [AMG_data_bsr](#) data memeory space.

Parameters

<i>mgl</i>	Pointer to the AMG_data_bsr
------------	---

Author

Xiaozhe Hu

Date

2013/02/13

Definition at line 249 of file init.c.

10.35.2.3 AMG_data * fasp_amg_data_create (SHORT max_levels)

Create and initialize [AMG_data](#) for classical and SA AMG.

Parameters

<i>max_levels</i>	Max number of levels allowed
-------------------	------------------------------

Returns

Pointer to the [AMG_data](#) data structure

Author

Chensong Zhang

Date

2010/04/06

Definition at line 56 of file init.c.

10.35.2.4 void fasp_amg_data_free (AMG_data * mgl, AMG_param * param)

Free [AMG_data](#) data memeory space.

Parameters

<i>mgl</i>	Pointer to the AMG_data
<i>param</i>	Pointer to AMG parameters

Author

Chensong Zhang

Date

2010/04/06

Modified by Chensong Zhang on 05/05/2013: Clean up param as well!

Definition at line 184 of file init.c.

10.35.2.5 void fasp_ilu_data_alloc (const INT *iwk*, const INT *nwork*, ILU_data * *iludata*)

Allocate workspace for ILU factorization.

Parameters

<i>iwk</i>	Size of the index array
<i>nwork</i>	Size of the work array
<i>iludata</i>	Pointer to the ILU_data

Author

Chensong Zhang

Date

2010/04/06

Definition at line 118 of file init.c.

10.35.2.6 void fasp_ilu_data_free (ILU_data * *ILUdata*)

Create [ILU_data](#) sturcture.

Parameters

<i>ILUdata</i>	Pointer to ILU_data
----------------	-------------------------------------

Author

Chensong Zhang

Date

2010/04/03

Definition at line 293 of file init.c.

10.35.2.7 void fasp_ilu_data_null (ILU_data * *ILUdata*)

Initialize ILU data.

Parameters

<i>ILUdata</i>	Pointer to ILU_data
----------------	-------------------------------------

Author

Chensong Zhang

Date

2010/03/23

Definition at line 314 of file init.c.

10.35.2.8 void fasp_precond_data_null (**precond_data** * *pcdata*)

Initialize [precond_data](#).

Parameters

<i>pcdata</i>	Preconditioning data structure
---------------	--------------------------------

Author

Chensong Zhang

Date

2010/03/23

Definition at line 25 of file init.c.

10.35.2.9 void fasp_precond_null (**precond** * *pcdata*)

Initialize precondition data.

Parameters

<i>pcdata</i>	Pointer to precondition
---------------	-------------------------

Author

Chensong Zhang

Date

2010/03/23

Definition at line 330 of file init.c.

10.35.2.10 void fasp_Schwarz_data_free (**Schwarz_data** * *Schwarz*)

Free [Schwarz_data](#) data memory space.

Parameters

<i>*Schwarz</i>	pointer to the AMG_data data
-----------------	--

Author

Xiaozhe Hu

Date

2010/04/06

Definition at line 147 of file init.c.

10.36 input.c File Reference

Read input parameters.

```
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [SHORT fasp_param_check](#) ([input_param](#) *inparam)
Simple check on input parameters.
- void [fasp_param_input](#) (const char *filenm, [input_param](#) *inparam)
Read input parameters from disk file.

10.36.1 Detailed Description

Read input parameters.

10.36.2 Function Documentation

10.36.2.1 [SHORT fasp_param_check](#) ([input_param](#) * *inparam*)

Simple check on input parameters.

Parameters

<i>inparam</i>	Input parameters
----------------	------------------

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Author

Chensong Zhang

Date

09/29/2013

Definition at line 25 of file input.c.

10.36.2.2 void fasp_param_input (const char * *filenm*, input_param * *inparam*)

Read input parameters from disk file.

Parameters

<i>filenm</i>	File name for input file
<i>inparam</i>	Input parameters

Author

Chensong Zhang

Date

03/20/2010

Modified by Xiaozhe Hu on 01/23/2011: add AMLI cycle Modified by Chensong Zhang on 01/10/2012 Modified by Ludmil Zikatanov on 02/15/2013 Modified by Chensong Zhang on 05/10/2013: add a new input. Modified by Chensong Zhang on 03/23/2015: skip unknown keyword.

Definition at line 102 of file input.c.

10.37 interface_mumps.c File Reference

Interface to MUMPS direct solvers.

```
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Macros

- #define ICNTL(*l*) icntl[*l*]-1]

Functions

- int fasp_solver_mumps (dCSRmat *ptrA, dvector *b, dvector *u, const SHORT prtlvl)
Solve $Ax=b$ by MUMPS directly.
- int fasp_solver_mumps_steps (dCSRmat *ptrA, dvector *b, dvector *u, Mumps_data *mumps)
Solve $Ax=b$ by MUMPS in three steps.

10.37.1 Detailed Description

Interface to MUMPS direct solvers.

Reference for MUMPS: <http://mumps.enseeiht.fr/>

10.37.2 Macro Definition Documentation

10.37.2.1 `#define ICNTL(I) icntl[(I)-1]`

macro s.t. indices match documentation

Definition at line 17 of file interface_mumps.c.

10.37.3 Function Documentation

10.37.3.1 `int fasp_solver_mumps (dCSRmat * ptrA, dvector * b, dvector * u, const SHORT prtlvl)`

Solve $Ax=b$ by MUMPS directly.

Parameters

<i>ptrA</i>	Pointer to a dCSRmat matrix
<i>b</i>	Pointer to the dvector of right-hand side term
<i>u</i>	Pointer to the dvector of solution
<i>prtlvl</i>	Output level

Author

Chunsheng Feng

Date

02/27/2013

Modified by Chensong Zhang on 02/27/2013 for new FASP function names.

Definition at line 39 of file interface_mumps.c.

10.37.3.2 `int fasp_solver_mumps_steps (dCSRmat * ptrA, dvector * b, dvector * u, Mumps_data * mumps)`

Solve $Ax=b$ by MUMPS in three steps.

Parameters

<i>ptrA</i>	Pointer to a dCSRmat matrix
<i>b</i>	Pointer to the dvector of right-hand side term
<i>u</i>	Pointer to the dvector of solution
<i>mumps</i>	Pointer to MUMPS data

Author

Chunsheng Feng

Date

02/27/2013

Modified by Chensong Zhang on 02/27/2013 for new FASP function names. Modified by Zheng Li on 10/10/2014 to adjust input parameters.

Definition at line 169 of file interface_mumps.c.

10.38 interface_samg.c File Reference

Interface to SAMG solvers.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [dvector2SAMGInput](#) ([dvector](#) *vec, char *filename)
Write a dvector to disk file in SAMG format (coordinate format)
- [INT dCSRmat2SAMGInput](#) ([dCSRmat](#) *A, char *filefrm, char *fileamg)
Write SAMG Input data from a sparse matrix of CSR format.

10.38.1 Detailed Description

Interface to SAMG solvers.

Reference for SAMG: <http://www.scai.fraunhofer.de/geschaeftsfelder/nuso/produkte/samg.html>

Warning

This interface has *only* been tested for SAMG24a1 (2010 version)!

10.38.2 Function Documentation

10.38.2.1 INT dCSRmat2SAMGInput ([dCSRmat](#) * A, char * *filefrm*, char * *fileamg*)

Write SAMG Input data from a sparse matrix of CSR format.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
<i>filefrm</i>	Name of the .frm file
<i>fileamg</i>	Name of the .amg file

Author

Zhiyang Zhou

Date

2010/08/25

Definition at line 59 of file interface_samg.c.

10.38.2.2 void dvector2SAMGInput (dvector * vec, char * filename)

Write a dvector to disk file in SAMG format (coordinate format)

Parameters

<i>vec</i>	Pointer to the dvector
<i>filename</i>	File name for input

Author

Zhiyang Zhou

Date

08/25/2010

Definition at line 30 of file interface_samg.c.

10.39 interface_superlu.c File Reference

Interface to SuperLU direct solvers.

```
#include <stdio.h>
#include <stdlib.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- int [fasp_solver_superlu](#) (dCSRmat *ptrA, dvector *b, dvector *u, const SHORT prtlvl)
Solve $Au=b$ by SuperLU.

10.39.1 Detailed Description

Interface to SuperLU direct solvers.

Reference for SuperLU: <http://crd-legacy.lbl.gov/~xiaoye/SuperLU/>

10.39.2 Function Documentation

10.39.2.1 int fasp_solver_superlu (dCSRmat * ptrA, dvector * b, dvector * u, const SHORT prtlvl)

Solve $Au=b$ by SuperLU.

Parameters

<i>ptrA</i>	Pointer to a dCSRmat matrix
<i>b</i>	Pointer to the dvector of right-hand side term
<i>u</i>	Pointer to the dvector of solution
<i>prtlvl</i>	Output level

Author

Xiaozhe Hu

10.41 interpolation.c File Reference

Interpolation operators for AMG.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_amg_interp](#) ([dCSRmat](#) *A, [ivector](#) *vertices, [dCSRmat](#) *P, [iCSRmat](#) *S, [AMG_param](#) *param)
Generate interpolation operator P.
- void [fasp_amg_interp1](#) ([dCSRmat](#) *A, [ivector](#) *vertices, [dCSRmat](#) *P, [AMG_param](#) *param, [iCSRmat](#) *S, [INT](#) *icor_ysk)
Generate interpolation operator P.
- void [fasp_amg_interp_trunc](#) ([dCSRmat](#) *P, [AMG_param](#) *param)
Truncation step for prolongation operators.

10.41.1 Detailed Description

Interpolation operators for AMG.

Note

Ref U. Trottenberg, C. W. Oosterlee, and A. Schuller "Multigrid (Appendix A: An Intro to Algebraic Multigrid)" Academic Press Inc., San Diego, CA, 2001 With contributions by A. Brandt, P. Oswald and K. Stuben.

10.41.2 Function Documentation

10.41.2.1 void [fasp_amg_interp](#) ([dCSRmat](#) * A, [ivector](#) * vertices, [dCSRmat](#) * P, [iCSRmat](#) * S, [AMG_param](#) * param)

Generate interpolation operator P.

Parameters

<i>A</i>	Pointer to dCSRmat : the coefficient matrix (index starts from 0)
<i>vertices</i>	Indicator vector for the C/F splitting of the variables
<i>P</i>	Prolongation (input: nonzero pattern, output: prolongation)
<i>S</i>	Strong connection matrix
<i>param</i>	AMG parameters

10.43 io.c File Reference

Matrix/vector input/output subroutines.

```
#include "fasp.h"
#include "fasp_functs.h"
#include "hb_io.h"
```

Functions

- void [fasp_dcsrvec1_read](#) (const char *filename, [dCSRmat](#) *A, [dvector](#) *b)
Read A and b from a SINGLE disk file.
- void [fasp_dcsrvec2_read](#) (const char *filemat, const char *filerhs, [dCSRmat](#) *A, [dvector](#) *b)
Read A and b from two disk files.
- void [fasp_dcsr_read](#) (const char *filename, [dCSRmat](#) *A)
Read A from matrix disk file in IJ format.
- void [fasp_dcoo_read](#) (const char *filename, [dCSRmat](#) *A)
Read A from matrix disk file in IJ format – indices starting from 0.
- void [fasp_dcoo1_read](#) (const char *filename, [dCOOmat](#) *A)
Read A from matrix disk file in IJ format – indices starting from 1.
- void [fasp_dcoo_shift_read](#) (const char *filename, [dCSRmat](#) *A)
Read A from matrix disk file in IJ format – indices starting from 0.
- void [fasp_dmtx_read](#) (const char *filename, [dCSRmat](#) *A)
Read A from matrix disk file in MatrixMarket general format.
- void [fasp_dmtxsym_read](#) (const char *filename, [dCSRmat](#) *A)
Read A from matrix disk file in MatrixMarket sym format.
- void [fasp_dstr_read](#) (const char *filename, [dSTRmat](#) *A)
Read A from a disk file in [dSTRmat](#) format.
- void [fasp_dbsr_read](#) (const char *filename, [dBSRmat](#) *A)

- Read A from a disk file in dBSRmat format.*

 - void `fasp_dvecind_read` (const char *filename, `dvector` *b)
- Read b from matrix disk file.*

 - void `fasp_dvec_read` (const char *filename, `dvector` *b)
- Read b from a disk file in array format.*

 - void `fasp_ivecind_read` (const char *filename, `ivector` *b)
- Read b from matrix disk file.*

 - void `fasp_ivec_read` (const char *filename, `ivector` *b)
- Read b from a disk file in array format.*

 - void `fasp_dcsrvec1_write` (const char *filename, `dCSRmat` *A, `dvector` *b)
- Write A and b to a SINGLE disk file.*

 - void `fasp_dcsrvec2_write` (const char *filemat, const char *filerhs, `dCSRmat` *A, `dvector` *b)
- Write A and b to two disk files.*

 - void `fasp_dcoo_write` (const char *filename, `dCSRmat` *A)
- Write a matrix to disk file in IJ format (coordinate format)*

 - void `fasp_dstr_write` (const char *filename, `dSTRmat` *A)
- Write a dSTRmat to a disk file.*

 - void `fasp_dbsr_write` (const char *filename, `dBSRmat` *A)
- Write a dBSRmat to a disk file.*

 - void `fasp_dvec_write` (const char *filename, `dvector` *vec)
- Write a dvector to disk file.*

 - void `fasp_dvecind_write` (const char *filename, `dvector` *vec)
- Write a dvector to disk file in coordinate format.*

 - void `fasp_ivec_write` (const char *filename, `ivector` *vec)
- Write a ivector to disk file in coordinate format.*

 - void `fasp_dvec_print` (INT n, `dvector` *u)
- Print first n entries of a vector of REAL type.*

 - void `fasp_ivec_print` (INT n, `ivector` *u)
- Print first n entries of a vector of INT type.*

 - void `fasp_dcsr_print` (`dCSRmat` *A)
- Print out a dCSRmat matrix in coordinate format.*

 - void `fasp_dcoo_print` (`dCOOmat` *A)
- Print out a dCOOmat matrix in coordinate format.*

 - void `fasp_dbsr_print` (`dBSRmat` *A)
- Print out a dBSRmat matrix in coordinate format.*

 - void `fasp_dbsr_write_coo` (const char *filename, const `dBSRmat` *A)
- Print out a dBSRmat matrix in coordinate format for matlab spy.*

 - void `fasp_dcsr_write_coo` (const char *filename, const `dCSRmat` *A)
- Print out a dCSRmat matrix in coordinate format for matlab spy.*

 - void `fasp_dstr_print` (`dSTRmat` *A)
- Print out a dSTRmat matrix in coordinate format.*

 - void `fasp_matrix_read` (const char *filename, void *A)
- Read matrix from different kinds of formats from both ASCII and binary files.*

 - void `fasp_matrix_read_bin` (const char *filename, void *A)
- Read matrix in binary format.*

 - void `fasp_matrix_write` (const char *filename, void *A, INT flag)
- write matrix from different kinds of formats from both ASCII and binary files*

- void [fasp_vector_read](#) (const char *filerhs, void *b)
Read RHS vector from different kinds of formats from both ASCII and binary files.
- void [fasp_vector_write](#) (const char *filerhs, void *b, [INT](#) flag)
write RHS vector from different kinds of formats in both ASCII and binary files
- void [fasp_hb_read](#) (const char *input_file, [dCSRmat](#) *A, [dvector](#) *b)
Read matrix and right-hans side from a HB format file.

Variables

- [INT](#) ilength
- [INT](#) dlength

10.43.1 Detailed Description

Matrix/vector input/output subroutines.

Note

Read, write or print a matrix or a vector in various formats.

10.43.2 Function Documentation

10.43.2.1 void [fasp_dbsr_print](#) ([dBSRmat](#) * A)

Print out a [dBSRmat](#) matrix in coordinate format.

Parameters

A	Pointer to the dBSRmat matrix A
-------------------	---

Author

Ziteng Wang

Date

12/24/2012

Modified by Chunsheng Feng on 11/16/2013

Definition at line 1444 of file io.c.

10.43.2.2 void [fasp_dbsr_read](#) (const char * *filename*, [dBSRmat](#) * A)

Read A from a disk file in [dBSRmat](#) format.

Parameters

<i>filename</i>	File name for matrix A
<i>A</i>	Pointer to the dBSRmat A

Note

This routine reads a [dBSRmat](#) matrix from a disk file in the following format:

File format:

- ROW, COL, NNZ
- nb: size of each block
- storage_manner: storage manner of each block
- ROW+1: length of IA
- IA(i), i=0:ROW
- NNZ: length of JA
- JA(i), i=0:NNZ-1
- NNZ*nb*nb: length of val
- val(i), i=0:NNZ*nb*nb-1

Author

Xiaozhe Hu

Date

10/29/2010

Definition at line 691 of file io.c.

10.43.2.3 void fasp_dbsr_write (const char * *filename*, [dBSRmat](#) * *A*)

Write a [dBSRmat](#) to a disk file.

Parameters

<i>filename</i>	File name for A
<i>A</i>	Pointer to the dBSRmat matrix A

Note

The routine writes the specified REAL vector in BSR format.
Refer to the reading subroutine \ref fasp_dbsr_read.

Author

Shiquan Zhang

Date

10/29/2010

Definition at line 1202 of file io.c.

10.43.2.4 void fasp_dbsr_write_coo (const char * *filename*, const [dBSRmat](#) * *A*)

Print out a [dBSRmat](#) matrix in coordinate format for matlab spy.

Parameters

<i>filename</i>	Name of file to write to
<i>A</i>	Pointer to the dBSRmat matrix <i>A</i>

Author

Chunsheng Feng

Date

11/14/2013

Modified by Chensong Zhang on 06/14/2014: Fix index problem.

Definition at line 1481 of file io.c.

10.43.2.5 `void fasp_dcoo1_read (const char * filename, dCOOmat * A)`

Read *A* from matrix disk file in IJ format – indices starting from 1.

Parameters

<i>filename</i>	File name for matrix
<i>A</i>	Pointer to the COO matrix

Note

File format:

- `nrow ncol nnz` % number of rows, number of columns, and nnz
- `i j a_ij` % `i, j a_ij` in each line

difference between `fasp_dcoo_read` and this function is this function do not change to CSR format

Author

Xiaozhe Hu

Date

03/24/2013

Definition at line 369 of file io.c.

10.43.2.6 `void fasp_dcoo_print (dCOOmat * A)`

Print out a [dCOOmat](#) matrix in coordinate format.

Parameters

<i>A</i>	Pointer to the dCOOmat matrix <i>A</i>
----------	--

Author

Ziteng Wang

Date

12/24/2012

Definition at line 1423 of file io.c.

10.43.2.7 void fasp_dcoo_read (const char * *filename*, [dCSRmat](#) * *A*)

Read *A* from matrix disk file in IJ format – indices starting from 0.

Parameters

<i>filename</i>	File name for matrix
<i>A</i>	Pointer to the CSR matrix

Note

File format:

- nrow ncol nnz % number of rows, number of columns, and nnz
- i j a_ij % i, j a_ij in each line

After reading, it converts the matrix to [dCSRmat](#) format.

Author

Xuehai Huang, Chensong Zhang

Date

03/29/2009

Definition at line 318 of file io.c.

10.43.2.8 void fasp_dcoo_shift_read (const char * *filename*, [dCSRmat](#) * *A*)

Read *A* from matrix disk file in IJ format – indices starting from 0.

Parameters

<i>filename</i>	File name for matrix
<i>A</i>	Pointer to the CSR matrix

Note

File format:

- nrow ncol nnz % number of rows, number of columns, and nnz
- i j a_ij % i, j a_ij in each line

i and j suppose to start with index 1!!!

After read in, it shifts the index to C fashin and converts the matrix to [dCSRmat](#) format.

Author

Xiaozhe Hu

Date

04/01/2014

Definition at line 420 of file io.c.

10.43.2.9 void fasp_dcoo_write (const char * *filename*, dCSRmat * *A*)

Write a matrix to disk file in IJ format (coordinate format)

Parameters

<i>A</i>	pointer to the dCSRmat matrix
<i>filename</i>	char for vector file name

Note

The routine writes the specified REAL vector in COO format.
Refer to the reading subroutine \ref fasp_dcoo_read.

File format:

- The first line of the file gives the number of rows, the number of columns, and the number of nonzeros.
- Then gives nonzero values in i j a(i,j) format.

Author

Chensong Zhang

Date

03/29/2009

Definition at line 1102 of file io.c.

10.43.2.10 void fasp_dcsr_print (dCSRmat * *A*)

Print out a [dCSRmat](#) matrix in coordinate format.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix A
----------	---

Author

Xuehai Huang

Date

03/29/2009

Definition at line 1401 of file io.c.

10.43.2.11 void fasp_dcsr_read (const char * *filename*, [dCSRmat](#) * *A*)

Read A from matrix disk file in IJ format.

Parameters

<i>*filename</i>	char for matrix file name
<i>*A</i>	pointer to the CSR matrix

Author

Ziteng Wang

Date

12/25/2012

Definition at line 257 of file io.c.

10.43.2.12 void fasp_dcsr_write_coo (const char * *filename*, const [dCSRmat](#) * *A*)

Print out a [dCSRmat](#) matrix in coordinate format for matlab spy.

Parameters

<i>filename</i>	Name of file to write to
<i>A</i>	Pointer to the dCSRmat matrix A

Author

Chunsheng Feng

Date

11/14/2013

Definition at line 1531 of file io.c.

10.43.2.13 void fasp_dcsrvec1_read (const char * *filename*, [dCSRmat](#) * *A*, [dvector](#) * *b*)

Read A and b from a SINGLE disk file.

Parameters

<i>filename</i>	File name
<i>A</i>	Pointer to the CSR matrix
<i>b</i>	Pointer to the dvector

Note

This routine reads a [dCSRmat](#) matrix and a dvector vector from a single disk file.

The difference between this and `fasp_dcoovec_read` is that this routine support non-square matrices.

File format:

- `nrow ncol` % number of rows and number of columns
- `ia(j), j=0:nrow` % row index
- `ja(j), j=0:nnz-1` % column index
- `a(j), j=0:nnz-1` % entry value
- `n` % number of entries
- `b(j), j=0:n-1` % entry value

Author

Xuehai Huang

Date

03/29/2009

Modified by Chensong Zhang on 03/14/2012

Definition at line 86 of file `io.c`.

10.43.2.14 `void fasp_dcsrvec1_write (const char * filename, dCSRmat * A, dvector * b)`

Write *A* and *b* to a SINGLE disk file.

Parameters

<i>filename</i>	File name
<i>A</i>	Pointer to the CSR matrix
<i>b</i>	Pointer to the dvector

Note

This routine writes a [dCSRmat](#) matrix and a dvector vector to a single disk file.

File format:

- `nrow ncol` % number of rows and number of columns
- `ia(j), j=0:nrow` % row index
- `ja(j), j=0:nnz-1` % column index
- `a(j), j=0:nnz-1` % entry value
- `n` % number of entries
- `b(j), j=0:n-1` % entry value

Author

Feiteng Huang

Date

05/19/2012

Modified by Chensong on 12/26/2012

Definition at line 953 of file io.c.

10.43.2.15 void fasp_dcsrvec2_read (const char * *filemat*, const char * *filerhs*, dCSRmat * *A*, dvector * *b*)

Read A and b from two disk files.

Parameters

<i>filemat</i>	File name for matrix
<i>filerhs</i>	File name for right-hand side
<i>A</i>	Pointer to the dCSR matrix
<i>b</i>	Pointer to the dvector

Note

This routine reads a dCSRmat matrix and a dvector vector from a disk file.

CSR matrix file format:

- nrow % number of columns (rows)
- ia(j), j=0:nrow % row index
- ja(j), j=0:nnz-1 % column index
- a(j), j=0:nnz-1 % entry value

RHS file format:

- n % number of entries
- b(j), j=0:nrow-1 % entry value

Indices start from 1, NOT 0!!!

10.43.2.16 void fasp_dcsrvec2_write (const char * *filemat*, const char * *filerhs*, dCSRmat * *A*, dvector * *b*)

Write A and b to two disk files.

Parameters

<i>filemat</i>	File name for matrix
<i>filerhs</i>	File name for right-hand side
<i>A</i>	Pointer to the dCSR matrix
<i>b</i>	Pointer to the dvector

Note

This routine writes a dCSRmat matrix and a dvector vector to two disk files.

CSR matrix file format:

- nrow % number of columns (rows)
- ia(j), j=0:nrow % row index
- ja(j), j=0:nnz-1 % column index
- a(j), j=0:nnz-1 % entry value

RHS file format:

- n % number of entries
- b(j), j=0:nrow-1 % entry value

Indices start from 1, NOT 0!!!

10.43.2.17 void fasp_dmtx_read (const char * *filename*, dCSRmat * *A*)

Read A from matrix disk file in MatrixMarket general format.

Parameters

<i>filename</i>	File name for matrix
<i>A</i>	Pointer to the CSR matrix

Note

File format: This routine reads a MatrixMarket general matrix from a mtx file. And it converts the matrix to dCS↵
Rmat format. For details of mtx format, please refer to <http://math.nist.gov/MatrixMarket/>.

Indices start from 1, NOT 0!!!

Author

Chensong Zhang

09/05/2011

Definition at line 472 of file io.c.

10.43.2.18 void fasp_dmtxsym_read (const char * *filename*, dCSRmat * *A*)

Read A from matrix disk file in MatrixMarket sym format.

Parameters

<i>filename</i>	File name for matrix
<i>A</i>	Pointer to the CSR matrix

Note

File format: This routine reads a MatrixMarket symmetric matrix from a mtx file. And it converts the matrix to **dCSRmat** format. For details of mtx format, please refer to <http://math.nist.gov/MatrixMarket/>.

Indices start from 1, NOT 0!!!

Definition at line 534 of file io.c.

10.43.2.19 void fasp_dstr_print (**dSTRmat** * *A*)

Print out a **dSTRmat** matrix in coordinate format.

Parameters

<i>A</i>	Pointer to the dSTRmat matrix <i>A</i>
----------	---

Author

Ziteng Wang

Date

12/24/2012

Definition at line 1570 of file io.c.

10.43.2.20 void fasp_dstr_read (const char * *filename*, **dSTRmat** * *A*)

Read *A* from a disk file in **dSTRmat** format.

Parameters

<i>filename</i>	File name for the matrix
<i>A</i>	Pointer to the dSTRmat

Note

This routine reads a [dSTRmat](#) matrix from a disk file. After done, it converts the matrix to [dCSRmat](#) format.
File format:

- nx, ny, nz
- nc: number of components
- nband: number of bands
- n: size of diagonal, you must have diagonal
- diag(j), j=0:n-1
- offset, length: offset and length of off-diag1
- offdiag(j), j=0:length-1

Author

Xuehai Huang

03/29/2009

Definition at line 611 of file io.c.

10.43.2.21 void fasp_dstr_write (const char * *filename*, dSTRmat * *A*)

Write a [dSTRmat](#) to a disk file.

Parameters

<i>filename</i>	File name for A
<i>A</i>	Pointer to the dSTRmat matrix A

Note

The routine writes the specified REAL vector in STR format.
Refer to the reading subroutine \ref fasp_dstr_read.

Author

Shiquan Zhang

Date

03/29/2010

Definition at line 1142 of file io.c.

10.43.2.22 void fasp_dvec_print (INT *n*, dvector * *u*)

Print first n entries of a vector of REAL type.

Parameters

<i>n</i>	An interger (if n=0, then print all entries)
<i>u</i>	Pointer to a dvector

Author

Chensong Zhang

Date

03/29/2009

Definition at line 1362 of file io.c.

10.43.2.23 void fasp_dvec_read (const char * *filename*, dvector * *b*)

Read b from a disk file in array format.

Parameters

<i>filename</i>	File name for vector b
<i>b</i>	Pointer to the dvector b (output)

Note

File Format:

- nrow
- val_j, j=0:nrow-1

Author

Chensong Zhang

Date

03/29/2009

Definition at line 810 of file io.c.

10.43.2.24 void fasp_dvec_write (const char * *filename*, dvector * *vec*)

Write a dvector to disk file.

Parameters

<i>vec</i>	Pointer to the dvector
<i>filename</i>	File name

Author

Xuehai Huang

Date

03/29/2009

Definition at line 1257 of file io.c.

10.43.2.25 void fasp_dvecind_read (const char * *filename*, dvector * *b*)

Read *b* from matrix disk file.

Parameters

<i>filename</i>	File name for vector <i>b</i>
<i>b</i>	Pointer to the dvector <i>b</i> (output)

Note

File Format:

- *nrow*
- *ind_j*, *val_j*, *j*=0:*nrow*-1

Because the index is given, order is not important!

Author

Chensong Zhang

Date

03/29/2009

Definition at line 760 of file io.c.

10.43.2.26 void fasp_dvecind_write (const char * *filename*, dvector * *vec*)

Write a dvector to disk file in coordinate format.

Parameters

<i>vec</i>	Pointer to the dvector
<i>filename</i>	File name

Note

The routine writes the specified REAL vector in IJ format.

- The first line of the file is the length of the vector;
- After that, each line gives index and value of the entries.

Author

Xuehai Huang

Date

03/29/2009

Definition at line 1293 of file io.c.

10.43.2.27 fasp_hb_read (const char * *input_file*, dCSRmat * *A*, dvector * *b*)

Read matrix and right-hans side from a HB format file.

Parameters

<i>input_file</i>	File name of vector file
<i>A</i>	Pointer to the matrix
<i>b</i>	Pointer to the vector

Note

Modified from the c code hb_io_prb.c by John Burkardt

10.43.2.28 void fasp_ivec_print (INT *n*, ivector * *u*)

Print first *n* entries of a vector of INT type.

Parameters

<i>n</i>	An interger (if <i>n</i> =0, then print all entries)
<i>u</i>	Pointer to an ivector

Author

Chensong Zhang

Date

03/29/2009

Definition at line 1382 of file io.c.

10.43.2.29 void fasp_ivec_read (const char * *filename*, ivector * *b*)

Read *b* from a disk file in array format.

Parameters

<i>filename</i>	File name for vector <i>b</i>
<i>b</i>	Pointer to the dvector <i>b</i> (output)

Note

File Format:

- *nrow*
- *val_j*, *j*=0:*nrow*-1

Author

Xuehai Huang

Date

03/29/2009

Definition at line 902 of file io.c.

10.43.2.30 void fasp_ivec_write (const char * *filename*, ivector * *vec*)

Write a ivector to disk file in coordinate format.

Parameters

<i>vec</i>	Pointer to the dvector
<i>filename</i>	File name

Note

The routine writes the specified INT vector in IJ format.

- The first line of the file is the length of the vector;
- After that, each line gives index and value of the entries.

Author

Xuehai Huang

Date

03/29/2009

Definition at line 1328 of file io.c.

10.43.2.31 void fasp_ivecind_read (const char * *filename*, ivector * *b*)

Read b from matrix disk file.

Parameters

<i>filename</i>	File name for vector b
<i>b</i>	Pointer to the dvector b (output)

Note

File Format:

- nrow
- ind_j, val_j ... j=0:nrow-1

Author

Chensong Zhang

Date

03/29/2009

Definition at line 862 of file io.c.

10.43.2.32 fasp_matrix_read (const char * *filemat*, void * *A*)

Read matrix from different kinds of formats from both ASCII and binary files.

Parameters

<i>filemat</i>	File name of matrix file
<i>A</i>	Pointer to the matrix

Note

Flags for matrix file format:

- fileflag % fileflag = 1: binary, fileflag = 0000: ASCII
- formatflag % a 3-digit number for internal use, see below
- matrix % different types of matrix

Meaning of formatflag:

- matrixflag % first digit of formatflag
 - matrixflag = 1: CSR format
 - matrixflag = 2: BSR format
 - matrixflag = 3: STR format
 - matrixflag = 4: COO format
 - matrixflag = 5: MTX format
 - matrixflag = 6: MTX symmetrical format
- ilength % third digit of formatflag, length of INT
- dlength % fourth digit of formatflag, length of REAL

Definition at line 1604 of file io.c.

10.43.2.33 void fasp_matrix_read_bin (const char * *filemat*, void * *A*)

Read matrix in binary format.

Parameters

<i>filemat</i>	File name of matrix file
<i>A</i>	Pointer to the matrix

Author

Xiaozhe Hu

Date

04/14/2013

Modified by Chensong Zhang on 05/01/2013: Use it to read binary files!!!

Definition at line 1709 of file io.c.

10.43.2.34 fasp_matrix_write (const char * *filemat*, void * *A*, INT *flag*)

write matrix from different kinds of formats from both ASCII and binary files

Parameters

<i>filemat</i>	File name of matrix file
<i>A</i>	Pointer to the matrix
<i>flag</i>	Type of file and matrix, a 3-digit number

Note

Meaning of flag:

- fileflag % fileflag = 1: binary, fileflag = 0: ASCII
- matrixflag
 - matrixflag = 1: CSR format
 - matrixflag = 2: BSR format
 - matrixflag = 3: STR format

Matrix file format:

- fileflag % fileflag = 1: binary, fileflag = 0000: ASCII
- formatflag % a 3-digit number
- matrixflag % different kinds of matrix judged by formatflag

Author

Ziteng Wang

Date

12/24/2012

Definition at line 1783 of file io.c.

10.43.2.35 fasp_vector_read (const char * *filerhs*, void * *b*)

Read RHS vector from different kinds of formats from both ASCII and binary files.

Parameters

<i>filerhs</i>	File name of vector file
<i>b</i>	Pointer to the vector

Note

Matrix file format:

- fileflag % fileflag = 1: binary, fileflag = 0000: ASCII
- formatflag % a 3-digit number
- vector % different kinds of vector judged by formatflag

Meaning of formatflag:

- vectorflag % first digit of formatflag
 - vectorflag = 1: dvec format
 - vectorflag = 2: ivec format
 - vectorflag = 3: dvecind format
 - vectorflag = 4: ivecind format
- ilength % second digit of formatflag, length of INT
- dlength % third digit of formatflag, length of REAL

Definition at line 1876 of file io.c.

10.43.2.36 `fasp_vector_write (const char * filerhs, void * b, INT flag)`

write RHS vector from different kinds of formats in both ASCII and binary files

Parameters

<i>filerhs</i>	File name of vector file
<i>b</i>	Pointer to the vector
<i>flag</i>	Type of file and vector, a 2-digit number

Note

Meaning of the flags

- fileflag % fileflag = 1: binary, fileflag = 0: ASCII
- vectorflag
 - vectorflag = 1: dvec format
 - vectorflag = 2: ivec format
 - vectorflag = 3: dvecind format
 - vectorflag = 4: ivecind format

Matrix file format:

- fileflag % fileflag = 1: binary, fileflag = 0000: ASCII
- formatflag % a 2-digit number
- vectorflag % different kinds of vector judged by formatflag

10.44 itsolver_bcsr.c File Reference

Iterative solvers for [block_dCSRmat](#) matrices.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_block.h"
#include "fasp_functs.h"
#include "itsolver_util.inl"
```

Functions

- [INT fasp_solver_bdcsr_itsolver](#) ([block_dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, [itsolver_param](#) *itparam)
Solve $Ax = b$ by standard Krylov methods.
- [INT fasp_solver_bdcsr_krylov](#) ([block_dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam)
Solve $Ax = b$ by standard Krylov methods.

- `INT fasp_solver_bdcsr_krylov_block_3 (block_dCSRmat *A, dvector *b, dvector *x, itsolver_param *itparam, AMG_param *amgparam, dCSRmat *A_diag)`
Solve $Ax = b$ by standard Krylov methods.
- `INT fasp_solver_bdcsr_krylov_block_4 (block_dCSRmat *A, dvector *b, dvector *x, itsolver_param *itparam, AMG_param *amgparam, dCSRmat *A_diag)`
Solve $Ax = b$ by standard Krylov methods.
- `INT fasp_solver_bdcsr_krylov_sweeping (block_dCSRmat *A, dvector *b, dvector *x, itsolver_param *itparam, INT NumLayers, block_dCSRmat *Ai, dCSRmat *local_A, ivector *local_index)`
Solve $Ax = b$ by standard Krylov methods.

10.44.1 Detailed Description

Iterative solvers for `block_dCSRmat` matrices.

10.44.2 Function Documentation

10.44.2.1 `INT fasp_solver_bdcsr_itsolver (block_dCSRmat * A, dvector * b, dvector * x, precondition * pc, itsolver_param * itparam)`

Solve $Ax = b$ by standard Krylov methods.

Parameters

<i>A</i>	Pointer to the coeff matrix in <code>block_dCSRmat</code> format
<i>b</i>	Pointer to the right hand side in dvector format
<i>x</i>	Pointer to the approx solution in dvector format
<i>pc</i>	Pointer to the preconditioning action
<i>itparam</i>	Pointer to parameters for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.

Author

Chensong Zhang

11/25/2010

Definition at line 36 of file `itsolver_bcsr.c`.

10.44.2.2 `INT fasp_solver_bdcsr_krylov (block_dCSRmat * A, dvector * b, dvector * x, itsolver_param * itparam)`

Solve $Ax = b$ by standard Krylov methods.

Parameters

<i>A</i>	Pointer to the coeff matrix in block_dCSRmat format
<i>b</i>	Pointer to the right hand side in dvector format
<i>x</i>	Pointer to the approx solution in dvector format
<i>itparam</i>	Pointer to parameters for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.

Iterative solvers for [dBSRmat](#) matrices.

```
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "itsolver_util.inl"
```

Functions

- [INT fasp_solver_dbsr_itsolver](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, [itsolver_param](#) *itparam)
Solve $Ax=b$ by preconditioned Krylov methods for BSR matrices.
- [INT fasp_solver_dbsr_krylov](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam)
Solve $Ax=b$ by standard Krylov methods for BSR matrices.
- [INT fasp_solver_dbsr_krylov_diag](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam)
Solve $Ax=b$ by diagonal preconditioned Krylov methods.
- [INT fasp_solver_dbsr_krylov_ilu](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [ILU_param](#) *iluparam)
Solve $Ax=b$ by ILUs preconditioned Krylov methods.
- [INT fasp_solver_dbsr_krylov_amg](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [AMG_param](#) *amgparam)
Solve $Ax=b$ by AMG preconditioned Krylov methods.
- [INT fasp_solver_dbsr_krylov_amg_nk](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [AMG_param](#) *amgparam, [dCSRmat](#) *A_nk, [dCSRmat](#) *P_nk, [dCSRmat](#) *R_nk)
Solve $Ax=b$ by AMG with extra near kernel solve preconditioned Krylov methods.
- [INT fasp_solver_dbsr_krylov_nk_amg](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [AMG_param](#) *amgparam, const [INT](#) nk_dim, [dvector](#) *nk)
Solve $Ax=b$ by AMG preconditioned Krylov methods with extra kernal space.

10.45.1 Detailed Description

Iterative solvers for [dBSRmat](#) matrices.

10.45.2 Function Documentation

10.45.2.1 [INT fasp_solver_dbsr_itsolver](#) ([dBSRmat](#) * A, [dvector](#) * b, [dvector](#) * x, [precond](#) * pc, [itsolver_param](#) * itparam)

Solve $Ax=b$ by preconditioned Krylov methods for BSR matrices.

Parameters

A	Pointer to the coeff matrix in dBSRmat format
b	Pointer to the right hand side in dvector format

<i>x</i>	Pointer to the approx solution in dvector format
<i>pc</i>	Pointer to the preconditioning action
<i>itparam</i>	Pointer to parameters for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.

Iterative solvers for [dCSRmat](#) matrices.

```
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "itsolver_util.inl"
```

Functions

- [INT fasp_solver_dcsr_itsolver](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, [itsolver_param](#) *itparam)
Solve $Ax=b$ by preconditioned Krylov methods for CSR matrices.
- [INT fasp_solver_dcsr_krylov](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam)
Solve $Ax=b$ by standard Krylov methods for CSR matrices.
- [INT fasp_solver_dcsr_krylov_diag](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam)
Solve $Ax=b$ by diagonal preconditioned Krylov methods.
- [INT fasp_solver_dcsr_krylov_Schwarz](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [Schwarz_param](#) *schparam)
Solve $Ax=b$ by overlapping Schwarz Krylov methods.
- [INT fasp_solver_dcsr_krylov_amg](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [itsolver_param](#) *itparam, [AMG_param](#) *amgparam)
Solve $Ax=b$ by AMG preconditioned Krylov methods.

- `INT fasp_solver_dcsr_krylov_ilu` (`dCSRmat *A`, `dvector *b`, `dvector *x`, `itsolver_param *itparam`, `ILU_param *iluparam`)

Solve $Ax=b$ by ILUs preconditioned Krylov methods.

- `INT fasp_solver_dcsr_krylov_ilu_M` (`dCSRmat *A`, `dvector *b`, `dvector *x`, `itsolver_param *itparam`, `ILU_param *iluparam`, `dCSRmat *M`)

Solve $Ax=b$ by ILUs preconditioned Krylov methods: ILU of M as preconditioner.

- `INT fasp_solver_dcsr_krylov_amg_nk` (`dCSRmat *A`, `dvector *b`, `dvector *x`, `itsolver_param *itparam`, `AMG_param *amgparam`, `dCSRmat *A_nk`, `dCSRmat *P_nk`, `dCSRmat *R_nk`)

Solve $Ax=b$ by AMG preconditioned Krylov methods with an extra near kernel solve.

10.46.1 Detailed Description

Iterative solvers for `dCSRmat` matrices.

10.46.2 Function Documentation

- 10.46.2.1 `INT fasp_solver_dcsr_itsolver` (`dCSRmat *A`, `dvector *b`, `dvector *x`, `precond *pc`, `itsolver_param *itparam`)

Solve $Ax=b$ by preconditioned Krylov methods for CSR matrices.

Parameters

<code>A</code>	Pointer to the coeff matrix in <code>dCSRmat</code> format
<code>b</code>	Pointer to the right hand side in <code>dvector</code> format
<code>x</code>	Pointer to the approx solution in <code>dvector</code> format
<code>pc</code>	Pointer to the preconditioning action
<code>itparam</code>	Pointer to parameters for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.

10.48.2.4 INT fasp_solver_dstr_krylov_diag (dSTRmat * *A*, dvector * *b*, dvector * *x*, itsolver_param * *itparam*)

Solve $Ax=b$ by diagonal preconditioned Krylov methods.

Parameters

<i>A</i>	Pointer to the coeff matrix in dSTRmat format
<i>b</i>	Pointer to the right hand side in dvector format
<i>x</i>	Pointer to the approx solution in dvector format
<i>itparam</i>	Pointer to parameters for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.

10.48.2.5 INT fasp_solver_dstr_krylov_ilu (dSTRmat * *A*, dvector * *b*, dvector * *x*, itsolver_param * *itparam*, ILU_param * *iluparam*)

Solve $Ax=b$ by structured ILU preconditioned Krylov methods.

Parameters

<i>A</i>	Pointer to the coeff matrix in dSTRmat format
<i>b</i>	Pointer to the right hand side in dvector format
<i>x</i>	Pointer to the approx solution in dvector format
<i>itparam</i>	Pointer to parameters for iterative solvers
<i>iluparam</i>	Pointer to parameters for ILU

Returns

Iteration number if converges; ERROR otherwise.

10.49 lu.c File Reference

LU decomposition and direct solver for small dense matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [SHORT fasp_smat_lu_decomp](#) ([REAL](#) *A, [INT](#) pivot[], const [INT](#) n)
LU decomposition of A usind Doolittle's method.
- [SHORT fasp_smat_lu_solve](#) ([REAL](#) *A, [REAL](#) b[], [INT](#) pivot[], [REAL](#) x[], const [INT](#) n)
Solving $Ax=b$ using LU decomposition.

10.49.1 Detailed Description

LU decomposition and direct solver for small dense matrices.

10.49.2 Function Documentation

10.49.2.1 SHORT fasp_smat_lu_decomp (REAL * A, INT pivot[], const INT n)

LU decomposition of A usind Doolittle's method.

Parameters

<i>A</i>	Pointer to the full matrix
<i>pivot</i>	Pivoting positions
<i>n</i>	Size of matrix A

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Note

Use Doolittle's method to decompose the $n \times n$ matrix A into a unit lower triangular matrix L and an upper triangular matrix U such that $A = LU$. The matrices L and U replace the matrix A. The diagonal elements of L are 1 and are not stored.

The Doolittle method with partial pivoting is: Determine the pivot row and interchange the current row with the pivot row, then assuming that row k is the current row, $k = 0, \dots, n-1$ evaluate in order the following pair of expressions $U[k][j] = A[k][j] - (L[k][0]*U[0][j] + \dots + L[k][k-1]*U[k-1][j])$ for $j = k, k+1, \dots, n-1$ $L[i][k] = (A[i][k] - (L[i][0]*U[0][k] + \dots + L[i][k-1]*U[k-1][k])) / U[k][k]$ for $i = k+1, \dots, n-1$.

Author

Xuehai Huang

Date

04/02/2009

Definition at line 46 of file lu.c.

10.49.2.2 `SHORT fasp_smat_lu_solve (REAL * A, REAL b[], INT pivot[], REAL x[], const INT n)`

Solving $Ax=b$ using LU decomposition.

Parameters

<i>A</i>	Pointer to the full matrix
<i>b</i>	Right hand side array
<i>pivot</i>	Pivoting positions
<i>x</i>	Pointer to the solution array
<i>n</i>	Size of matrix A

Returns

FASP_SUCCESS if succeeded; otherwise, error information.

Note

This routine uses Doolittle's method to solve the linear equation $Ax = b$. This routine is called after the matrix A has been decomposed into a product of a unit lower triangular matrix L and an upper triangular matrix U with pivoting. The solution proceeds by solving the linear equation $Ly = b$ for y and subsequently solving the linear equation $Ux = y$ for x.

10.50 memory.c File Reference

Memory allocation and deallocation subroutines.

```
#include "fasp.h"
```

Functions

- void * [fasp_mem_calloc](#) (LONGLONG size, INT type)
*1M = 1024*1024*
- void * [fasp_mem_realloc](#) (void *oldmem, LONGLONG tsize)
Reallocate, initiate, and check memory.
- void [fasp_mem_free](#) (void *mem)
Free up previous allocated memory body.
- void [fasp_mem_usage](#) ()
Show total allocated memory currently.
- [SHORT fasp_mem_check](#) (void *ptr, const char *message, INT ERR)
Check wether a point is null or not.
- [SHORT fasp_mem_iludata_check](#) (ILU_data *iludata)
Check wether a ILU_data has enough work space.
- [SHORT fasp_mem_dcsr_check](#) (dCSRmat *A)
Check wether a dCSRmat A has sucessfully allocated memory.

Variables

- unsigned [INT total_alloc_mem](#) = 0
- unsigned [INT total_alloc_count](#) = 0
Total allocated memory amount.
- const [INT Million](#) = 1048576
Total number of allocations.

10.50.1 Detailed Description

Memory allocation and deallocation subroutines.

10.50.2 Function Documentation

10.50.2.1 void * fasp_mem_malloc (**LONGLONG** *size*, **INT** *type*)

1M = 1024*1024

Allocate, initiate, and check memory

Parameters

<i>size</i>	Number of memory blocks
<i>type</i>	Size of memory blocks

Returns

Void pointer to the allocated memory

Author

Chensong Zhang

Date

2010/08/12

Modified by Chunsheng Feng on 12/20/2013 Modified by Chunsheng Feng on 07/23/2013 Modified by Chunsheng Feng on 07/30/2013 Modified by Chensong Zhang on 07/30/2013: print error if failed

Definition at line 60 of file memory.c.

10.50.2.2 **SHORT** fasp_mem_check (void * *ptr*, const char * *message*, **INT** *ERR*)

Check whether a point is null or not.

Parameters

<i>ptr</i>	Void pointer to be checked
<i>message</i>	Error message to print
<i>ERR</i>	Integer error code

Returns

FASP_SUCCESS or error code

Author

Chensong Zhang

Date

11/16/2009

Definition at line 197 of file memory.c.

10.50.2.3 **SHORT** fasp_mem_dcsr_check (dCSRmat * *A*)

Check whether a [dCSRmat](#) *A* has successfully allocated memory.

Parameters

<i>A</i>	Pointer to be cheked
----------	----------------------

Returns

FASP_SUCCESS if success, else ERROR message (negative value)

Author

Xiaozhe Hu

Date

11/27/09

Definition at line 248 of file memory.c.

10.50.2.4 void fasp_mem_free (void * *mem*)

Free up previous allocated memory body.

Parameters

<i>mem</i>	Pointer to the memory body need to be freed
------------	---

Returns

NULL pointer

Author

Chensong Zhang

Date

2010/12/24

Definition at line 150 of file memory.c.

10.50.2.5 SHORT fasp_mem_iludata_check (ILU_data * *iludata*)

Check wether a [ILU_data](#) has enough work space.

Parameters

<i>iludata</i>	Pointer to be cheked
----------------	----------------------

Returns

FASP_SUCCESS if success, else ERROR (negative value)

Author

Xiaozhe Hu, Chensong Zhang

Date

11/27/09

Definition at line 222 of file memory.c.

10.50.2.6 void * fasp_mem_realloc (void * *oldmem*, **LONGLONG *type*)**

Reallocate, initiate, and check memory.

Parameters

<i>oldmem</i>	Pointer to the existing mem block
<i>type</i>	Size of memory blocks

Returns

Void pointer to the reallocated memory

Author

Chensong Zhang

Date

2010/08/12

Modified by Chunsheng Feng on 07/23/2013 Modified by Chensong Zhang on 07/30/2013: print error if failed

10.51 message.c File Reference

Output some useful messages.

```
#include <math.h>
#include "fasp.h"
#include "fasp_funcs.h"
```

Functions

- void [print_itinfo](#) (const [INT](#) ptrlvl, const [INT](#) stop_type, const [INT](#) iter, const [REAL](#) relres, const [REAL](#) absres, const [REAL](#) factor)
Print out iteration information for iterative solvers.
- void [print_amgcomplexity](#) ([AMG_data](#) *mgl, const [SHORT](#) ptrlvl)
Print complexities of AMG method.
- void [print_amgcomplexity_bsr](#) ([AMG_data_bsr](#) *mgl, const [SHORT](#) ptrlvl)
Print complexities of AMG method for BSR matrices.
- void [print_cputime](#) (const char *message, const [REAL](#) cputime)
Print CPU walltime.
- void [print_message](#) (const [INT](#) ptrlvl, const char *message)
Print output information if necessary.
- void [fasp_chkerr](#) (const [SHORT](#) status, const char *fctname)
Check error status and print out error messages before quit.

10.51.1 Detailed Description

Output some useful messages.

Note

These routines are meant for internal use only.

10.51.2 Function Documentation

10.51.2.1 void fasp_chkerr (const [SHORT](#) status, const char * fctname)

Check error status and print out error messages before quit.

Parameters

<i>status</i>	Error status
<i>fctname</i>	Function name where this routine is called

Author

Chensong Zhang

Date

01/10/2012

Definition at line 199 of file message.c.

10.51.2.2 void void print_amgcomplexity (**AMG_data** * *mgl*, const **SHORT** *prtlvl*)

Print complexities of AMG method.

Parameters

<i>mgl</i>	Multilevel hierachy for AMG
<i>prtlvl</i>	How much information to print

Author

Chensong Zhang

Date

11/16/2009

Definition at line 79 of file message.c.

10.51.2.3 void void print_amgcomplexity_bsr (**AMG_data_bsr** * *mgl*, const **SHORT** *prtlvl*)

Print complexities of AMG method for BSR matrices.

Parameters

<i>mgl</i>	Multilevel hierachy for AMG
<i>prtlvl</i>	How much information to print

Author

Chensong Zhang

Date

05/10/2013

Definition at line 122 of file message.c.

10.51.2.4 void void print_cputime (const char * *message*, const **REAL** *cputime*)

Print CPU walltime.

Parameters

<i>message</i>	Some string to print out
<i>cputime</i>	Walltime since start to end

Author

Chensong Zhang

Date

04/10/2012

Definition at line 165 of file message.c.

10.51.2.5 void print_itinfo (const INT *ptrlvl*, const INT *stop_type*, const INT *iter*, const REAL *relres*, const REAL *absres*, const REAL *factor*)

Print out iteration information for iterative solvers.

Parameters

<i>ptrlvl</i>	Level for output
<i>stop_type</i>	Type of stopping criteria
<i>iter</i>	Number of iterations
<i>relres</i>	Relative residual of different kinds
<i>absres</i>	Absolute residual of different kinds
<i>factor</i>	Contraction factor

Author

10.54 ordering.c File Reference

Subroutines for ordering, merging, removing duplicated integers.

```
#include "fasp.h"
```

Functions

- [INT fasp_BinarySearch](#) (INT *list, const INT value, const INT nlist)
Binary Search.
- [INT fasp_aux_unique](#) (INT numbers[], const INT size)
Remove duplicates in an sorted (ascending order) array.
- void [fasp_aux_merge](#) (INT numbers[], INT work[], INT left, INT mid, INT right)
Merge two sorted arrays.
- void [fasp_aux_msort](#) (INT numbers[], INT work[], INT left, INT right)
Sort the INT array in ascending order with the merge sort algorithm.
- void [fasp_aux_iQuickSort](#) (INT *a, INT left, INT right)
Sort the array (INT type) in ascending order with the quick sorting algorithm.
- void [fasp_aux_dQuickSort](#) (REAL *a, INT left, INT right)
Sort the array (REAL type) in ascending order with the quick sorting algorithm.
- void [fasp_aux_iQuickSortIndex](#) (INT *a, INT left, INT right, INT *index)
Reorder the index of (INT type) so that 'a' is in ascending order.
- void [fasp_aux_dQuickSortIndex](#) (REAL *a, INT left, INT right, INT *index)
Reorder the index of (REAL type) so that 'a' is ascending in such order.
- void [fasp_dcsr_CMK_order](#) (const dCSRmat *A, INT *order, INT *oindex)
Ordering vertices of matrix graph corresponding to A.
- void [fasp_dcsr_RCMK_order](#) (const dCSRmat *A, INT *order, INT *oindex, INT *rorder)
Reverse CMK ordering.

10.54.1 Detailed Description

Subroutines for ordering, merging, removing duplicated integers.

10.54.2 Function Documentation

10.54.2.1 void fasp_aux_dQuickSort (REAL * *a*, INT *left*, INT *right*)

Sort the array (REAL type) in ascending order with the quick sorting algorithm.

Parameters

<i>a</i>	Pointer to the array needed to be sorted
<i>left</i>	Starting index
<i>right</i>	Ending index

Author

Zhiyang Zhou

Date

2009/11/28

Note

'left' and 'right' are usually set to be 0 and n-1, respectively where n is the length of 'a'.

Definition at line 239 of file ordering.c.

10.54.2.2 void fasp_aux_dQuickSortIndex (REAL * *a*, INT *left*, INT *right*, INT * *index*)

Reorder the index of (REAL type) so that 'a' is ascending in such order.

Parameters

<i>a</i>	Pointer to the array
<i>left</i>	Starting index
<i>right</i>	Ending index
<i>index</i>	Index of 'a' (out)

Author

Zhiyang Zhou

Date

2009/12/02

Note

'left' and 'right' are usually set to be 0 and n-1, respectively, where n is the length of 'a'. 'index' should be initialized in the nature order and it has the same length as 'a'.

Definition at line 320 of file ordering.c.

10.54.2.3 void fasp_aux_iQuickSort (INT * *a*, INT *left*, INT *right*)

Sort the array (INT type) in ascending order with the quick sorting algorithm.

Parameters

<i>a</i>	Pointer to the array needed to be sorted
<i>left</i>	Starting index
<i>right</i>	Ending index

Author

Zhiyang Zhou

Date

11/28/2009

Note

'left' and 'right' are usually set to be 0 and n-1, respectively where n is the length of 'a'.

Definition at line 201 of file ordering.c.

10.54.2.4 void fasp_aux_iQuickSortIndex (INT * *a*, INT *left*, INT *right*, INT * *index*)

Reorder the index of (INT type) so that 'a' is in ascending order.

Parameters

<i>a</i>	Pointer to the array
<i>left</i>	Starting index
<i>right</i>	Ending index
<i>index</i>	Index of 'a' (out)

Author

Zhiyang Zhou

Date

2009/12/02

Note

'left' and 'right' are usually set to be 0 and n-1, respectively, where n is the length of 'a'. 'index' should be initialized in the nature order and it has the same length as 'a'.

Definition at line 279 of file ordering.c.

10.54.2.5 void fasp_aux_merge (INT *numbers*[], INT *work*[], INT *left*, INT *mid*, INT *right*)

Merge two sorted arrays.

Parameters

<i>numbers</i>	Pointer to the array needed to be sorted
<i>work</i>	Pointer to the work array with same size as numbers
<i>left</i>	Starting index of array 1
<i>mid</i>	Starting index of array 2
<i>right</i>	Ending index of array 1 and 2

Author

Chensong Zhang

Date

11/21/2010

Note

Both arrays are stored in numbers! Arrays should be pre-sorted!

Definition at line 108 of file ordering.c.

10.54.2.6 `void fasp_aux_msort (INT numbers[], INT work[], INT left, INT right)`

Sort the INT array in ascending order with the merge sort algorithm.

Parameters

<i>numbers</i>	Pointer to the array needed to be sorted
<i>work</i>	Pointer to the work array with same size as numbers
<i>left</i>	Starting index
<i>right</i>	Ending index

Author

Chensong Zhang

Date

11/21/2010

Note

'left' and 'right' are usually set to be 0 and n-1, respectively

Definition at line 170 of file ordering.c.

10.54.2.7 `INT fasp_aux_unique (INT numbers[], const INT size)`

Remove duplicates in an sorted (ascending order) array.

Parameters

<i>numbers</i>	Pointer to the array needed to be sorted (in/out)
<i>size</i>	Length of the target array

Returns

New size after removing duplicates

Author

Chensong Zhang

Date

11/21/2010

Note

Operation is in place. Does not use any extra or temporary storage.

Definition at line 75 of file ordering.c.

10.54.2.8 INT fasp_BinarySearch (INT * *list*, const INT *value*, const INT *nlist*)

Binary Search.

Parameters

<i>list</i>	Pointer to a set of values
<i>value</i>	The target
<i>nlist</i>	Length of the array list

Returns

The location of value in array list if succeeded; otherwise, return -1.

Author

Chunsheng Feng

Date

03/01/2011

Definition at line 30 of file ordering.c.

10.54.2.9 void fasp_dcsr_CMK_order (const dCSRmat * *A*, INT * *order*, INT * *oindex*)

Ordering vertices of matrix graph corresponding to *A*.

Parameters

<i>A</i>	Pointer to matrix
<i>oindex</i>	Pointer to index of vertices in order
<i>order</i>	Pointer to vertices with increasing degree

Author

Zheng Li, Chensong Zhang

Date

05/28/2014

Definition at line 356 of file ordering.c.

10.54.2.10 void fasp_dcsr_RCMK_order (const dCSRmat * *A*, INT * *order*, INT * *oindex*, INT * *rorder*)

Reverse CMK ordering.

Parameters

<i>A</i>	Pointer to matrix
<i>order</i>	Pointer to vertices with increasing degree
<i>oindex</i>	Pointer to index of vertices in order
<i>rorder</i>	Pointer to reverse order

Author

Zheng Li, Chensong Zhang

Date

10/10/2014

Definition at line 405 of file ordering.c.

Initialize, set, or print input data and parameters.

```
#include <stdio.h>
#include "fasp.h"
#include "fasp_funcs.h"
```

Functions

- void [fasp_param_set](#) (int argc, const char *argv[], [input_param](#) *iniparam)
Read input from command-line arguments.

- void `fasp_param_init` (`input_param` *iniparam, `itsolver_param` *itsparam, `AMG_param` *amgparam, `ILU_param` *iluparam, `Schwarz_param` *schparam)
Initialize parameters, global variables, etc.
- void `fasp_param_input_init` (`input_param` *iniparam)
Initialize input parameters.
- void `fasp_param_amg_init` (`AMG_param` *amgparam)
Initialize AMG parameters.
- void `fasp_param_solver_init` (`itsolver_param` *itsparam)
Initialize `itsolver_param`.
- void `fasp_param_ilu_init` (`ILU_param` *iluparam)
Initialize ILU parameters.
- void `fasp_param_Schwarz_init` (`Schwarz_param` *schparam)
Initialize Schwarz parameters.
- void `fasp_param_amg_set` (`AMG_param` *param, `input_param` *iniparam)
Set `AMG_param` from INPUT.
- void `fasp_param_ilu_set` (`ILU_param` *iluparam, `input_param` *iniparam)
Set `ILU_param` with INPUT.
- void `fasp_param_Schwarz_set` (`Schwarz_param` *schparam, `input_param` *iniparam)
Set `Schwarz_param` with INPUT.
- void `fasp_param_solver_set` (`itsolver_param` *itsparam, `input_param` *iniparam)
Set `itsolver_param` with INPUT.
- void `fasp_param_amg_to_prec` (`precond_data` *pcdata, `AMG_param` *amgparam)
Set `precond_data` with `AMG_param`.
- void `fasp_param_prec_to_amg` (`AMG_param` *amgparam, `precond_data` *pcdata)
Set `AMG_param` with `precond_data`.
- void `fasp_param_amg_to_prec_bsr` (`precond_data_bsr` *pcdata, `AMG_param` *amgparam)
Set `precond_data_bsr` with `AMG_param`.
- void `fasp_param_prec_to_amg_bsr` (`AMG_param` *amgparam, `precond_data_bsr` *pcdata)
Set `AMG_param` with `precond_data`.
- void `fasp_param_amg_print` (`AMG_param` *param)
Print out AMG parameters.
- void `fasp_param_ilu_print` (`ILU_param` *param)
Print out ILU parameters.
- void `fasp_param_Schwarz_print` (`Schwarz_param` *param)
Print out Schwarz parameters.
- void `fasp_param_solver_print` (`itsolver_param` *param)
Print out itsolver parameters.

10.55.1 Detailed Description

Initialize, set, or print input data and parameters.

10.55.2 Function Documentation

10.55.2.1 void `fasp_param_amg_init` (`AMG_param` * *amgparam*)

Initialize AMG parameters.

Parameters

10.56.1 Detailed Description

Krylov subspace methods – Preconditioned BiCGstab.

Abstract algorithm

PBICGStab method to solve $A*x=b$ is to generate $\{x_k\}$ to approximate x Note: We generate a series of $\{p_k\}$ such that $V_k=\text{span}\{p_1, \dots, p_k\}$.Step 0. Given A, b, x_0, M Step 1. Compute residual $r_0 = b - A*x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1} * r_0$, $p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:MaxIt$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha * p_k$;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha * (A * p_k)$;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k -th iteration; END FOR

Convergence check: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check:

- IF $\text{norm}(\alpha * p_k) / \text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check:

- IF $\text{norm}(r_{k+1}) / \text{norm}(b) < \text{tol}$
 1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

Preconditioned BiCGstab method for solving $Au=b$.

10.57.1 Detailed Description

Krylov subspace methods – Preconditioned BiCGstab (matrix free)

Abstract algorithm of Krylov method

Krylov method to solve $A*x=b$ is to generate $\{x_k\}$ to approximate x , where x_k is the optimal solution in Krylov space

$V_k = \text{span}\{r_0, A*r_0, A^2*r_0, \dots, A^{k-1}*r_0\}$,

under some inner product.

For the implementation, we generate a series of $\{p_k\}$ such that $V_k = \text{span}\{p_1, \dots, p_k\}$. Details:

Step 0. Given A, b, x_0, M

Step 1. Compute residual $r_0 = b - A * x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1} * r_0, p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0 : \text{MaxIt}$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha * p_k$;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha * (A * p_k)$;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k -th iteration; END FOR

Convergence check is: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check is like following:

- IF $\text{norm}(\alpha * p_k) / \text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check is like following:

- IF $\text{norm}(r_{k+1}) / \text{norm}(b) < \text{tol}$
 1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

10.59.1 Detailed Description

Krylov subspace methods – Preconditioned conjugate gradient (matrix free)

Abstract algorithm

PCG method to solve $Ax=b$ is to generate $\{x_k\}$ to approximate x

Step 0. Given A, b, x_0, M

Step 1. Compute residual $r_0 = b - Ax_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1}r_0, p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:MaxIt$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha p_k$;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha(Ap_k)$;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k -th iteration; END FOR

Convergence check is: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check is like following:

- IF $\text{norm}(\alpha p_k)/\text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - Ax_{k+1}$;
 2. convergence check;

- 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check is like following:

- IF norm(r_{k+1})/norm(b) < tol
 - 1. compute the real residual $r = b - A * x_{k+1}$;
 - 2. convergence check;
 - 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

Note

A preconditioned minimal residual (Minres) method for solving $Au=b$.

10.65.1 Detailed Description

Krylov subspace methods – Preconditioned minimal residual.

Abstract algorithm of Krylov method

Krylov method to solve $Ax=b$ is to generate $\{x_k\}$ to approximate x , where x_k is the optimal solution in Krylov space

$V_k = \text{span}\{r_0, A*r_0, A^2*r_0, \dots, A^{k-1}*r_0\}$,

under some inner product.

For the implementation, we generate a series of $\{p_k\}$ such that $V_k = \text{span}\{p_1, \dots, p_k\}$. Details:

Step 0. Given A , b , x_0 , M

Step 1. Compute residual $r_0 = b - A*x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1}*r_0$, $p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:\text{MaxIt}$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha*p_k$;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha*(A*p_k)$;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k -th iteration; END FOR

Convergence check: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check:

- IF $\text{norm}(\alpha*p_k)/\text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A*x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check:

- IF $\text{norm}(r_{k+1})/\text{norm}(b) < \text{tol}$
 1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

Note

10.66.1 Detailed Description

Krylov subspace methods – Preconditioned minimal residual (matrix free)

Abstract algorithm of Krylov method

Krylov method to solve $A*x=b$ is to generate $\{x_k\}$ to approximate x , where x_k is the optimal solution in Krylov space

$V_k = \text{span}\{r_0, A*r_0, A^2*r_0, \dots, A^{k-1}*r_0\}$,

under some inner product.

For the implementation, we generate a series of $\{p_k\}$ such that $V_k = \text{span}\{p_1, \dots, p_k\}$. Details:

Step 0. Given A , b , x_0 , M

Step 1. Compute residual $r_0 = b - A*x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1}*r_0$, $p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:\text{MaxIt}$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha*p_k$;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha*(A*p_k)$;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;

- print the result of k-th iteration; END FOR

Convergence check is: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check is like following:

- IF $\text{norm}(\alpha * p_k)/\text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check is like following:

- IF $\text{norm}(r_{k+1})/\text{norm}(b) < \text{tol}$
 1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

#include "fasp_block.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_precond_block_diag_3](#) (REAL *r, REAL *z, void *data)
block diagonal preconditioning (3x3 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_diag_3_amg](#) (REAL *r, REAL *z, void *data)
block diagonal preconditioning (3x3 block matrix, each diagonal block is solved by AMG)
- void [fasp_precond_block_diag_4](#) (REAL *r, REAL *z, void *data)
block diagonal preconditioning (4x4 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_lower_3](#) (REAL *r, REAL *z, void *data)
block lower triangular preconditioning (3x3 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_lower_3_amg](#) (REAL *r, REAL *z, void *data)
block lower triangular preconditioning (3x3 block matrix, each diagonal block is solved by AMG)
- void [fasp_precond_block_lower_4](#) (REAL *r, REAL *z, void *data)
block lower triangular preconditioning (4x4 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_upper_3](#) (REAL *r, REAL *z, void *data)
block upper triangular preconditioning (3x3 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_upper_3_amg](#) (REAL *r, REAL *z, void *data)
block upper triangular preconditioning (3x3 block matrix, each diagonal block is solved AMG)
- void [fasp_precond_block_SGS_3](#) (REAL *r, REAL *z, void *data)
block symmetric GS preconditioning (3x3 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_block_SGS_3_amg](#) (REAL *r, REAL *z, void *data)
block symmetric GS preconditioning (3x3 block matrix, each diagonal block is solved exactly)
- void [fasp_precond_sweeping](#) (REAL *r, REAL *z, void *data)
sweeping preconditioner for Maxwell equations

10.67.1 Detailed Description

Preconditioners for [block_dCSRmat](#) matrices.

10.67.2 Function Documentation

10.67.2.1 void fasp_precond_block_diag_3 (REAL * *r*, REAL * *z*, void * *data*)

block diagonal preconditioning (3x3 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 26 of file precondition_bcsr.c.

10.67.2.2 void fasp_precond_block_diag_3_amg (REAL * *r*, REAL * *z*, void * *data*)

block diagonal preconditioning (3x3 block matrix, each diagonal block is solved by AMG)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 101 of file precondition_bcsr.c.

10.67.2.3 void fasp_precond_block_diag_4 (REAL * *r*, REAL * *z*, void * *data*)

block diagonal preconditioning (4x4 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 166 of file precondition_bcsr.c.

10.67.2.4 void fasp_precond_block_lower_3 (REAL * *r*, REAL * *z*, void * *data*)

block lower triangular preconditioning (3x3 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 252 of file precondition_bcsr.c.

10.67.2.5 void fasp_precond_block_lower_3_amg (REAL * *r*, REAL * *z*, void * *data*)

block lower triangular preconditioning (3x3 block matrix, each diagonal block is solved by AMG)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 334 of file precondition_bcsr.c.

10.67.2.6 void fasp_precond_block_lower_4 (REAL * *r*, REAL * *z*, void * *data*)

block lower triangular preconditioning (4x4 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

07/10/2014

Definition at line 408 of file precondition_bcsr.c.

10.67.2.7 void fasp_precond_block_SGS_3 (REAL * *r*, REAL * *z*, void * *data*)

block symmetric GS preconditioning (3x3 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

02/19/2015

Definition at line 669 of file precondition_bcsr.c.

10.67.2.8 void fasp_precond_block_SGS_3_amg (REAL * *r*, REAL * *z*, void * *data*)

block symmetric GS preconditioning (3x3 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

02/19/2015

Definition at line 788 of file precondition_bcsr.c.

10.67.2.9 void fasp_precond_block_upper_3 (REAL * *r*, REAL * *z*, void * *data*)

block upper triangular preconditioning (3x3 block matrix, each diagonal block is solved exactly)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

02/18/2015

Definition at line 506 of file precondition_bcsr.c.

10.67.2.10 void fasp_precond_block_upper_3_amg (REAL * *r*, REAL * *z*, void * *data*)

block upper triangular preconditioning (3x3 block matrix, each diagonal block is solved AMG)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

02/19/2015

Definition at line 588 of file precondition_bcsr.c.

10.67.2.11 void fasp_precond_sweeping (REAL * *r*, REAL * *z*, void * *data*)

sweeping preconditioner for Maxwell equations

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

05/01/2014

Definition at line 898 of file precondition_bcsr.c.

10.68 precondition_bsr.c File Reference

Preconditioners for dBSRmat matrices.

```
#include "fasp.h"
#include "fasp_functs.h"
#include "mg_util.inl"
```

Functions

- void [fasp_precond_dbsr_diag](#) (REAL **r*, REAL **z*, void **data*)
*Diagonal preconditioner $z = \text{inv}(D) * r$.*
- void [fasp_precond_dbsr_diag_nc2](#) (REAL **r*, REAL **z*, void **data*)
*Diagonal preconditioner $z = \text{inv}(D) * r$.*

- void `fasp_precond_dbsr_diag_nc3` (`REAL *r`, `REAL *z`, void `*data`)
*Diagonal preconditioner $z=inv(D)*r$.*
- void `fasp_precond_dbsr_diag_nc5` (`REAL *r`, `REAL *z`, void `*data`)
*Diagonal preconditioner $z=inv(D)*r$.*
- void `fasp_precond_dbsr_diag_nc7` (`REAL *r`, `REAL *z`, void `*data`)
*Diagonal preconditioner $z=inv(D)*r$.*
- void `fasp_precond_dbsr_ilu` (`REAL *r`, `REAL *z`, void `*data`)
ILU preconditioner.
- void `fasp_precond_dbsr_amg` (`REAL *r`, `REAL *z`, void `*data`)
AMG preconditioner.
- void `fasp_precond_dbsr_nl_amli` (`REAL *r`, `REAL *z`, void `*data`)
Nonlinear AMLI-cycle AMG preconditioner.
- void `fasp_precond_dbsr_amg_nk` (`REAL *r`, `REAL *z`, void `*data`)
AMG with extra near kernel solve preconditioner.

10.68.1 Detailed Description

Preconditioners for `dBSRmat` matrices.

10.68.2 Function Documentation

10.68.2.1 void `fasp_precond_dbsr_amg` (`REAL *r`, `REAL *z`, void `*data`)

AMG preconditioner.

Parameters

<code>r</code>	Pointer to the vector needs preconditioning
<code>z</code>	Pointer to preconditioned vector
<code>data</code>	Pointer to precondition data

Author

Xiaozhe Hu

Date

08/07/2011

Definition at line 563 of file `precond_bsr.c`.

10.68.2.2 void `fasp_precond_dbsr_amg_nk` (`REAL *r`, `REAL *z`, void `*data`)

AMG with extra near kernel solve preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

05/26/2014

Definition at line 643 of file precondition_bsr.c.

10.68.2.3 void fasp_precond_dbsr_diag (REAL * *r*, REAL * *z*, void * *data*)Diagonal preconditioner $z = \text{inv}(D) * r$.**Parameters**

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Preconditioners for [dCSRmat](#) matrices.

```
#include "fasp.h"
#include "fasp_functs.h"
#include "mg_util.inl"
```

Functions

- `precond * fasp_precond_setup` (const `SHORT` `precond_type`, `AMG_param` *`amgparam`, `ILU_param` *`iluparam`, `dCSRmat` *`A`)
#include "forts_ns.h"
- void `fasp_precond_diag` (`REAL` *`r`, `REAL` *`z`, void *`data`)
*Diagonal preconditioner $z = \text{inv}(D) * r$.*
- void `fasp_precond_ilu` (`REAL` *`r`, `REAL` *`z`, void *`data`)
ILU preconditioner.
- void `fasp_precond_ilu_forward` (`REAL` *`r`, `REAL` *`z`, void *`data`)
ILU preconditioner: only forward sweep.
- void `fasp_precond_ilu_backward` (`REAL` *`r`, `REAL` *`z`, void *`data`)
ILU preconditioner: only backward sweep.
- void `fasp_precond_Schwarz` (`REAL` *`r`, `REAL` *`z`, void *`data`)
get z from r by Schwarz
- void `fasp_precond_amg` (`REAL` *`r`, `REAL` *`z`, void *`data`)
AMG preconditioner.
- void `fasp_precond_famg` (`REAL` *`r`, `REAL` *`z`, void *`data`)
Full AMG preconditioner.
- void `fasp_precond_amli` (`REAL` *`r`, `REAL` *`z`, void *`data`)
AMLI AMG preconditioner.
- void `fasp_precond_nl_amli` (`REAL` *`r`, `REAL` *`z`, void *`data`)
Nonlinear AMLI AMG preconditioner.
- void `fasp_precond_amg_nk` (`REAL` *`r`, `REAL` *`z`, void *`data`)
AMG with extra near kernel solve as preconditioner.
- void `fasp_precond_free` (const `SHORT` `precond_type`, `precond` *`pc`)
free preconditioner

10.69.1 Detailed Description

Preconditioners for `dCSRmat` matrices.

10.69.2 Function Documentation

10.69.2.1 void fasp_precond_amg (`REAL` * `r`, `REAL` * `z`, void * `data`)

AMG preconditioner.

Parameters

<code>r</code>	Pointer to the vector needs preconditioning
<code>z</code>	Pointer to preconditioned vector
<code>data</code>	Pointer to precondition data

Author

Chensong Zhang

Date

04/06/2010

Definition at line 400 of file precondition_csr.c.

10.69.2.2 void fasp_precond_amg_nk (REAL * r, REAL * z, void * data)

AMG with extra near kernel solve as preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

05/26/2014

Definition at line 535 of file precondition_csr.c.

10.69.2.3 void fasp_precond_amli (REAL * r, REAL * z, void * data)

AMLI AMG preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

01/23/2011

Definition at line 469 of file precondition_csr.c.

10.69.2.4 void fasp_precond_diag (REAL * r, REAL * z, void * data)

Diagonal preconditioner $z = \text{inv}(D) * r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Chensong Zhang

Date

04/06/2010

Definition at line 159 of file precondition_csr.c.

10.69.2.5 void fasp_precond_famg (REAL * *r*, REAL * *z*, void * *data*)

Full AMG preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

02/27/2011

Definition at line 436 of file precondition_csr.c.

10.69.2.6 void fasp_precond_free (const SHORT *precond_type*, precondition * *pc*)

free preconditioner

Parameters

<i>precond_type</i>	Preconditioner type
* <i>pc</i>	precondition data & fct

Returns

void

Author

Feiteng Huang

Date

12/24/2012

Definition at line 619 of file precondition_csr.c.

10.69.2.7 void fasp_precond_ilu (REAL * *r*, REAL * *z*, void * *data*)

ILU preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/06/2010

Definition at line 185 of file precondition_csr.c.

10.69.2.8 void fasp_precond_ilu_backward (REAL * *r*, REAL * *z*, void * *data*)

ILU preconditioner: only backward sweep.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu, Shiquan Zhang

Date

04/06/2010

Definition at line 302 of file precondition_csr.c.

10.69.2.9 void fasp_precond_ilu_forward (REAL * *r*, REAL * *z*, void * *data*)

ILU preconditioner: only forward sweep.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu, Shiquan Zhang

Date

04/06/2010

Definition at line 249 of file precondition_csr.c.

10.69.2.10 void fasp_precond_nl_amli (REAL * *r*, REAL * *z*, void * *data*)

Nonlinear AMLI AMG preconditioner.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Xiaozhe Hu

Date

04/25/2011

Definition at line 502 of file precondition_csr.c.

10.69.2.11 void fasp_precond_Schwarz (REAL * *r*, REAL * *z*, void * *data*)get *z* from *r* by Schwarz

Parameters

* <i>r</i>	pointer to residual
* <i>z</i>	pointer to preconditioned residual
* <i>data</i>	pointer to precondition data

Author

Xiaozhe Hu

Date

03/22/2010

Note

Change Schwarz interface by Zheng Li on 11/18/2014

Definition at line 355 of file precondition_csr.c.

10.69.2.12 precondition * fasp_precond_setup (const SHORT *precond_type*, AMG_param * *amgparam*, ILU_param * *iluparam*, dCSRmat * *A*)

#include "forts_ns.h"

Setup preconditioner interface for iterative methods

Parameters

<i>precond_type</i>	Preconditioner type
<i>amgparam</i>	Pointer to AMG parameters
<i>iluparam</i>	Pointer to ILU parameters
<i>A</i>	Pointer to the coefficient matrix

Returns

Pointer to preconditioner

Author

Preconditioners for `dSTRmat` matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void `fasp_precond_dstr_diag` (`REAL *r`, `REAL *z`, void *data)
*Diagonal preconditioner $z = \text{inv}(D) * r$.*
- void `fasp_precond_dstr_ilu0` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(0) decomposition.
- void `fasp_precond_dstr_ilu1` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(1) decomposition.
- void `fasp_precond_dstr_ilu0_forward` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(0) decomposition: $Lz = r$.
- void `fasp_precond_dstr_ilu0_backward` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(0) decomposition: $Uz = r$.
- void `fasp_precond_dstr_ilu1_forward` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(1) decomposition: $Lz = r$.
- void `fasp_precond_dstr_ilu1_backward` (`REAL *r`, `REAL *z`, void *data)
Preconditioning using STR_ILU(1) decomposition: $Uz = r$.
- void `fasp_precond_dstr_blockgs` (`REAL *r`, `REAL *z`, void *data)
CPR-type preconditioner (STR format)

10.70.1 Detailed Description

Preconditioners for [dSTRmat](#) matrices.

10.70.2 Function Documentation

10.70.2.1 void fasp_precond_dstr_blockgs (REAL * *r*, REAL * *z*, void * *data*)

CPR-type preconditioner (STR format)

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

10/17/2010

Definition at line 1706 of file precondition_str.c.

10.70.2.2 void fasp_precond_dstr_diag (REAL * *r*, REAL * *z*, void * *data*)

Diagonal preconditioner $z = \text{inv}(D) * r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/06/2010

Definition at line 27 of file precondition_str.c.

10.70.2.3 void fasp_precond_dstr_ilu0 (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(0) decomposition.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/21/2010

Definition at line 54 of file precondition_str.c.

10.70.2.4 void fasp_precond_dstr_ilu0_backward (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(0) decomposition: $Uz = r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

06/07/2010

Definition at line 978 of file precondition_str.c.

10.70.2.5 void fasp_precond_dstr_ilu0_forward (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(0) decomposition: $Lz = r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

06/07/2010

Definition at line 815 of file precondition_str.c.

10.70.2.6 void fasp_precond_dstr_ilu1 (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(1) decomposition.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/21/2010

Definition at line 336 of file precondition_str.c.

10.70.2.7 void fasp_precond_dstr_ilu1_backward (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(1) decomposition: $Uz = r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/21/2010

Definition at line 1425 of file precondition_str.c.

10.70.2.8 void fasp_precond_dstr_ilu1_forward (REAL * *r*, REAL * *z*, void * *data*)

Preconditioning using STR_ILU(1) decomposition: $Lz = r$.

Parameters

<i>r</i>	Pointer to the vector needs preconditioning
<i>z</i>	Pointer to preconditioned vector
<i>data</i>	Pointer to precondition data

Author

Shiquan Zhang

Date

04/21/2010

10.71.2 Function Documentation

10.71.2.1 INT fasp_solver_bdcsr_pvfgmres (block_dCSRmat * A, dvector * b, dvector * x, precondition * pc, const REAL tol, const INT MaxIt, const SHORT restart, const SHORT stop_type, const SHORT prtIvl)

Solve "Ax=b" using PFGMRES (right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration and flexible preconditioner can be used.

Parameters

*A	pointer to the coefficient matrix
*b	pointer to the right hand side vector

<i>*x</i>	pointer to the solution vector
<i>MaxIt</i>	maximal iteration number allowed
<i>tol</i>	tolerance
<i>*pc</i>	pointer to preconditioner data
<i>prtlvl</i>	How much information to print out
<i>stop_type</i>	default stopping criterion, i.e. $\ r_k\ /\ r_0\ < tol$, is used.
<i>restart</i>	number of restart for GMRES

Returns

Iteration number if converges; ERROR otherwise.

10.78.3.5 void fasp_blas_smat_inv_nc4 (REAL * *a*)

Compute the inverse matrix of a 4*4 full matrix A (in place)

Parameters

<i>a</i>	Pointer to the REAL array which stands a 4*4 matrix
----------	---

Author

Xiaozhe Hu

Date

01/12/2013

Modified by Hongxuan Zhang on 06/13/2014: Fix a bug in M23.

Definition at line 115 of file smat.c.

10.78.3.6 void fasp_blas_smat_inv_nc5 (REAL * *a*)

Compute the inverse matrix of a 5*5 full matrix A (in place)

Parameters

<i>a</i>	Pointer to the REAL array which stands a 5*5 matrix
----------	---

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Definition at line 173 of file smat.c.

10.78.3.7 void fasp_blas_smat_inv_nc7 (REAL * *a*)

Compute the inverse matrix of a 7*7 matrix *a*.

Parameters

<i>a</i>	Pointer to the REAL array which stands a 7*7 matrix
----------	---

Note

This is NOT implemented yet!

Author

Xiaozhe Hu, Shiquan Zhang

Date

05/01/2010

Definition at line 389 of file smat.c.

10.78.3.8 void fasp_blas_smat_inv_nc (REAL * *a*, const INT *n*)

Compute the inverse of a matrix using Gauss Elimination with Pivoting.

Parameters

<i>a</i>	Pointer to the REAL array which stands a n*n matrix
<i>n</i>	Dimension of the matrix

Author

Chensong Zhang

Date

04/03/2015

Note

This routine is based on gaussj() from "Numerical Recipies in C"!

Definition at line 472 of file smat.c.

10.78.3.9 REAL fasp_blas_smat_Linfinity (REAL * A, const INT n)

Compute the L infinity norm of A.

Parameters

<i>A</i>	Pointer to the n*n dense matrix
<i>n</i>	the dimension of the dense matrix

Author

Xiaozhe Hu

Date

05/26/2014

Definition at line 595 of file smat.c.

10.78.3.10 void fasp_iden_free (idenmat * A)

Free idenmat sparse matrix data memeory space.

Parameters

<i>A</i>	Pointer to the idenmat matrix
----------	-------------------------------

Author

Chensong Zhang

Date

2010/04/03

Definition at line 628 of file smat.c.

10.78.3.11 void fasp_smat_identity (REAL * a, const INT n, const INT n2)

Set a n*n full matrix to be a identity.

Parameters

<i>a</i>	Pointer to the REAL vector which stands for a n*n full matrix
<i>n</i>	Size of full matrix
<i>n2</i>	Length of the REAL vector which stores the n*n full matrix

Author

Xiaozhe Hu

Date

Definition at line 728 of file smat.c.

10.78.3.12 void fasp_smat_identity_nc2 (REAL * a)

Set a 2*2 full matrix to be a identity.

Parameters

<i>a</i>	Pointer to the REAL vector which stands for a 2*2 full matrix
----------	---

Author

Xiaozhe Hu

Date

2011/11/18

Definition at line 648 of file smat.c.

10.78.3.13 void fasp_smat_identity_nc3 (REAL * *a*)

Set a 3*3 full matrix to be a identity.

Parameters

<i>a</i>	Pointer to the REAL vector which stands for a 3*3 full matrix
----------	---

Author

Xiaozhe Hu

Date

2010/12/25

Definition at line 665 of file smat.c.

10.78.3.14 void fasp_smat_identity_nc5 (REAL * *a*)

Set a 5*5 full matrix to be a identity.

Parameters

<i>a</i>	Pointer to the REAL vector which stands for a 5*5 full matrix
----------	---

Author

Xiaozhe Hu

Date

2010/12/25

Definition at line 682 of file smat.c.

10.78.3.15 void fasp_smat_identity_nc7 (REAL * *a*)

Set a 7*7 full matrix to be a identity.

Parameters

<i>a</i>	Pointer to the REAL vector which stands for a 7*7 full matrix
----------	---

10.79 smoother_bsr.c File Reference

Smoothers for [dBSRmat](#) matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_smoother_dbsr_jacobi](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u)

Jacobi relaxation.
- void [fasp_smoother_dbsr_jacobi_setup](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [REAL](#) *diaginv)

Setup for jacobi relaxation, fetch the diagonal sub-block matrixes and make them inverse first.
- void [fasp_smoother_dbsr_jacobi1](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [REAL](#) *diaginv)

Jacobi relaxation.
- void [fasp_smoother_dbsr_gs](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [INT](#) order, [INT](#) *mark)

Gauss-Seidel relaxation.
- void [fasp_smoother_dbsr_gs1](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [INT](#) order, [INT](#) *mark, [REAL](#) *diaginv)

Gauss-Seidel relaxation.
- void [fasp_smoother_dbsr_gs_ascend](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [REAL](#) *diaginv)

Gauss-Seidel relaxation in the ascending order.
- void [fasp_smoother_dbsr_gs_ascend1](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u)

Gauss-Seidel relaxation in the ascending order.
- void [fasp_smoother_dbsr_gs_descend](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [REAL](#) *diaginv)

Gauss-Seidel relaxation in the descending order.
- void [fasp_smoother_dbsr_gs_descend1](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u)

Gauss-Seidel relaxation in the descending order.
- void [fasp_smoother_dbsr_gs_order1](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [REAL](#) *diaginv, [INT](#) *mark)

Gauss-Seidel relaxation in the user-defined order.
- void [fasp_smoother_dbsr_gs_order2](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [INT](#) *mark, [REAL](#) *work)

Gauss-Seidel relaxation in the user-defined order.
- void [fasp_smoother_dbsr_sor](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *u, [INT](#) order, [INT](#) *mark, [REAL](#) weight)

SOR relaxation.

- void `fasp_smoother_dbsr_sor1` (`dBSRmat *A`, `dvector *b`, `dvector *u`, `INT order`, `INT *mark`, `REAL *diaginv`, `REAL weight`)
SOR relaxation.
- void `fasp_smoother_dbsr_sor_ascend` (`dBSRmat *A`, `dvector *b`, `dvector *u`, `REAL *diaginv`, `REAL weight`)
SOR relaxation in the ascending order.
- void `fasp_smoother_dbsr_sor_descend` (`dBSRmat *A`, `dvector *b`, `dvector *u`, `REAL *diaginv`, `REAL weight`)
SOR relaxation in the descending order.
- void `fasp_smoother_dbsr_sor_order` (`dBSRmat *A`, `dvector *b`, `dvector *u`, `REAL *diaginv`, `INT *mark`, `REAL weight`)
SOR relaxation in the user-defined order.
- void `fasp_smoother_dbsr_ilu` (`dBSRmat *A`, `dvector *b`, `dvector *x`, void `*data`)
ILU method as the smoother in solving $Au=b$ with multigrid method.

10.79.1 Detailed Description

Smoothers for `dBSRmat` matrices.

10.79.2 Function Documentation

10.79.2.1 void `fasp_smoother_dbsr_gs` (`dBSRmat * A`, `dvector * b`, `dvector * u`, `INT order`, `INT * mark`)

Gauss-Seidel relaxation.

Parameters

<i>A</i>	Pointer to <code>dBSRmat</code> : the coefficient matrix
<i>b</i>	Pointer to <code>dvector</code> : the right hand side
<i>u</i>	Pointer to <code>dvector</code> : the unknowns (IN: initial, OUT: approximation)
<i>order</i>	Flag to indicate the order for smoothing If <code>mark = NULL</code> ASCEND 12: in ascending order DE↔SCEND 21: in descending order If <code>mark != NULL</code> : in the user-defined order
<i>mark</i>	Pointer to NULL or to the user-defined ordering

Author

Note

The only difference between the functions 'fasp_smoother_dbsr_gs_ascend1' and 'fasp_smoother_dbsr_gs_↵ascend' is that we don't have to multiply by the inverses of the diagonal blocks in each ROW since matrix A has been such scaled that all the diagonal blocks become identity matrices.

Definition at line 641 of file smoother_bsr.c.

10.79.2.5 void fasp_smoother_dbsr_gs_descend (dBSRmat * *A*, dvector * *b*, dvector * *u*, REAL * *diagin*v)

Gauss-Seidel relaxation in the descending order.

Parameters

<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>u</i>	Pointer to dvector: the unknowns (IN: initial guess, OUT: approximation)
<i>diagin</i> v	Inverses for all the diagonal blocks of A

Smoothers for [dCSRmat](#) matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_smoother_dcsr_jacobi](#) (dvector *u, const INT i_1, const INT i_n, const INT s, [dCSRmat](#) *A, dvector *b, INT L)
Jacobi method as a smoother.
- void [fasp_smoother_dcsr_gs](#) (dvector *u, const INT i_1, const INT i_n, const INT s, [dCSRmat](#) *A, dvector *b, INT L)
Gauss-Seidel method as a smoother.
- void [fasp_smoother_dcsr_gs_cf](#) (dvector *u, [dCSRmat](#) *A, dvector *b, INT L, INT *mark, const INT order)
Gauss-Seidel smoother with C/F ordering for Au=b.
- void [fasp_smoother_dcsr_sgs](#) (dvector *u, [dCSRmat](#) *A, dvector *b, INT L)
Symmetric Gauss-Seidel method as a smoother.
- void [fasp_smoother_dcsr_sor](#) (dvector *u, const INT i_1, const INT i_n, const INT s, [dCSRmat](#) *A, dvector *b, INT L, const REAL w)
SOR method as a smoother.
- void [fasp_smoother_dcsr_sor_cf](#) (dvector *u, [dCSRmat](#) *A, dvector *b, INT L, const REAL w, INT *mark, const INT order)
SOR smoother with C/F ordering for Au=b.
- void [fasp_smoother_dcsr_ilu](#) ([dCSRmat](#) *A, dvector *b, dvector *x, void *data)
ILU method as a smoother.

- void `fasp_smoother_dcsr_kaczmarz` (`dvector` *u, const `INT` i_1, const `INT` i_n, const `INT` s, `dCSRmat` *A, `dvector` *b, `INT` L, const `REAL` w)
Kaczmarz method as a smoother.
- void `fasp_smoother_dcsr_L1diag` (`dvector` *u, const `INT` i_1, const `INT` i_n, const `INT` s, `dCSRmat` *A, `dvector` *b, `INT` L)
Diagonal scaling (using L1 norm) as a smoother.
- void `fasp_smoother_dcsr_gs_rb3d` (`dvector` *u, `dCSRmat` *A, `dvector` *b, `INT` L, const `INT` order, `INT` *mark, const `INT` maximap, const `INT` nx, const `INT` ny, const `INT` nz)
Colored Gauss-Seidel smoother for Au=b.

10.80.1 Detailed Description

Smoothers for `dCSRmat` matrices.

10.80.2 Function Documentation

10.80.2.1 void `fasp_smoother_dcsr_gs` (`dvector` * u, const `INT` i_1, const `INT` i_n, const `INT` s, `dCSRmat` * A, `dvector` * b, `INT` L)

Gauss-Seidel method as a smoother.

Parameters

<i>u</i>	Pointer to <code>dvector</code> : the unknowns (IN: initial, OUT: approximation)
<i>i_1</i>	Starting index
<i>i_n</i>	Ending index
<i>s</i>	Increasing step
<i>A</i>	Pointer to <code>dBSRmat</code> : the coefficient matrix
<i>b</i>	Pointer to <code>dvector</code> : the right hand side
<i>L</i>	Number of iterations

Gauss-Seidel smoother with C/F ordering for Au=b.

Parameters

<i>u</i>	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>L</i>	Number of iterations
<i>mark</i>	C/F marker array
<i>order</i>	C/F ordering: -1: F-first; 1: C-first

Colored Gauss-Seidel smoother for $Au=b$.

Parameters

<i>u</i>	Initial guess and the new approximation to the solution
<i>A</i>	Pointer to stiffness matrix
<i>b</i>	Pointer to right hand side
<i>L</i>	Number of iterations
<i>order</i>	Ordering: -1: Forward; 1: Backward
<i>mark</i>	Marker for C/F points
<i>maximap</i>	Size of IMAP
<i>nx</i>	Number vertex of X direction
<i>ny</i>	Number vertex of Y direction
<i>nz</i>	Number vertex of Z direction

10.80.2.4 void fasp_smoother_dcsr_ilu (dCSRmat * *A*, dvector * *b*, dvector * *x*, void * *data*)

ILU method as a smoother.

Parameters

<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
<i>data</i>	Pointer to user defined data

10.80.2.5 void fasp_smoother_dcsr_jacobi (dvector * *u*, const INT *i_1*, const INT *i_n*, const INT *s*, dCSRmat * *A*, dvector * *b*, INT *L*)

Jacobi method as a smoother.

Parameters

<i>u</i>	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
<i>i_1</i>	Starting index
<i>i_n</i>	Ending index
<i>s</i>	Increasing step
<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>L</i>	Number of iterations

10.80.2.6 void fasp_smoother_dcsr_kaczmarz (dvector * *u*, const INT *i_1*, const INT *i_n*, const INT *s*, dCSRmat * *A*, dvector * *b*, INT *L*, const REAL *w*)

Kaczmarz method as a smoother.

Parameters

u	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
i_1	Starting index
i_n	Ending index
s	Increasing step
A	Pointer to dBSRmat : the coefficient matrix
b	Pointer to dvector: the right hand side
L	Number of iterations
w	Over-relaxation weight

10.80.2.7 void fasp_smoother_dcsr_L1diag (dvector * u , const INT i_1 , const INT i_n , const INT s , dCSRmat * A , dvector * b , INT L)

Diagonal scaling (using L1 norm) as a smoother.

Parameters

u	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
i_1	Starting index
i_n	Ending index
s	Increasing step
A	Pointer to dBSRmat : the coefficient matrix
b	Pointer to dvector: the right hand side
L	Number of iterations

SOR method as a smoother.

Parameters

u	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
i_1	Starting index
i_n	Ending index
s	Increasing step
A	Pointer to dBSRmat : the coefficient matrix
b	Pointer to dvector: the right hand side
L	Number of iterations
w	Over-relaxation weight

10.80.2.10 void fasp_smoother_dcsr_sor_cf (dvector * u , dCSRmat * A , dvector * b , INT L , const REAL w , INT * $mark$, const INT $order$)

SOR smoother with C/F ordering for $Au=b$.

Parameters

<i>u</i>	Pointer to dvector: the unknowns (IN: initial, OUT: approximation)
<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>L</i>	Number of iterations
<i>w</i>	Over-relaxation weight
<i>mark</i>	C/F marker array
<i>order</i>	C/F ordering: -1: F-first; 1: C-first

Smoothers for [dCSRmat](#) matrices using compatible relaxation.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_smoother_dcsr_gscr](#) (INT pt, INT n, REAL *u, INT *ia, INT *ja, REAL *a, REAL *b, INT L, INT *CF)
Gauss Seidel method restriced to a block.

10.81.1 Detailed Description

Smoothers for [dCSRmat](#) matrices using compatible relaxation.

Note

Restricted-smoothers for compatible relaxation, C/F smoothing, etc.

10.81.2 Function Documentation

10.81.2.1 void [fasp_smoother_dcsr_gscr](#) (INT pt, INT n, REAL * u, INT * ia, INT * ja, REAL * a, REAL * b, INT L, INT * CF)

Gauss Seidel method restriced to a block.

Parameters

<i>pt</i>	Relax type, e.g., cpt, fpt, etc..
<i>n</i>	Number of variables
<i>u</i>	Iterated solution
<i>ia</i>	Row pointer
<i>ja</i>	Column index
<i>a</i>	Pointers to sparse matrix values in CSR format
<i>b</i>	Pointer to right hand side – remove later also as MG relaxation on error eqn
<i>L</i>	Number of iterations
<i>CF</i>	Marker for C, F points

SOR method as the smoother in the user-defined order.
- void [fasp_smoother_dstr_sor_cf](#) (dSTRmat *A, dvector *b, dvector *u, REAL *diaginv, INT *mark, const INT order, const REAL weight)
SOR method as the smoother in the C-F manner.
- void [fasp_generate_diaginv_block](#) (dSTRmat *A, ivector *neigh, dvector *diaginv, ivector *pivot)
Generate inverse of diagonal block for block smoothers.
- void [fasp_smoother_dstr_schwarz](#) (dSTRmat *A, dvector *b, dvector *u, dvector *diaginv, ivector *pivot, ivector *neigh, ivector *order)
Schwarz method as the smoother.

10.83.1 Detailed Description

Smoothers for [dSTRmat](#) matrices.

10.83.2 Function Documentation

10.83.2.1 void fasp_generate_diaginv_block (dSTRmat * *A*, ivector * *neigh*, dvector * *diaginv*, ivector * *pivot*)

Generate inverse of diagonal block for block smoothers.

Parameters

<i>A</i>	Pointer to dCSRmat : the coefficient matrix
<i>neigh</i>	Pointer to ivector: neighborhoods
<i>diaginv</i>	Pointer to dvector: the inverse of the diagonals
<i>pivot</i>	Pointer to ivector: the pivot of diagonal blocks

10.84.2.2 `SHORT fasp_dbsr_getblk (dBSRmat * A, INT * Is, INT * Js, const INT m, const INT n, dBSRmat * B)`

Get a sub BSR matrix of *A* with specified rows and columns.

Parameters

<i>A</i>	Pointer to dBSRmat BSR matrix
<i>B</i>	Pointer to dBSRmat BSR matrix
<i>Is</i>	Pointer to selected rows
<i>Js</i>	Pointer to selected columns
<i>m</i>	Number of selected rows
<i>n</i>	Number of selected columns

Returns

FASP_SUCCESS if succeeded, otherwise return error information.

Author

Shiquan Zhang, Xiaozhe Hu

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 160 of file sparse_block.c.

10.84.2.3 `dCSRmat fasp_dbsr_getblk_dcsr (dBSRmat * A)`

get [dCSRmat](#) block from a [dBSRmat](#) matrix

Parameters

<i>*A</i>	Pointer to the BSR format matrix
-----------	----------------------------------

Returns

[dCSRmat](#) matrix if succeed, NULL if fail

Author

Xiaozhe Hu

Date

03/16/2012

Definition at line 256 of file sparse_block.c.

10.84.2.4 **dCSRmat fasp_dbsr_Linfinity_dcsr (dBSRmat * A)**

get [dCSRmat](#) from a [dBSRmat](#) matrix using L_infinity norm of each small block

Parameters

<i>*A</i>	Pointer to the BSR format matrix
-----------	----------------------------------

Returns

[dCSRmat](#) matrix if succeed, NULL if fail

Author

Xiaozhe Hu

Date

05/25/2014

Definition at line 312 of file sparse_block.c.

10.84.2.5 **SHORT fasp_dcsr_getblk (dCSRmat * A, INT * Is, INT * Js, const INT m, const INT n, dCSRmat * B)**

Get a sub CSR matrix of A with specified rows and columns.

Parameters

<i>A</i>	Pointer to dCSRmat matrix
<i>B</i>	Pointer to dCSRmat matrix
<i>Is</i>	Pointer to selected rows
<i>Js</i>	Pointer to selected columns

m	Number of selected rows
n	Number of selected columns

Returns

FASP_SUCCESS if succeeded, otherwise return error information.

10.85 sparse_bsr.c File Reference

Sparse matrix operations for [dBSRmat](#) matrices.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [dBSRmat fasp_dbsr_create](#) (const [INT](#) ROW, const [INT](#) COL, const [INT](#) NNZ, const [INT](#) nb, const [INT](#) storage_manner)

Create BSR sparse matrix data memory space.
- void [fasp_dbsr_alloc](#) (const [INT](#) ROW, const [INT](#) COL, const [INT](#) NNZ, const [INT](#) nb, const [INT](#) storage_manner, [dBSRmat](#) *A)

Allocate memory space for BSR format sparse matrix.
- void [fasp_dbsr_free](#) ([dBSRmat](#) *A)

Free memory space for BSR format sparse matrix.
- void [fasp_dbsr_null](#) ([dBSRmat](#) *A)

Initialize sparse matrix on structured grid.
- void [fasp_dbsr_cp](#) ([dBSRmat](#) *A, [dBSRmat](#) *B)

copy a [dCSRmat](#) to a new one B=A
- [INT fasp_dbsr_trans](#) ([dBSRmat](#) *A, [dBSRmat](#) *AT)

Find A^T from given [dBSRmat](#) matrix A.
- [SHORT fasp_dbsr_diagpref](#) ([dBSRmat](#) *A)

Reorder the column and data arrays of a square BSR matrix, so that the first entry in each row is the diagonal one.
- [dvector fasp_dbsr_getdiaginv](#) ([dBSRmat](#) *A)

Get D^{-1} of matrix A.
- [dBSRmat fasp_dbsr_diaginv](#) ([dBSRmat](#) *A)

- Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.
- `dBSRmat fasp_dbsr_diaginv2 (dBSRmat *A, REAL *diaginv)`
Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.
- `dBSRmat fasp_dbsr_diaginv3 (dBSRmat *A, REAL *diaginv)`
Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.
- `dBSRmat fasp_dbsr_diaginv4 (dBSRmat *A, REAL *diaginv)`
Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.
- `void fasp_dbsr_getdiag (INT n, dBSRmat *A, REAL *diag)`
Abstract the diagonal blocks of a BSR matrix.
- `dBSRmat fasp_dbsr_diagLU (dBSRmat *A, REAL *DL, REAL *DU)`
Compute $B := DL * A * DU$. We decompose each diagonal block of A into LDU form and $DL = \text{diag}(L^{-1})$ and $DU = \text{diag}(U^{-1})$.
- `dBSRmat fasp_dbsr_diagLU2 (dBSRmat *A, REAL *DL, REAL *DU)`
Compute $B := DL * A * DU$. We decompose each diagonal block of A into LDU form and $DL = \text{diag}(L^{-1})$ and $DU = \text{diag}(U^{-1})$.

10.85.1 Detailed Description

Sparse matrix operations for `dBSRmat` matrices.

10.85.2 Function Documentation

10.85.2.1 `void fasp_dbsr_alloc (const INT ROW, const INT COL, const INT NNZ, const INT nb, const INT storage_manner, dBSRmat * A)`

Allocate memory space for BSR format sparse matrix.

Parameters

<i>ROW</i>	Number of rows of block
<i>COL</i>	Number of columns of block
<i>NNZ</i>	Number of nonzero blocks
<i>nb</i>	Dimension of each block
<i>storage_manner</i>	Storage manner for each sub-block
<i>A</i>	Pointer to new <code>dBSRmat</code> matrix

Author

Xiaozhe Hu

Date

10/26/2010

Definition at line 87 of file `sparse_bsr.c`.

10.85.2.2 `void fasp_dbsr_cp (dBSRmat * A, dBSRmat * B)`

copy a `dCSRmat` to a new one B=A

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>B</i>	Pointer to the dBSRmat matrix

Author

Xiaozhe Hu

Date

08/07/2011

Definition at line 181 of file sparse_bsr.c.

10.85.2.3 [dBSRmat](#) fasp_dbsr_create (const INT *ROW*, const INT *COL*, const INT *NNZ*, const INT *nb*, const INT *storage_manner*)

Create BSR sparse matrix data memory space.

Parameters

<i>ROW</i>	Number of rows of block
<i>COL</i>	Number of columns of block
<i>NNZ</i>	Number of nonzero blocks
<i>nb</i>	Dimension of each block
<i>storage_manner</i>	Storage manner for each sub-block

Returns

A The new [dBSRmat](#) matrix

Author

Xiaozhe Hu

Date

10/26/2010

Definition at line 36 of file sparse_bsr.c.

10.85.2.4 [dBSRmat](#) fasp_dbsr_diagin ([dBSRmat](#) * *A*)

Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
----------	---

Author

Zhiyang Zhou

Date

2010/10/26

Note

Works for general nb (Xiaozhe)

Modified by Chunsheng Feng, Zheng Li on 08/25/2012

Definition at line 496 of file sparse_bsr.c.

10.85.2.5 dBSRmat fasp_dbsr_diaginv2 (dBSRmat * A, REAL * diaginv)Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>diaginv</i>	Pointer to the inverses of all the diagonal blocks

Author

Zhiyang Zhou

Date

2010/11/07

Note

Works for general nb (Xiaozhe)

Definition at line 660 of file sparse_bsr.c.

10.85.2.6 dBSRmat fasp_dbsr_diaginv3 (dBSRmat * A, REAL * diaginv)Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>diaginv</i>	Pointer to the inverses of all the diagonal blocks

Returns

BSR matrix after diagonal scaling

Author

Xiaozhe Hu

Date

12/25/2010

Note

Works for general nb (Xiaozhe)

Modified by Xiaozhe Hu on 05/26/2012

Definition at line 762 of file sparse_bsr.c.

10.85.2.7 dBSRmat fasp_dbsr_diaginv4 (dBSRmat * A, REAL * diaginv)Compute $B := D^{-1} * A$, where 'D' is the block diagonal part of A.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
<i>diaginv</i>	Pointer to the inverses of all the diagonal blocks

Returns

BSR matrix after diagonal scaling

Note

Works for general nb (Xiaozhe)

A is pre-ordered that the first block of each row is the diagonal block!

10.85.2.11 void fasp_dbsr_free (dBSRmat * *A*)

Free memory space for BSR format sparse matrix.

Parameters

<i>A</i>	Pointer to the dBSRmat matrix
----------	---

Author

Xiaozhe Hu

Date

10/26/2010

Definition at line 133 of file sparse_bsr.c.

10.85.2.12 fasp_dbsr_getdiag (INT *n*, dBSRmat * *A*, REAL * *diag*)

Abstract the diagonal blocks of a BSR matrix.

Parameters

<i>n</i>	Number of blocks to get
<i>A</i>	Pointer to the 'dBSRmat' type matrix
<i>diag</i>	Pointer to array which stores the diagonal blocks in row by row manner

Author

Zhiyang Zhou

10.86 sparse_coo.c File Reference

Sparse matrix operations for dCOOmat matrices.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- dCOOmat fasp_dcoo_create (const INT m, const INT n, const INT nnz)
Create IJ sparse matrix data memory space.
- void fasp_dcoo_alloc (const INT m, const INT n, const INT nnz, dCOOmat *A)
Allocate COO sparse matrix memory space.
- void fasp_dcoo_free (dCOOmat *A)
Free IJ sparse matrix data memory space.
- void fasp_dcoo_shift (dCOOmat *A, const INT offset)
Re-index a REAL matrix in IJ format to make the index starting from 0 or 1.

10.86.1 Detailed Description

Sparse matrix operations for dCOOmat matrices.

10.86.2 Function Documentation

10.86.2.1 void fasp_dcoo_alloc (const INT m, const INT n, const INT nnz, dCOOmat * A)

Allocate COO sparse matrix memory space.

Parameters

m	Number of rows
n	Number of columns
nnz	Number of nonzeros
A	Pointer to the dCSRmat matrix

Author

Xiaozhe Hu

Date

03/25/2013

Definition at line 62 of file sparse_coo.c.

10.86.2.2 [dCOOmat](#) fasp_dcoo_create (const INT m , const INT n , const INT nnz)

Create IJ sparse matrix data memory space.

Parameters

m	Number of rows
n	Number of columns
nnz	Number of nonzeros

Returns

A The new [dCOOmat](#) matrix

Author

Chensong Zhang

Date

2010/04/06

Definition at line 34 of file sparse_coo.c.

10.86.2.3 void fasp_dcoo_free ([dCOOmat](#) * A)

Free IJ sparse matrix data memory space.

Parameters

A	Pointer to the dCOOmat matrix
-----	---

Author

Chensong Zhang

Date

2010/04/03

Definition at line 94 of file sparse_coo.c.

10.86.2.4 void fasp_dcoo_shift (dCOOmat * A, const INT offset)

Re-index a REAL matrix in IJ format to make the index starting from 0 or 1.

Parameters

<i>A</i>	Pointer to IJ matrix
<i>offset</i>	Size of offset (1 or -1)

Author

Chensong Zhang

Date

2010/04/06

Modified by Chunsheng Feng, Zheng Li on 08/25/2012

Definition at line 116 of file sparse_coo.c.

10.87 sparse_csr.c File Reference

Sparse matrix operations for dCSRmat matrices.

```
#include <math.h>
#include <time.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- [dCSRmat fasp_dcsr_create](#) (const INT m, const INT n, const INT nnz)
Create CSR sparse matrix data memory space.
- [iCSRmat fasp_icsr_create](#) (const INT m, const INT n, const INT nnz)
Create CSR sparse matrix data memory space.
- void [fasp_dcsr_alloc](#) (const INT m, const INT n, const INT nnz, dCSRmat *A)
Allocate CSR sparse matrix memory space.
- void [fasp_dcsr_free](#) (dCSRmat *A)
Free CSR sparse matrix data memory space.
- void [fasp_icsr_free](#) (iCSRmat *A)
Free CSR sparse matrix data memory space.
- void [fasp_dcsr_null](#) (dCSRmat *A)
Initialize CSR sparse matrix.
- void [fasp_icsr_null](#) (iCSRmat *A)
Initialize CSR sparse matrix.
- [dCSRmat fasp_dcsr_perm](#) (dCSRmat *A, INT *P)
Apply permutation of A, i.e. Aperm=PAP' by the orders given in P.
- void [fasp_dcsr_sort](#) (dCSRmat *A)

- Sort each row of A in ascending order w.r.t. column indices.
- void `fasp_dcsr_getdiag` (INT n , `dCSRmat` $*A$, `dvector` $*diag$)
Get first n diagonal entries of a CSR matrix A .
- void `fasp_dcsr_getcol` (const INT n , `dCSRmat` $*A$, REAL $*col$)
Get the n -th column of a CSR matrix A .
- void `fasp_dcsr_diagpref` (`dCSRmat` $*A$)
Re-order the column and data arrays of a CSR matrix, so that the first entry in each row is the diagonal.
- `SHORT` `fasp_dcsr_regdiag` (`dCSRmat` $*A$, REAL $value$)
Regularize diagonal entries of a CSR sparse matrix.
- void `fasp_icsr_cp` (`iCSRmat` $*A$, `iCSRmat` $*B$)
Copy a `iCSRmat` to a new one $B=A$.
- void `fasp_dcsr_cp` (`dCSRmat` $*A$, `dCSRmat` $*B$)
copy a `dCSRmat` to a new one $B=A$
- void `fasp_icsr_trans` (`iCSRmat` $*A$, `iCSRmat` $*AT$)
Find transpose of `iCSRmat` matrix A .
- INT `fasp_dcsr_trans` (`dCSRmat` $*A$, `dCSRmat` $*AT$)
Find transpose of `dCSRmat` matrix A .
- void `fasp_dcsr_transpose` (INT $*row[2]$, INT $*col[2]$, REAL $*val[2]$, INT $*nn$, INT $*tniz$)
- void `fasp_dcsr_compress` (`dCSRmat` $*A$, `dCSRmat` $*B$, REAL $dtol$)
Compress a CSR matrix A and store in CSR matrix B by dropping small entries $abs(a_{ij}) \leq dtol$.
- `SHORT` `fasp_dcsr_compress_inplace` (`dCSRmat` $*A$, REAL $dtol$)
Compress a CSR matrix A IN PLACE by dropping small entries $abs(a_{ij}) \leq dtol$.
- void `fasp_dcsr_shift` (`dCSRmat` $*A$, INT $offset$)
Re-index a REAL matrix in CSR format to make the index starting from 0 or 1.
- void `fasp_dcsr_symdiagscale` (`dCSRmat` $*A$, `dvector` $*diag$)
Symmetric diagonal scaling $D^{-1/2}AD^{-1/2}$.
- `dCSRmat` `fasp_dcsr_sympat` (`dCSRmat` $*A$)
Get symmetric part of a `dCSRmat` matrix.
- void `fasp_dcsr_multicoloring` (`dCSRmat` $*A$, INT $*flags$, INT $*groups$)
Use the greedy multi-coloring to get color groups of the adjacency graph of A .
- void `fasp_dcsr_transz` (`dCSRmat` $*A$, INT $*p$, `dCSRmat` $*AT$)
Generalized transpose of A : $(n \times m)$ matrix given in `dCSRmat` format.
- `dCSRmat` `fasp_dcsr_permz` (`dCSRmat` $*A$, INT $*p$)
Permute rows and cols of A , i.e. $A=PAP'$ by the ordering in p .
- void `fasp_dcsr_sortz` (`dCSRmat` $*A$, const `SHORT` $isym$)
Sort each row of A in ascending order w.r.t. column indices.

10.87.1 Detailed Description

Sparse matrix operations for `dCSRmat` matrices.

10.87.2 Function Documentation

10.87.2.1 void fasp_dcsr_alloc (const INT m , const INT n , const INT nnz , `dCSRmat` $*A$)

Allocate CSR sparse matrix memory space.

Parameters

<i>m</i>	Number of rows
<i>n</i>	Number of columns
<i>nnz</i>	Number of nonzeros
<i>A</i>	Pointer to the dCSRmat matrix

Author

Chensong Zhang

Date

2010/04/06

Definition at line 125 of file sparse_csr.c.

10.87.2.2 void fasp_dcsr_compress ([dCSRmat](#) * *A*, [dCSRmat](#) * *B*, REAL *dtol*)

Compress a CSR matrix A and store in CSR matrix B by dropping small entries $\text{abs}(a_{ij}) \leq \text{dtol}$.

Parameters

<i>A</i>	Pointer to dCSRmat CSR matrix
<i>B</i>	Pointer to dCSRmat CSR matrix
<i>dtol</i>	Drop tolerance

Author

Shiquan Zhang

Date

03/10/2010

Modified by Chunsheng Feng, Zheng Li on 08/25/2012

Definition at line 957 of file sparse_csr.c.

10.87.2.3 **SHORT** fasp_dcsr_compress_inplace ([dCSRmat](#) * *A*, REAL *dtol*)

Compress a CSR matrix A IN PLACE by dropping small entries $\text{abs}(a_{ij}) \leq \text{dtol}$.

Parameters

<i>A</i>	Pointer to dCSRmat CSR matrix
<i>dtol</i>	Drop tolerance

Author

Xiaozhe Hu

12/25/2010

Modified by Chensong Zhang on 02/21/2013

Note

This routine can be modified for filtering.

Definition at line 1037 of file sparse_csr.c.

10.87.2.4 void fasp_dcsr_cp (dCSRmat * *A*, dCSRmat * *B*)

copy a dCSRmat to a new one B=A

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
<i>B</i>	Pointer to the dCSRmat matrix

Author

Chensong Zhang

Date

04/06/2010

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 723 of file sparse_csr.c.

10.87.2.5 dCSRmat fasp_dcsr_create (const INT *m*, const INT *n*, const INT *nnz*)

Create CSR sparse matrix data memory space.

Parameters

<i>m</i>	Number of rows
<i>n</i>	Number of columns
<i>nnz</i>	Number of nonzeros

Returns

A the new dCSRmat matrix

Author

Chensong Zhang

Date

2010/04/06

Definition at line 34 of file sparse_csr.c.

10.87.2.6 void fasp_dcsr_diagpref (dCSRmat * A)

Re-order the column and data arrays of a CSR matrix, so that the first entry in each row is the diagonal.

Parameters

<i>A</i>	Pointer to the matrix to be re-ordered
----------	--

Author

Zhiyang Zhou

Date

09/09/2010

Author

Chunsheng Feng, Zheng Li

Date

Note

Reordering is done in place.

Modified by Chensong Zhang on Dec/21/2012

Definition at line 553 of file sparse_csr.c.

10.87.2.7 `void fasp_dcsr_free (dCSRmat * A)`

Free CSR sparse matrix data memory space.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
----------	---

Author

Chensong Zhang

Date

2010/04/06

Definition at line 166 of file sparse_csr.c.

10.87.2.8 `void fasp_dcsr_getcol (const INT n, dCSRmat * A, REAL * col)`

Get the *n*-th column of a CSR matrix *A*.

Parameters

<i>n</i>	Index of a column of A ($0 \leq n \leq A.col-1$)
<i>A</i>	Pointer to dCSRmat CSR matrix
<i>col</i>	Pointer to the column

Author

Xiaozhe Hu

Date

11/07/2009

Modified by Chunsheng Feng, Zheng Li on 07/08/2012

Definition at line 474 of file sparse_csr.c.

10.87.2.9 void fasp_dcsr_getdiag (INT *n*, dCSRmat * *A*, dvector * *diag*)

Get first *n* diagonal entries of a CSR matrix *A*.

Parameters

<i>n</i>	Number of diagonal entries to get (if <i>n</i> =0, then get all diagonal entries)
<i>A</i>	Pointer to dCSRmat CSR matrix
<i>diag</i>	Pointer to the diagonal as a dvector

Author

Chensong Zhang

Date

05/20/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 410 of file sparse_csr.c.

10.87.2.10 void fasp_dcsr_multicoloring (dCSRmat * *A*, INT * *flags*, INT * *groups*)

Use the greedy multi-coloring to get color groups of the adjacency graph of *A*.

Parameters

<i>A</i>	Input dCSRmat
<i>flags</i>	flags for the independent group
<i>groups</i>	Return group numbers

Author

Chunsheng Feng

Date

09/15/2012

Definition at line 1265 of file sparse_csr.c.

10.87.2.11 void fasp_dcsr_null (dCSRmat * A)

Initialize CSR sparse matrix.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
----------	---

Author

Chensong Zhang

Date

2010/04/03

Definition at line 204 of file sparse_csr.c.

10.87.2.12 dCSRmat fasp_dcsr_perm (dCSRmat * A, INT * P)

Apply permutation of A, i.e. Aperm=PAP' by the orders given in P.

Parameters

<i>A</i>	Pointer to the original dCSRmat matrix
<i>P</i>	Pointer to orders

Returns

The new ordered [dCSRmat](#) matrix if succeed, NULL if fail

Author

Shiquan Zhang

Date

03/10/2010

Note

P[i] = k means k-th row and column become i-th row and column!
Deprecated! Will be replaced by fasp_dcsr_permz later. –Chensong

Modified by Chunsheng Feng, Zheng Li on 07/12/2012

Definition at line 247 of file sparse_csr.c.

10.87.2.13 dCSRmat fasp_dcsr_permz (dCSRmat * A, INT * p)

Permute rows and cols of A, i.e. A=PAP' by the ordering in p.

Parameters

A	Pointer to the original dCSRmat matrix
p	Pointer to ordering

Note

This is just applying twice `fasp_dcsr_transz(&A,p,At)`.
In matlab notation: `Aperm=A(p,p)`;

Returns

The new ordered [dCSRmat](#) matrix if succeed, NULL if fail

Definition at line 1486 of file `sparse_csr.c`.

10.87.2.14 `SHORT fasp_dcsr_regdiag (dCSRmat * A, REAL value)`

Regularize diagonal entries of a CSR sparse matrix.

Parameters

A	Pointer to the dCSRmat matrix
$value$	Set a value on <code>diag(A)</code> which is too close to zero to "value"

Returns

FASP_SUCCESS if no diagonal entry is close to zero, else ERROR

Author

Shiquan Zhang

Definition at line 659 of file `sparse_csr.c`.

10.87.2.15 `void fasp_dcsr_shift (dCSRmat * A, INT offset)`

Re-index a REAL matrix in CSR format to make the index starting from 0 or 1.

Parameters

<i>A</i>	Pointer to CSR matrix
<i>offset</i>	Size of offset (1 or -1)

Author

Chensong Zhang

Date

04/06/2010

Modified by Chunsheng Feng, Zheng Li on 07/11/2012

Definition at line 1085 of file sparse_csr.c.

10.87.2.16 void fasp_dcsr_sort (dCSRmat * A)

Sort each row of A in ascending order w.r.t. column indices.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
----------	---

Author

Shiquan Zhang

Date

06/10/2010

Definition at line 358 of file sparse_csr.c.

10.87.2.17 void fasp_dcsr_sortz (dCSRmat * A, const SHORT isym)

Sort each row of A in ascending order w.r.t. column indices.

Parameters

<i>A</i>	Pointer to the dCSRmat matrix
<i>isym</i>	Flag for symmetry, =[0/nonzero]=[general/symmetric] matrix

Note

Applying twice [fasp_dcsr_transz\(\)](#), if A is symmetric, then the transpose is applied only once and then AT copied on A.

Ludmil Zikatanov

Date

19951219 (Fortran), 20150912 (C)

Definition at line 1518 of file sparse_csr.c.

10.87.2.18 void fasp_dcsr_symdiagscale (dCSRmat * A, dvector * diag)

Symmetric diagonal scaling $D^{-1/2}AD^{-1/2}$.

Parameters

A	Pointer to the dCSRmat matrix
diag	Pointer to the diagonal entries

Author

Xiaozhe Hu

Date

01/31/2011

Modified by Chunsheng Feng, Zheng Li on 07/11/2012

Definition at line 1146 of file sparse_csr.c.

10.87.2.19 dCSRmat fasp_dcsr_sympat (dCSRmat * A)

Get symmetric part of a dCSRmat matrix.

Parameters

*A	pointer to the dCSRmat matrix
----	-------------------------------

Returns

symmetrized the dCSRmat matrix

Author

Xiaozhe Hu

Date

03/21/2011

Definition at line 1232 of file sparse_csr.c.

10.87.2.20 void fasp_dcsr_trans (dCSRmat * A, dCSRmat * AT)

Find transpose of dCSRmat matrix A.

Parameters

A	Pointer to the dCSRmat matrix
---	-------------------------------

<i>AT</i>	Pointer to the transpose of dCSRmat matrix A (output)
-----------	---

Author

Chensong Zhang

Date

04/06/2010

Modified by Chunsheng Feng, Zheng Li on 06/20/2012

Definition at line 826 of file sparse_csr.c.

10.87.2.21 void fasp_dcsr_transz (dCSRmat * A, INT * p, dCSRmat * AT)

Generalized transpose of A: (n x m) matrix given in [dCSRmat](#) format.**Parameters**

<i>A</i>	Pointer to matrix in dCSRmat for transpose, INPUT
<i>p</i>	Permutation, INPUT
<i>AT</i>	Pointer to matrix AT = transpose(A) if p = NULL, OR AT = transpose(A)p if p is not NULL

Note

The storage for all pointers in AT should already be allocated, i.e. AT->IA, AT->JA and AT->val should be allocated before calling this function. If A.val=NULL, then AT->val[] is not changed.

performs AT=transpose(A)p, where p is a permutation. If p=NULL then p=I is assumed. Applying twice this procedure one gets At=transpose(transpose(A)p)p = transpose(p)Ap, which is the same A with rows and columns permuted according to p.

If A=NULL, then only transposes/permutates the structure of A.

For p=NULL, applying this two times A->AT->A orders all the row indices in A in increasing order.

10.87.2.22 void fasp_icsr_cp (iCSRmat * A, iCSRmat * B)

Copy a [iCSRmat](#) to a new one B=A.

Parameters

<i>A</i>	Pointer to the iCSRmat matrix
<i>B</i>	Pointer to the iCSRmat matrix

Author

Chensong Zhang

Date

05/16/2013

Definition at line 698 of file sparse_csr.c.

10.87.2.23 iCSRmat fasp_icshr_create (const INT *m*, const INT *n*, const INT *nnz*)

Create CSR sparse matrix data memory space.

Parameters

<i>m</i>	Number of rows
<i>n</i>	Number of columns
<i>nnz</i>	Number of nonzeros

Returns

A the new [iCSRmat](#) matrix

Author

Chensong Zhang

Date

2010/04/06

Definition at line 80 of file sparse_csr.c.

10.87.2.24 void fasp_icshr_free (iCSRmat * *A*)

Free CSR sparse matrix data memory space.

Parameters

<i>A</i>	Pointer to the iCSRmat matrix
----------	---

Author

Chensong Zhang

Date

2010/04/06

Definition at line 185 of file sparse_csr.c.

10.87.2.25 void fasp_icsr_null (iCSRmat * A)

Initialize CSR sparse matrix.

Parameters

<i>A</i>	Pointer to the iCSRmat matrix
----------	---

Author

Chensong Zhang

Date

2010/04/03

Definition at line 221 of file sparse_csr.c.

10.87.2.26 void fasp_icsr_trans (iCSRmat * *A*, iCSRmat * *AT*)

Find transpose of [iCSRmat](#) matrix *A*.

Parameters

<i>A</i>	Pointer to the iCSRmat matrix <i>A</i>
<i>AT</i>	Pointer to the iCSRmat matrix <i>A'</i>

Returns

The transpose of [iCSRmat](#) matrix *A*

#include "fasp_funcs.h"
```

Functions

- void [fasp_sparse_abybms_](#) (INT *ia, INT *ja, INT *ib, INT *jb, INT *nap, INT *map, INT *mbp, INT *ic, INT *jc)
Multiplication of two sparse matrices: calculating the nonzero structure of the result if jc is not null. If jc is null only finds num of nonzeros.
- void [fasp_sparse_abyb_](#) (INT *ia, INT *ja, REAL *a, INT *ib, INT *jb, REAL *b, INT *nap, INT *map, INT *mbp, INT *ic, INT *jc, REAL *c)
Multiplication of two sparse matrices: calculating the numerical values in the result.
- void [fasp_sparse_iit_](#) (INT *ia, INT *ja, INT *na, INT *ma, INT *iat, INT *jat)
Transpose a boolean matrix (only given by ia, ja)

- void `fasp_sparse_aat_` (INT *ia, INT *ja, REAL *a, INT *na, INT *ma, INT *iat, INT *jat, REAL *at)
transpose a boolean matrix (only given by ia, ja)
- void `fasp_sparse_aplbms_` (INT *ia, INT *ja, INT *ib, INT *jb, INT *nab, INT *mab, INT *ic, INT *jc)
Addition of two sparse matrices: calculating the nonzero structure of the result if jc is not null. if jc is null only finds num of nonzeros.
- void `fasp_sparse_aplusb_` (INT *ia, INT *ja, REAL *a, INT *ib, INT *jb, REAL *b, INT *nab, INT *mab, INT *ic, INT *jc, REAL *c)
Addition of two sparse matrices: calculating the numerical values in the result.
- void `fasp_sparse_rapms_` (INT *ir, INT *jr, INT *ia, INT *ja, INT *ip, INT *jp, INT *nin, INT *ncin, INT *iac, INT *jac, INT *maxrout)
*Calculates the nonzero structure of $R*A*P$, if jac is not null. If jac is null only finds num of nonzeros.*
- void `fasp_sparse_wtams_` (INT *jw, INT *ia, INT *ja, INT *nwp, INT *map, INT *jv, INT *nvp, INT *icp)
Finds the nonzeros in the result of $v^t = w^t A$, where w is a sparse vector and A is sparse matrix. jv is an integer array containing the indices of the nonzero elements in the result.
- void `fasp_sparse_wta_` (INT *jw, REAL *w, INT *ia, INT *ja, REAL *a, INT *nwp, INT *map, INT *jv, REAL *v, INT *nvp)
Calculate $v^t = w^t A$, where w is a sparse vector and A is sparse matrix. v is an array of dimension = number of columns in A.
- void `fasp_sparse_ytxbig_` (INT *jy, REAL *y, INT *nyp, REAL *x, REAL *s)
Calculates $s = y^t x$. y-sparse, x - no.
- void `fasp_sparse_ytx_` (INT *jy, REAL *y, INT *jx, REAL *x, INT *nyp, INT *npx, INT *icp, REAL *s)
Calculates $s = y^t x$. y is sparse, x is sparse.
- void `fasp_sparse_rapcmp_` (INT *ir, INT *jr, REAL *r, INT *ia, INT *ja, REAL *a, INT *ipt, INT *jpt, REAL *pt, INT *nin, INT *ncin, INT *iac, INT *jac, REAL *ac, INT *idummy)
*Calculates $R*A*P$ after the nonzero structure of the result is known. iac,jac,ac have to be allocated before call to this function.*
- `ivector fasp_sparse_MIS` (dCSRmat *A)
get the maximal independet set of a CSR matrix

10.90.1 Detailed Description

Routines for sparse matrix operations.

Note

Most algorithms work as follows: (a) Boolean operations (to determine the nonzero structure); (b) Numerical part, where the result is calculated.

: Parameter notation :I: is input; :O: is output; :IO: is both

C-version: by Ludmil Zikatanov 2010-04-08 tested 2010-04-08

: Modified Xiaozhe Hu 2010-10-18

Todo Remove unwanted functions from this file. –Chensong

10.90.2 Function Documentation

10.90.2.1 void `fasp_sparse_aat_` (INT * ia, INT * ja, REAL * a, INT * na, INT * ma, INT * iat, INT * jat, REAL * at)

transpose a boolean matrix (only given by ia, ja)

Parameters

<i>ia</i>	array of row pointers (as usual in CSR)
<i>ja</i>	array of column indices
<i>a</i>	array of entries of the input
<i>na</i>	number of rows of A
<i>ma</i>	number of cols of A
<i>iat</i>	array of row pointers in the result
<i>jat</i>	array of column indices
<i>at</i>	array of entries of the result

Definition at line 272 of file sparse_util.c.

10.90.2.2 void fasp_sparse_abyb_ (INT * *ia*, INT * *ja*, REAL * *a*, INT * *ib*, INT * *jb*, REAL * *b*, INT * *nap*, INT * *map*, INT * *mbp*, INT * *ic*, INT * *jc*, REAL * *c*)

Multiplication of two sparse matrices: calculating the numerical values in the result.

Parameters

<i>ia</i>	array of row pointers 1st multiplicand
<i>ja</i>	array of column indices 1st multiplicand
<i>a</i>	entries of the 1st multiplicand
<i>ib</i>	array of row pointers 2nd multiplicand
<i>jb</i>	array of column indices 2nd multiplicand
<i>b</i>	entries of the 2nd multiplicand
<i>ic</i>	array of row pointers in c=a*b
<i>jc</i>	array of column indices in c=a*b
<i>c</i>	entries of the result: c= a*b
<i>nap</i>	number of rows in the 1st multiplicand
<i>map</i>	number of columns in the 1st multiplicand
<i>mbp</i>	number of columns in the 2nd multiplicand

Modified by Chensong Zhang on 09/11/2012

Definition at line 124 of file sparse_util.c.

10.90.2.3 void fasp_sparse_abybms_ (INT * *ia*, INT * *ja*, INT * *ib*, INT * *jb*, INT * *nap*, INT * *map*, INT * *mbp*, INT * *ic*, INT * *jc*)

Multiplication of two sparse matrices: calculating the nonzero structure of the result if jc is not null. If jc is null only finds num of nonzeros.

Parameters

<i>ia</i>	array of row pointers 1st multiplicand
<i>ia</i>	array of row pointers 1st multiplicand
<i>ja</i>	array of column indices 1st multiplicand
<i>ib</i>	array of row pointers 2nd multiplicand
<i>jb</i>	array of column indices 2nd multiplicand
<i>nap</i>	number of rows of A

<i>map</i>	number of cols of A
<i>mbp</i>	number of cols of b
<i>ic</i>	array of row pointers in the result (this is also computed here again, so that we can have a stand alone call of this routine, if for some reason the number of nonzeros in the result is known)
<i>jc</i>	array of column indices in the result $c=a*b$

Modified by Chensong Zhang on 09/11/2012

Definition at line 53 of file sparse_util.c.

10.90.2.4 void fasp_sparse_aplbms_ (INT * *ia*, INT * *ja*, INT * *ib*, INT * *jb*, INT * *nab*, INT * *mab*, INT * *ic*, INT * *jc*)

Addition of two sparse matrices: calculating the nonzero structure of the result if *jc* is not null. if *jc* is null only finds num of nonzeros.

Parameters

<i>ia</i>	array of row pointers 1st summand
<i>ja</i>	array of column indices 1st summand
<i>ib</i>	array of row pointers 2nd summand
<i>jb</i>	array of column indices 2nd summand
<i>nab</i>	number of rows
<i>mab</i>	number of cols
<i>ic</i>	array of row pointers in the result (this is also computed here again, so that we can have a stand alone call of this routine, if for some reason the number of nonzeros in the result is known)
<i>jc</i>	array of column indices in the result $c=a+b$

Definition at line 359 of file sparse_util.c.

10.90.2.5 void fasp_sparse_aplusb_ (INT * *ia*, INT * *ja*, REAL * *a*, INT * *ib*, INT * *jb*, REAL * *b*, INT * *nab*, INT * *mab*, INT * *ic*, INT * *jc*, REAL * *c*)

Addition of two sparse matrices: calculating the numerical values in the result.

Parameters

<i>ia</i>	array of row pointers 1st summand
<i>ja</i>	array of column indices 1st summand
<i>a</i>	entries of the 1st summand
<i>ib</i>	array of row pointers 2nd summand
<i>jb</i>	array of column indices 2nd summand
<i>b</i>	entries of the 2nd summand
<i>nab</i>	number of rows
<i>mab</i>	number of cols
<i>ic</i>	array of row pointers in $c=a+b$
<i>jc</i>	array of column indices in $c=a+b$
<i>c</i>	entries of the result: $c=a+b$

Definition at line 431 of file sparse_util.c.

10.90.2.6 void fasp_sparse_iit_ (INT * *ia*, INT * *ja*, INT * *na*, INT * *ma*, INT * *iat*, INT * *jat*)

Transpose a boolean matrix (only given by *ia*, *ja*)

Parameters

<i>ia</i>	array of row pointers (as usual in CSR)
<i>ja</i>	array of column indices
<i>na</i>	number of rows
<i>ma</i>	number of cols
<i>iat</i>	array of row pointers in the result
<i>jat</i>	array of column indices

Note

For the concrete algorithm, see:

Definition at line 197 of file sparse_util.c.

10.90.2.7 ivector fasp_sparse_MIS (dCSRmat * A)

get the maximal independet set of a CSR matrix

Parameters

<i>A</i>	pointer to the matrix
----------	-----------------------

Note

: only use the sparsity of A, index starts from 1 (fortran)!!

information of A

work space

return

Definition at line 909 of file sparse_util.c.

10.90.2.8 void fasp_sparse_rapcmp_ (INT * *ir*, INT * *jr*, REAL * *r*, INT * *ia*, INT * *ja*, REAL * *a*, INT * *ipt*, INT * *jpt*, REAL * *pt*, INT * *nin*, INT * *ncin*, INT * *iac*, INT * *jac*, REAL * *ac*, INT * *idummy*)

Calculates $R \cdot A \cdot P$ after the nonzero structure of the result is known. *iac*, *jac*, *ac* have to be allocated before call to this function.

Note

:I: is input :O: is output :IO: is both

Parameters

<i>ir</i>	:I: array of row pointers for R
<i>jr</i>	:I: array of column indices for R
<i>r</i>	:I: entries of R

<i>ia</i>	:I: array of row pointers for A
<i>ja</i>	:I: array of column indices for A
<i>a</i>	:I: entries of A
<i>ipt</i>	:I: array of row pointers for P
<i>jpt</i>	:I: array of column indices for P
<i>pt</i>	:I: entries of P
<i>nin</i>	:I: number of rows in R
<i>ncin</i>	:I: number of rows in
<i>iac</i>	:O: array of row pointers for P
<i>jac</i>	:O: array of column indices for P
<i>ac</i>	:O: entries of P
<i>idummy</i>	not changed

Note

compute $R*A*P$ for known nonzero structure of the result the result is stored in iac,jac,ac!

Definition at line 788 of file sparse_util.c.

10.90.2.9 void fasp_sparse_rapms_ (INT * *ir*, INT * *jr*, INT * *ia*, INT * *ja*, INT * *ip*, INT * *jp*, INT * *nin*, INT * *ncin*, INT * *iac*, INT * *jac*, INT * *maxrout*)

Calculates the nonzero structure of $R*A*P$, if jac is not null. If jac is null only finds num of nonzeros.

Note

:I: is input :O: is output :IO: is both

Parameters

<i>ir</i>	:I: array of row pointers for R
<i>jr</i>	:I: array of column indices for R
<i>ia</i>	:I: array of row pointers for A
<i>ja</i>	:I: array of column indices for A
<i>ip</i>	:I: array of row pointers for P
<i>jp</i>	:I: array of column indices for P
<i>nin</i>	:I: number of rows in R
<i>ncin</i>	:I: number of columns in R
<i>iac</i>	:O: array of row pointers for Ac
<i>jac</i>	:O: array of column indices for Ac
<i>maxrout</i>	:O: the maximum nonzeros per row for R

Note

Computes the sparsity pattern of $R*A*P$. maxrout is output and is the maximum nonzeros per row for r. On output we also have iac (if jac is null) and jac (if jac entry is not null). R is (nc,n) A is (n,n) and P is (n,nc)!

Modified by Chensong Zhang on 09/11/2012

Definition at line 514 of file sparse_util.c.

10.90.2.10 void fasp_sparse_wta_ (INT * *jw*, REAL * *w*, INT * *ia*, INT * *ja*, REAL * *a*, INT * *nwp*, INT * *map*, INT * *jv*, REAL * *v*, INT * *nvp*)

Calculate $v^t = w^t A$, where w is a sparse vector and A is sparse matrix. v is an array of dimension = number of columns in A .

Note

:I: is input :O: is output :IO: is both

Parameters

<i>jw</i>	:I: indices such that $w[jw]$ is nonzero
<i>w</i>	:I: the values of w
<i>ia</i>	:I: array of row pointers for A
<i>ja</i>	:I: array of column indices for A
<i>a</i>	:I: entries of A
<i>nwp</i>	:I: number of nonzeros in w (the length of w)
<i>map</i>	:I: number of columns in A
<i>jv</i>	:O: indices such that $v[jv]$ is nonzero
<i>v</i>	:O: the result $v^t = w^t A$
<i>nvp</i>	:I: number of nonzeros in v

Definition at line 648 of file sparse_util.c.

10.90.2.11 void fasp_sparse_wtams_ (INT * *jw*, INT * *ia*, INT * *ja*, INT * *nwp*, INT * *map*, INT * *jv*, INT * *nvp*, INT * *icp*)

Finds the nonzeros in the result of $v^t = w^t A$, where w is a sparse vector and A is sparse matrix. jv is an integer array containing the indices of the nonzero elements in the result.

:I: is input :O: is output :IO: is both

Parameters

<i>jw</i>	:I: indices such that $w[jw]$ is nonzero
<i>ia</i>	:I: array of row pointers for A
<i>ja</i>	:I: array of column indices for A
<i>nwp</i>	:I: number of nonzeros in w (the length of w)
<i>map</i>	:I: number of columns in A
<i>jv</i>	:O: indices such that $v[jv]$ is nonzero
<i>nvp</i>	:I: number of nonzeros in v
<i>icp</i>	:IO: is a working array of length $(*map)$ which on output satisfies $icp[jv[k]-1]=k$; Values of $icp[]$ at positions * other than $(jv[k]-1)$ remain unchanged.

Modified by Chensong Zhang on 09/11/2012

10.90.2.12 void fasp_sparse_ytx_ (INT * *jy*, REAL * *y*, INT * *jx*, REAL * *x*, INT * *nyp*, INT * *nxp*, INT * *icp*, REAL * *s*)

Calculates $s = y^t x$. y is sparse, x is sparse.

note :I: is input :O: is output :IO: is both

Parameters

<i>jy</i>	:l: indices such that $y[jy]$ is nonzero
<i>y</i>	:l: is a sparse vector.
<i>nyp</i>	:l: number of nonzeros in <i>y</i>
<i>jx</i>	:l: indices such that $x[jx]$ is nonzero
<i>x</i>	:l: is a sparse vector.
<i>nxp</i>	:l: number of nonzeros in <i>x</i>
<i>icp</i>	???
<i>s</i>	:O: $s = y^t x$.

Definition at line 733 of file sparse_util.c.

10.90.2.13 void fasp_sparse_ytxbig_ (INT * *jy*, REAL * *y*, INT * *nyp*, REAL * *x*, REAL * *s*)

Calculates $s = y^t x$. *y*-sparse, *x* - no.

Note

:l: is input :O: is output :lO: is both

Parameters

<i>jy</i>	:l: indices such that $y[jy]$ is nonzero
<i>y</i>	:l: is a sparse vector.
<i>nyp</i>	:l: number of nonzeros in <i>y</i>
<i>x</i>	:l: also a vector assumed to have entry for any $j=jy[i]-1$; for $i=1:nyp$. This means that <i>x</i> here does not have to be sparse.
<i>s</i>	:O: $s = y^t x$.

10.91.1 Detailed Description

Krylov subspace methods – Preconditioned BiCGstab with safety net.

Abstract algorithm

PBiCGstab method to solve $A*x=b$ is to generate $\{x_k\}$ to approximate x

Note: We generate a series of $\{p_k\}$ such that $V_k = \text{span}\{p_1, \dots, p_k\}$.

Step 0. Given A, b, x_0, M

Step 1. Compute residual $r_0 = b - A*x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1}*r_0, p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:\text{MaxIt}$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha*p_k$;
- check whether x is NAN;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha*(A*p_k)$;
- if $r_{k+1} < r_{\text{best}}$: save x_{k+1} as x_{best} ;
- perform residual check;
- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k -th iteration; END FOR

Convergence check: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check:

- IF $\text{norm}(\alpha*p_k)/\text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A*x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check:

- IF $\text{norm}(r_{k+1})/\text{norm}(b) < \text{tol}$

1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

safety net check:

- IF $r_{k+1} > r_{\text{best}}$
 1. $x_{k+1} = x_{\text{best}}$
- END IF

10.94.1 Detailed Description

Krylov subspace methods – Preconditioned minimal residual with safety net.

Abstract algorithm

Krylov method to solve $Ax=b$ is to generate $\{x_k\}$ to approximate x , where x_k is the optimal solution in Krylov space

$V_k = \text{span}\{r_0, A*r_0, A^2*r_0, \dots, A^{k-1}*r_0\}$,

under some inner product.

For the implementation, we generate a series of $\{p_k\}$ such that $V_k = \text{span}\{p_1, \dots, p_k\}$. Details:

Step 0. Given A , b , x_0 , M

Step 1. Compute residual $r_0 = b - A*x_0$ and convergence check;

Step 2. Initialization $z_0 = M^{-1}*r_0$, $p_0 = z_0$;

Step 3. Main loop ...

FOR $k = 0:\text{MaxIt}$

- get step size $\alpha = f(r_k, z_k, p_k)$;
- update solution: $x_{k+1} = x_k + \alpha*p_k$;
- check whether x is NAN;
- perform stagnation check;
- update residual: $r_{k+1} = r_k - \alpha*(A*p_k)$;
- if $r_{k+1} < r_{\text{best}}$: save x_{k+1} as x_{best} ;
- perform residual check;

- obtain p_{k+1} using $\{p_0, p_1, \dots, p_k\}$;
- prepare for next iteration;
- print the result of k-th iteration; END FOR

Convergence check: $\text{norm}(r)/\text{norm}(b) < \text{tol}$

Stagnation check:

- IF $\text{norm}(\alpha * p_k) / \text{norm}(x_{k+1}) < \text{tol_stag}$
 1. compute $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Stag_Check) restart;
- END IF

Residual check:

- IF $\text{norm}(r_{k+1}) / \text{norm}(b) < \text{tol}$
 1. compute the real residual $r = b - A * x_{k+1}$;
 2. convergence check;
 3. IF (not converged & restart_number < Max_Res_Check) restart;
- END IF

safety net check:

- IF $r_{k+1} > r_{\text{best}}$
 1. $x_{k+1} = x_{\text{best}}$
- END IF

Note

Krylov subspace methods – Preconditioned variable-restart GMRes with safety net.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
#include "itsolver_util.inl"
```

Functions

- [INT fasp_solver_dcsr_spvgmres](#) ([dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, const [REAL](#) tol, const [INT](#) MaxIt, [SHORT](#) restart, const [SHORT](#) stop_type, const [SHORT](#) prtlvl)
Solve "Ax=b" using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.
- [INT fasp_solver_bdcsr_spvgmres](#) ([block_dCSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, const [REAL](#) tol, const [INT](#) MaxIt, [SHORT](#) restart, const [SHORT](#) stop_type, const [SHORT](#) prtlvl)
Preconditioned GMRES method for solving Au=b.
- [INT fasp_solver_dbsr_spvgmres](#) ([dBSRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, const [REAL](#) tol, const [INT](#) MaxIt, [SHORT](#) restart, const [SHORT](#) stop_type, const [SHORT](#) prtlvl)
Solve "Ax=b" using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.
- [INT fasp_solver_dstr_spvgmres](#) ([dSTRmat](#) *A, [dvector](#) *b, [dvector](#) *x, [precond](#) *pc, const [REAL](#) tol, const [INT](#) MaxIt, [SHORT](#) restart, const [SHORT](#) stop_type, const [SHORT](#) prtlvl)
Solve "Ax=b" using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.

10.95.1 Detailed Description

Krylov subspace methods – Preconditioned variable-restart GMRes with safety net.

Note

Refer to A.H. Baker, E.R. Jessup, and Tz.V. Kolev A Simple Strategy for Varying the Restart Parameter in GMRES(m) Journal of Computational and Applied Mathematics, 230 (2009) pp. 751-761. UCRL-JRNL-235266.
See [pvgmres.c](#) a version without safety net

10.95.2 Function Documentation

10.95.2.1 **INT fasp_solver_bdcsr_spvgmres (block_dCSRmat * *A*, dvector * *b*, dvector * *x*, precondition * *pc*, const REAL *tol*, const INT *MaxIt*, SHORT *restart*, const SHORT *stop_type*, const SHORT *prtlvl*)**

Preconditioned GMRES method for solving $Au=b$.

Parameters

<i>A</i>	Pointer to block_dCSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>pc</i>	Pointer to the structure of precondition (precond)
<i>tol</i>	Tolerance for stopping
<i>MaxIt</i>	Maximal number of iterations
<i>restart</i>	Restarting steps
<i>stop_type</i>	Stopping criteria type
<i>prtlvl</i>	How much information to print out

Returns

Iteration number if converges; ERROR otherwise.

Author

Chensong Zhang

Date

04/06/2013

Definition at line 425 of file spvgmres.c.

10.95.2.2 **INT fasp_solver_dbsr_spvgmres (dBSRmat * *A*, dvector * *b*, dvector * *x*, precondition * *pc*, const REAL *tol*, const INT *MaxIt*, SHORT *restart*, const SHORT *stop_type*, const SHORT *prtlvl*)**

Solve " $Ax=b$ " using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.

Parameters

<i>A</i>	Pointer to dBSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>pc</i>	Pointer to the structure of precondition (precond)
<i>tol</i>	Tolerance for stopping
<i>MaxIt</i>	Maximal number of iterations
<i>restart</i>	Restarting steps
<i>stop_type</i>	Stopping criteria type
<i>prtlvl</i>	How much information to print out

Returns

Iteration number if converges; ERROR otherwise.

Author

Chensong Zhang

Date

04/06/2013

Definition at line 803 of file spvgmres.c.

10.95.2.3 `INT fasp_solver_dcsr_spvgmres (dCSRmat * A, dvector * b, dvector * x, precondition * pc, const REAL tol, const INT MaxIt, SHORT restart, const SHORT stop_type, const SHORT prtlvl)`

Solve " $Ax=b$ " using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.

Parameters

<i>A</i>	Pointer to dCSRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>pc</i>	Pointer to the structure of precondition (precond)
<i>tol</i>	Tolerance for stopping
<i>MaxIt</i>	Maximal number of iterations
<i>restart</i>	Restarting steps
<i>stop_type</i>	Stopping criteria type
<i>prtlvl</i>	How much information to print out

Returns

Iteration number if converges; ERROR otherwise.

Author

Chensong Zhang

Date

04/06/2013 Modified by Chunsheng Feng on 07/22/2013: Add adapt memory allocate

Definition at line 48 of file spvgmres.c.

10.95.2.4 **INT** fasp_solver_dstr_spgvmres (**dSTRmat** * *A*, **dvector** * *b*, **dvector** * *x*, **precond** * *pc*, **const REAL** *tol*, **const INT** *MaxIt*, **SHORT** *restart*, **const SHORT** *stop_type*, **const SHORT** *prtlvl*)

Solve "Ax=b" using PGMRES(right preconditioned) iterative method in which the restart parameter can be adaptively modified during the iteration.

Parameters

<i>A</i>	Pointer to dSTRmat : the coefficient matrix
<i>b</i>	Pointer to dvector: the right hand side
<i>x</i>	Pointer to dvector: the unknowns
<i>pc</i>	Pointer to the structure of precondition (precond)
<i>tol</i>	Tolerance for stopping
<i>MaxIt</i>	Maximal number of iterations
<i>restart</i>	Restarting steps
<i>stop_type</i>	Stopping criteria type
<i>prtlvl</i>	How much information to print out

Returns

Iteration number if converges; ERROR otherwise.

10.96 threads.c File Reference

Get and set number of threads and assign work load for each thread.

```
#include <stdio.h>
#include <stdlib.h>
#include "fasp.h"
```

Functions

- void [FASP_GET_START_END](#) (**INT** procid, **INT** nprocs, **INT** n, **INT** *start, **INT** *end)
Assign Load to each thread.
- void [fasp_set_GS_threads](#) (**INT** mythreads, **INT** its)
Set threads for CPR. Please add it at the begin of Krylov OpenMP method function and after iter++.

Variables

- [INT THDs_AMG_GS](#) =0
- [INT THDs_CPR_IGS](#) =0
- [INT THDs_CPR_gGS](#) =0

10.96.1 Detailed Description

Get and set number of threads and assign work load for each thread.

10.96.2 Function Documentation

10.96.2.1 void FASP_GET_START_END (INT *procid*, INT *nprocs*, INT *n*, INT * *start*, INT * *end*)

Assign Load to each thread.

Parameters

<i>procid</i>	Index of thread
<i>nprocs</i>	Number of threads
<i>n</i>	Total workload
<i>start</i>	Pointer to the begin of each thread in total workload
<i>end</i>	Pointer to the end of each thread in total workload

Author

Chunsheng Feng, Xiaoqiang Yue and Zheng Li

Date

June/25/2012

Definition at line 83 of file threads.c.

10.96.2.2 void fasp_set_GS_threads (INT *threads*, INT *its*)

Set threads for CPR. Please add it at the begin of Krylov OpenMP method function and after iter++.

Parameters

<i>threads</i>	Total threads of solver
<i>its</i>	Current its of the Krylov methods

Author

Feng Chunsheng, Yue Xiaoqiang

Date

03/20/2011

10.97 timing.c File Reference

Timing subroutines.

```
#include <time.h>
#include "fasp.h"
```

Functions

- void [fasp_gettime](#) (REAL *time)
Get system time.

10.97.1 Detailed Description

Timing subroutines.

10.97.2 Function Documentation

10.97.2.1 fasp_gettime (REAL * time)

Get system time.

Author

Chunsheng Feng, Zheng LI

Date

11/10/2012

Modified by Chensong Zhang on 09/22/2014: Use CLOCKS_PER_SEC for cross-platform

Definition at line 28 of file timing.c.

10.98 vec.c File Reference

Simple operations for vectors.

```
#include <math.h>
#include "fasp.h"
#include "fasp_functs.h"
```

Functions

- `INT fasp_dvec_isnan (dvector *u)`
Check a dvector whether there is NAN.
- `dvector fasp_dvec_create (const INT m)`
Create dvector data space of REAL type.
- `ivector fasp_ivec_create (const INT m)`
Create vector data space of INT type.
- `void fasp_dvec_alloc (const INT m, dvector *u)`
Create dvector data space of REAL type.
- `void fasp_ivec_alloc (const INT m, ivector *u)`
Create vector data space of INT type.
- `void fasp_dvec_free (dvector *u)`
Free vector data space of REAL type.
- `void fasp_ivec_free (ivector *u)`
Free vector data space of INT type.
- `void fasp_dvec_null (dvector *x)`
Initialize dvector.
- `void fasp_dvec_rand (const INT n, dvector *x)`
Generate random REAL vector in the range from 0 to 1.
- `void fasp_dvec_set (INT n, dvector *x, REAL val)`
Initialize dvector $x[i]=val$ for $i=0:n-1$.
- `void fasp_ivec_set (const INT m, ivector *u)`
Set ivector value to be m.
- `void fasp_dvec_cp (dvector *x, dvector *y)`
Copy dvector x to dvector y.
- `REAL fasp_dvec_maxdiff (dvector *x, dvector *y)`
Maximal difference of two dvector x and y.
- `void fasp_dvec_symdiagscale (dvector *b, dvector *diag)`
Symmetric diagonal scaling $D^{-1/2}b$.

10.98.1 Detailed Description

Simple operations for vectors.

Note

All structures should be initialized before usage.

10.98.2 Function Documentation

10.98.2.1 void fasp_dvec_alloc (const INT *m*, dvector * *u*)

Create dvector data space of REAL type.

Parameters

m	Number of rows
u	Pointer to dvector (OUTPUT)

Author

Chensong Zhang

Date

2010/04/06

Definition at line 99 of file vec.c.

10.98.2.2 `void fasp_dvec_cp (dvector * x, dvector * y)`

Copy dvector x to dvector y.

Parameters

x	Pointer to dvector
y	Pointer to dvector (MODIFIED)

Author

Chensong Zhang

Date

11/16/2009

Definition at line 345 of file vec.c.

10.98.2.3 `dvector fasp_dvec_create (const INT m)`

Create dvector data space of REAL type.

Parameters

m	Number of rows
-----	----------------

Returns

u The new dvector

Author

Chensong Zhang

Date

2010/04/06

Definition at line 56 of file vec.c.

10.98.2.4 void fasp_dvec_free (dvector * *u*)

Free vector data space of REAL type.

Parameters

u	Pointer to dvector which needs to be deallocated
-----	--

Author

Chensong Zhang

Date

2010/04/03

Definition at line 139 of file vec.c.

10.98.2.5 INT fasp_dvec_isnan (dvector * u)

Check a dvector whether there is NAN.

Parameters

u	Pointer to dvector
-----	--------------------

Returns

Return TRUE if there is NAN

Author

Chensong Zhang

Date

2013/03/31

Definition at line 33 of file vec.c.

10.98.2.6 REAL fasp_dvec_maxdiff (dvector * x , dvector * y)

Maximal difference of two dvector x and y .

Parameters

x	Pointer to dvector
y	Pointer to dvector

Returns

Maximal norm of $x-y$

Author

Chensong Zhang

Date

11/16/2009

Modified by chunsheng Feng, Zheng Li

Date

06/30/2012

Definition at line 368 of file vec.c.

10.98.2.7 void fasp_dvec_null (dvector * x)

Initialize dvector.

Parameters

<i>x</i>	Pointer to dvector which needs to be initialized
----------	--

Author

Chensong Zhang

Date

2010/04/03

Definition at line 177 of file vec.c.

10.98.2.8 void fasp_dvec_rand (const INT *n*, dvector * *x*)

Generate random REAL vector in the range from 0 to 1.

Parameters

<i>n</i>	Size of the vector
<i>x</i>	Pointer to dvector

Note

Sample usage:

```
dvector xapp;
```

```
fasp_dvec_create(100,&xapp);
```

```
fasp_dvec_rand(100,&xapp);
```

```
fasp_dvec_print(100,&xapp);
```

Author

Chensong Zhang

Date

11/16/2009

Definition at line 203 of file vec.c.

10.98.2.9 void fasp_dvec_set (INT *n*, dvector * *x*, REAL *val*)Initialize dvector $x[i]=val$ for $i=0:n-1$.**Parameters**

<i>n</i>	Number of variables
<i>x</i>	Pointer to dvector
<i>val</i>	Initial value for the vector

Author

Chensong Zhang

Date

11/16/2009

Modified by Chunsheng Feng, Xiaoqiang Yue on 05/23/2012

Definition at line 235 of file vec.c.

10.98.2.10 void fasp_dvec_symdiagscale (dvector * *b*, dvector * *diag*)Symmetric diagonal scaling $D^{-1/2}b$.**Parameters**

<i>b</i>	Pointer to dvector
<i>diag</i>	Pointer to dvector: the diagonal entries

Author

Xiaozhe Hu

Date

01/31/2011

Definition at line 421 of file vec.c.

10.98.2.11 void fasp_ivec_alloc (const INT *m*, ivector * *u*)

Create vector data space of INT type.

Parameters

m	Number of rows
u	Pointer to ivector (OUTPUT)

Author

Chensong Zhang

Date

2010/04/06

Definition at line 119 of file vec.c.

10.98.2.12 ivector fasp_ivec_create (const INT m)

Create vector data space of INT type.

Parameters

m	Number of rows
-----	----------------

Returns

u The new ivector

Author

Chensong Zhang

Date

2010/04/06

Definition at line 78 of file vec.c.

10.98.2.13 void fasp_ivec_free (ivector * u)

Free vector data space of INT type.

Parameters

u	Pointer to ivector which needs to be deallocated
-----	--

Author

Chensong Zhang

Date

2010/04/03

Note

This function is same as fasp_dvec_free except input type.

Definition at line 159 of file vec.c.

10.98.2.14 void fasp_ivec_set (const INT *m*, ivector * *u*)

Set ivector value to be *m*.

Parameters

<i>m</i>	Integer value of ivector
<i>u</i>	Pointer to ivector (MODIFIED)

Author

Chensong Zhang

Date

04/03/2010

Modified by Chunsheng Feng, Xiaoqiang Yue

Date

05/23/2012

Definition at line 304 of file vec.c.

10.99 wrapper.c File Reference

Wrappers for accessing functions by advanced users.

```
#include "fasp.h"
#include "fasp_block.h"
#include "fasp_functs.h"
```

Functions

- void [fasp_fwrapper_amg_](#) (INT **n*, INT **nnz*, INT **ia*, INT **ja*, REAL **a*, REAL **b*, REAL **u*, REAL **tol*, INT **maxit*, INT **ptrlvl*)
Solve $Ax=b$ by Ruge and Stuben's classic AMG.
- void [fasp_fwrapper_krylov_amg_](#) (INT **n*, INT **nnz*, INT **ia*, INT **ja*, REAL **a*, REAL **b*, REAL **u*, REAL **tol*, INT **maxit*, INT **ptrlvl*)
Solve $Ax=b$ by Krylov method preconditioned by classic AMG.
- INT [fasp_wrapper_dbsr_krylov_amg](#) (INT *n*, INT *nnz*, INT *nb*, INT **ia*, INT **ja*, REAL **a*, REAL **b*, REAL **u*, REAL *tol*, INT *maxit*, INT *ptrlvl*)
Solve $Ax=b$ by Krylov method preconditioned by AMG (dcsr -> dbsr)
- INT [fasp_wrapper_dcoo_dbsr_krylov_amg](#) (INT *n*, INT *nnz*, INT *nb*, INT **ia*, INT **ja*, REAL **a*, REAL **b*, REAL **u*, REAL *tol*, INT *maxit*, INT *ptrlvl*)
Solve $Ax=b$ by Krylov method preconditioned by AMG (dcoo -> dbsr)

10.99.1 Detailed Description

Wrappers for accessing functions by advanced users.

10.99.2 Function Documentation

10.99.2.1 `void fasp_fwrapper_amg_ (INT * n, INT * nnz, INT * ia, INT * ja, REAL * a, REAL * b, REAL * u, REAL * tol, INT * maxit, INT * ptrlvl)`

Solve $Ax=b$ by Ruge and Stuben's classic AMG.

Parameters

<i>n</i>	Number of cols of A
<i>nnz</i>	Number of nonzeros of A
<i>ia</i>	IA of A in CSR format
<i>ja</i>	JA of A in CSR format
<i>a</i>	VAL of A in CSR format
<i>b</i>	RHS vector
<i>u</i>	Solution vector
<i>tol</i>	Tolerance for iterative solvers
<i>maxit</i>	Max number of iterations
<i>ptrlvl</i>	Print level for iterative solvers

Author

Chensong Zhang

Date

09/16/2010

Definition at line 35 of file wrapper.c.

10.99.2.2 `void fasp_fwrapper_krylov_amg_ (INT * n, INT * nnz, INT * ia, INT * ja, REAL * a, REAL * b, REAL * u, REAL * tol, INT * maxit, INT * ptrlvl)`

Solve $Ax=b$ by Krylov method preconditioned by classic AMG.

Parameters

<i>n</i>	Number of cols of A
<i>nnz</i>	Number of nonzeros of A
<i>ia</i>	IA of A in CSR format
<i>ja</i>	JA of A in CSR format
<i>a</i>	VAL of A in CSR format
<i>b</i>	RHS vector
<i>u</i>	Solution vector
<i>tol</i>	Tolerance for iterative solvers
<i>maxit</i>	Max number of iterations
<i>ptrlvl</i>	Print level for iterative solvers

Author

Chensong Zhang

Date

09/16/2010

Definition at line 85 of file wrapper.c.

10.99.2.3 **INT** fasp_wrapper_dbsr_krylov_amg (**INT** *n*, **INT** *nnz*, **INT** *nb*, **INT** * *ia*, **INT** * *ja*, **REAL** * *a*, **REAL** * *b*, **REAL** * *u*, **REAL** *tol*, **INT** *maxit*, **INT** *ptrlvl*)

Solve $Ax=b$ by Krylov method preconditioned by AMG (dcsr - > dbsr)

Parameters

<i>n</i>	Number of cols of A
<i>nnz</i>	Number of nonzeros of A
<i>nb</i>	Size of each small block
<i>ia</i>	IA of A in CSR format
<i>ja</i>	JA of A in CSR format
<i>a</i>	VAL of A in CSR format
<i>b</i>	RHS vector
<i>u</i>	Solution vector
<i>tol</i>	Tolerance for iterative solvers
<i>maxit</i>	Max number of iterations
<i>ptrlvl</i>	Print level for iterative solvers

Returns

Iteration number if converges; ERROR otherwise.
